The Marrakesh Treaty

STUDY FOR THE PETI COMMITTEE

EN 2016
Abstract

This study, commissioned by the European Parliament Policy Department for Citizens’ Rights and Constitutional Affairs upon request by the PETI Committee, provides an analysis of the Marrakesh Treaty to Facilitate Access to Copyright Works for the Blind or Print-Disabled. It explains the background and movements that led to its proposal, negotiation and successful adoption. It then considers the Treaty’s current situation in relation to its content and issues around its ratification, particularly by the EU. It finally examines future developments around copyright reform and makes recommendations to EU institutions and Member States.
ABOUT THE PUBLICATION

This research paper was requested by the European Parliament's Committee on Petitions and was commissioned, overseen and published by the Policy Department for Citizens’ Rights and Constitutional Affairs.

Policy departments provide independent expertise, both in-house and externally, to support European Parliament committees and other parliamentary bodies in shaping legislation and exercising democratic scrutiny over EU external and internal policies.

EXECUTIVE SUMMARY

The rights of everyone to full participation in culture and to enjoy the benefits of scientific progress are acknowledged in the Universal Declaration of Human Rights and the International Covenant on Economic, Social and Cultural Rights. The United Nations Convention on the Rights of Persons with Disabilities (CRPD) is an international treaty that establishes the equality of their human rights with other citizens. The EU is a party to this treaty, along with almost all its Member States. The rights of persons with disabilities are also acknowledged in the Charter of Fundamental Rights and in the Treaty of European Union. Up to one quarter of the European electorate declare some degree of impairment or disability, forming a significant constituency of public interest. The CRPD establishes the right of all disabled people to have access to information in accessible formats and technologies on an equal basis and without discrimination. It also establishes the right to take part in cultural life and have access to cultural materials on an equal basis. There is thus an international recognition that disabled people, including visually impaired and print-disabled, have a right to read. To achieve its aims, the CRPD imposes an obligation on states to take appropriate measures to ensure, in accordance with international law, that intellectual property rights, such as copyright protection, do not constitute an unreasonable or discriminatory barrier to access by persons with disabilities to cultural materials. Removing copyright barriers and increasing access to knowledge and information is at heart of the Marrakesh Treaty for the benefit of the blind and print-disabled.

Whilst most countries may have some disability exception to copyright infringement of some sort, the need for an international instrument allowing for the cross-border distribution of accessible format copies was identified as far back as the 1980s. Beyond proposals and studies, however, no concrete action was taken. In the meantime, the global book famine for the print-disabled continued to grow even as technological advances made it increasingly easier for sighted people to access a wider range of knowledge goods. As international trade agreements such as the TRIPs Agreement began to harmonise and prescribe minimum levels of intellectual property protection across the world to the same levels as those in developed economies, developing countries found themselves increasingly raising the prescribed minimum standards in order to offer higher levels of protection without regard to their economic needs, social development and human rights obligations. Soon the agendas of developing countries pushing for a change in the culture at international norm-setting bodies like WIPO, the agendas of knowledge rights activities calling for broader user rights and the agendas of human rights/disabilities activists converged and culminated in a proposal for a more inclusive and pluralistic development agenda at WIPO. The WIPO development agenda represented a significant shift from expansive rights to a more development-orientated approach to international law-making. It was at this point that a proposal for binding treaty to address the book famine was taken seriously and, after four years of intensive negotiations, resulted in the historic miracle at Marrakesh, ie the Marrakesh Treaty. The exceptional character of the Treaty, which combines human rights/disability law and intellectual property, creates for the first mandatory exceptions and limitation to copyright protection to increase access to books (and other materials) as well as their international distribution across members of the Treaty.

History was made when 20 countries ratified the Marrakesh Treaty, which came into force in September 2016. Unfortunately, despite undertaking a political commitment when signing it, the EU has yet to ratify and implement the Marrakesh exceptions. Questionable arguments about the substantive legal basis for ratification and the proper nature of the competence (whether exclusive of the Union or shared with the Member States) has resulted in a deadlock and delays. In the light of the Opinion of the Advocate General issued as a
result of a request to the Court of Justice of the EU, this study examines the current situation and finds the arguments against EU ratification simply wanting. Furthermore, the Commission’s proposals for a Directive and the Regulation are examined, highlighting important strengths and some potential weaknesses. As the Marrakesh ratification by the EU has been bundled up with the overdue reforms of the copyright framework, there is some analysis into these developments which are not necessary to proceed with ratification. The final part makes some modest proposals and recommendations for the Parliament/PETI, the Commission and the Member States.
INTRODUCTION

Hailed as an historic shift in the international culture of intellectual property norm-setting,¹ the Marrakesh Treaty to Facilitate Access to Published Works for Persons Who Are Blind, Visually Impaired, or Otherwise Print Disabled (Marrakesh Treaty) was adopted in 2013 at the World Intellectual Property Organisation (WIPO) with the stated aim of facilitating the availability and cross-border exchange of books and other print material in accessible formats around the world. It was signed by the European Union (EU) in April 2014² but due to institutional difficulties its ratification, as of the time of writing, remains pending. Despite absence of EU ratification, the Marrakesh Treaty became a reality following the ratification by twenty signatory countries and entered into force on 30th September 2016.³ With the exception of Canada and Australia, most of the 24 members of the Treaty are developing countries and more need to join to ensure an end to the ‘book famine’ for visually impaired people (VIPs), ie the striking disparity between the number of books published per country per year and the actual number that are converted into accessible format. There is in particular urgent need for countries that are major producers of special format books to join, ie the United States and the EU –their unfortunate stance towards ratification seemingly underscores their initial appetite for a non-binding, soft law alternative conveyed in their proposals leading up to Marrakesh. The Treaty requires the parties to provide exceptions or limitations to copyright and related rights for the benefit of VIPs, ‘a critically underserved population within the global copyright market’, by allowing for the cross-border exchange of special format copies, including audio books, and other print material among the member countries. The availability of books in formats that are available to print-disabled persons is estimated between 7% and 20% out of an estimated 2.2. millions of books published per country per year, leaving the more than 314 million blind and visually impaired people in the world in a state of ‘book famine’. Accessible formats include, but are not limited to, Braille, large print, ebooks and audio books with special navigation, audio description and radio broadcasts.

As a result of deep institutional disagreements over the nature and legal basis of the competence to ratify the Marrakesh Treaty, the Commission requested clarification from the CJEU of whether or not the EU has exclusive competence to conclude the Treaty and the proper legal basis for ratification. On 8th September 2016, the Opinion of Advocate General (AG) Wahl was published taking the view that the EU has exclusive competence on this matter and the decision to conclude the Marrakesh Treaty ought to have a dual basis: Articles 19(1) and 207 TFEU.⁴ The choice of the dual basis follows from objective factors, namely the aim and content of the measure. In this case, the AG viewed the Treaty as pursuing the goals of combating discrimination based upon disability pursuant to Art.19(1) TFEU and cross-border trade of accessible format copies implicating the common commercial policy pursuant to Art.207 TFEU. One of the basis the AG discarded was Art.114 TFEU as the improvement of the internal market conditions vis-à-vis the disability exception under the Information Society Directive is not the predominant purpose of Marrakesh. Notwithstanding the fact that the CJEU has yet to offer its Opinion, on 14th September 2016 the Commission published a

⁴ A-3/15 Opinion Procedure CJEU [8 September 2016], Opinion of AG Wahl
proposal for a Directive\(^5\) and another for a Regulation\(^6\) in order to bring Union law in line with the EU’s international commitments under Marrakesh. Whilst the Directive requires Member States to introduce mandatory exceptions to certain rights harmonised under Union law and to ensure cross-border access to special format copies within the internal market, the Regulation seeks to lay down the conditions for the export and import of accessible format copies between the Union and third countries that are parties to the Marrakesh Treaty. The legal basis for these EU proposals follow very closely those indicated in the Opinion of the AG.

1. HISTORY: THE ROAD TO MARRAKESH

KEY FINDINGS

- The need for a mandatory disability exception to copyright that permits the international distribution of accessible books was identified at least as far back as the 1980s.

- The adoption of the UN Convention on the Rights of Persons with Disabilities (CRPD) in 2006 recognised that intellectual property (IP) rights (including copyright) can act as discriminatory barriers to the right of people with disabilities to read. The CRPD thus created an international obligation on states to take steps to remove such barriers.

- The Development Agenda promoted by developing countries and human rights activists helped to change the culture at the World Intellectual Property Organisation (WIPO).

- The reaction to international trade agreements, such as the TRIPs Agreement, provided the space for the intersection between human rights/disability rights and IP.

- UN bodies began to pay increased attention to IP and human rights through General Comments. Thus, IP and human rights (including disability rights) rose to the international agenda.

1.1. Studies and reports by WIPO and UNESCO

Those tracking the historical events leading up to the negotiations that culminated in the Marrakesh Treaty point to the studies and reports published in the 1980s under the auspices of WIPO and UNESCO highlighting concerns about the lack of a mechanism to facilitate access by VIPs to copyright works, none of which sparked significant international interest for several years. For instance, a 1985 report prepared for WIPO identified two key issues as representing barriers to access for persons with disabilities: a) the lack of an exception or limitation in domestic laws that would permit the reproduction of works to make them accessible, and b) the absence of a mechanism to distribute accessible works across borders once they were made. These concerns were not taken forward but the argument that an international treaty could solve these problems began to emerge. Against this background, similar concerns were raised in further studies and reports that were prepared in response to the 'disability agenda' that had reached the international copyright-policy making stage in the early 1980s.

Yet crucial for the disability/copyright agenda to rise once more at WIPO was the momentous adoption of the UNCRPD in 2006. The CRPD reaffirmed that persons with all types of disabilities must enjoy all human rights and fundamental freedoms, namely the freedom to receive information and ideas on an equal basis with others and the through all forms of communication. The following year, WIPO published the Sullivan Report on ‘Copyright Limitations and Exceptions for the Visually Impaired’ which described in detail the diverse nature of limitations and exceptions for the visually impaired in national copyright laws.

In concluding that the framework in international treaties and conventions relating to IP permit exceptions for the benefit of VIPs, the Sullivan Report highlighted that such exceptions were neither directly addressed nor mandatory under these treaties and conventions and, referring to the then draft of the UNCRPD, stated that pursuant to Art.30(3) it would no longer be merely an option to take into account the needs of VIPs. In fact, Art.30(3) of the UNCRPD is the first international treaty specifically to mention that intellectual property rights, including copyright, may act as unreasonable or discriminatory barriers for persons with disabilities to access cultural materials in accessible formats. Cultural materials’ are not limited to print books but may broadly include ‘literature, artefacts, radio, screen and television productions, performance and visual arts.’ Under Art.30(3), the CRPD entrenches the right of people with disabilities to take part in cultural life on an equal basis with others as a human right in international law, as first recognised as a binding norm in Art.15 of the International Covenant on Economic, Social and Cultural Rights (ICESCR or the Covenant) which came into force in 1976.

WIPO’s evolving agenda played a key role in these international efforts to address the social needs of VIPs within the human rights and copyright spheres. In 2004, WIPO launched its Development Agenda in the form of ‘an ambitious document that call[ed] for WIPO to revisit its mandate and shift from its traditional emphasis on promotion and expansion of intellectual property rights towards a more development-orientated approach.’ After several meetings held in 2005, WIPO agreed to adopt Brazil and Argentina’s Proposal to Establish a Development Agenda which many believed was a long overdue step forward that would ‘profoundly refashion the WIPO agenda toward development and new approaches to support innovation and creativity.’ By 2007, WIPO’s development agenda was formally established. As part of this development agenda, the WIPO General Assembly adopted a set of forty-five recommendations to enhance the development dimensions in all of the institution’s activities and adjust its activities to the specific needs of developing countries, presenting the recommendations into six clusters with the most relevant ones regarding access to knowledge in Cluster B (norm-setting, flexibilities, public policy, and public domain) and Cluster C (technology transfer, information and communication technologies, and access to

14 H Harpur and N Suzor, ‘Copyright Protections and Disability Rights: Turning the Page to New International Paradigm (2013) 3 UNSWLJ 745, 760
knowledge). The importance of the WIPO development agenda cannot be underestimated. Some observed that ‘its shift in purpose and responsibility means that the institution must pay attention to issues beyond protection of the interests of private rights holders, such as the access needs of people with sensory disabilities, as well as the needs of those facing social, cultural, and educational challenges in developing countries.’

The social and development dimension to WIPO’s norm-setting activities promoted in the Development Agenda came on the back of an increasing interest that the UN human rights system began to take in IP developments in early 2000. It was the intersection between human rights and intellectual property arising in reaction to the TRIPS Agreement that provided the impetus for comprehensive work on IP issues within the UN human rights bodies. The first human rights reaction to TRIPS occurred in the form of a resolution in August 2000 by the Sub-Commission on Human Rights noting that ‘actual or potential conflicts exist between the implementation of the TRIPS Agreement and the realisation of economic, social and cultural rights.’ In the view of the Sub-Commission, TRIPS does not adequately reflect the fundamental nature and indivisibility of all human rights, including the right of everyone to enjoy the benefits of scientific progress. In clear antagonistic language, the resolution stated that ‘there are apparent conflicts between the intellectual property rights regime embodied in the TRIPS Agreement, on the one hand, and international human rights law, on the other.’ In resolving these conflicts, it urged all national governments to ensure ‘the primacy of human rights obligations over economic policies and agreements.’

1.2. Activities of the Committee on Economic, Social and Cultural Rights: General Comments No. 17, 5 and 21

The same year the Committee on Economic, Social, and Cultural Rights published a background study on the Drafting History of Art.15(1)(c) of the ICESCR, which tracks closely the wording of Art.27(2) of the Universal Declaration on Human Rights (UDHR), throwing some light on what had hitherto been described as ‘neglected’ provisions that provide ‘the starting point for a human rights analysis of TRIPS.’ The study identified an internal ‘unresolved tension’ arising from the pairing of the right of everyone to ‘benefit from the advances of science’ with the right of the author to ‘material and moral interests’ within Art.15 but found little discussion in the drafting history on the difficult balance between ‘public needs and private rights when it comes to intellectual property.’ Though the drafters appeared to have focussed almost exclusively on ‘authors as individuals’ rather than...
corporations or copyright owners, the study surmised that a human rights analysis of the TRIPS Agreement and its progeny must mean that their intention was not to include the rights of authors in sub-section (c) as an intentional limit on the right of all to benefit in sub-section (b) of Art.15.\(^\text{28}\)

In 2001, the Committee issued a statement highlighting that the importance of IP for human rights was ‘high on the international agenda’ and setting out a new ambitious plan to draft general comments on key human rights principles derived from the ICESCR that must be taken into account in the design, interpretation and development of contemporary IP norms.\(^\text{29}\) Since then, the Committee has been ‘the progenitor of a movement to imbue [the economic, social and cultural rights in the Covenant] with greater prescriptive force.’\(^\text{30}\) Shortly after, it issued its General Comment No.17 (GC) on Art.15(1)(c) setting out the content of the right to protect the moral and material interests of authors and the nature of the international obligations on states to protect and fulfil the right of everyone to participate in cultural life and benefit from cultural and scientific progress. On the basis of foundational principles, GC No.17 rejected equating authors’ moral and material interests with the legal entitlements recognised in IP systems and, notwithstanding some commonalities between the two, made the basic assertion that the scope of the protection of authors’ rights in Art.15(1)(c) ‘does not necessarily coincide with what is referred to as intellectual property rights under national legislation or international agreements.’\(^\text{31}\) Derived from the inherent dignity and worth of all persons, the right of authors’ to benefit from moral and material interests in their works ‘seeks to encourage the active contribution of creators to the arts and sciences and to the progress of society as whole.’\(^\text{32}\) As such, the right to authorship cannot be considered in isolation since it is intrinsically linked to all the other rights envisaged in Art.15, ie the right to participate in cultural life (1)(a), the right to enjoy the benefits of scientific progress (1)(b) and the freedom of scientific research and creative activity (3). These competing rights thus exist in a symbiotic relationship in terms of being ‘at the same time mutually reinforcing and reciprocally limitative.’\(^\text{33}\)

Like all the other rights recognised in the Covenant, GC No.17 emphasises that authors’ rights are subject to limitations provided that such limitations respect the essence of the rights of authors, that is, ‘the protection of the personal link between the author and his/her creation and of the means which are necessary to enable authors to enjoy an adequate standard of living.’\(^\text{34}\) These are the core dual purposes of recognising authors’ moral and material interests as human rights, forming ‘a zone of personal autonomy’\(^\text{35}\) to enable authors to fulfil their creative potential and earn a livelihood and, at the same time, marking the limits of any government restrictions. However, protection of authorship does not imply absolute control over literary and artistic creations. Since only certain attributes of IP rights protect the author’s core zone of autonomy, legal protections beyond those needed to

\(^{35}\) L Helfer, ‘Towards a Human Rights Framework for Intellectual Property’ (n 30) 996
establish it may in some cases be desirable but are neither mandated nor subject to rigid scrutiny under Art.15 ICESCR.\textsuperscript{36}

Accordingly, beyond these core rights (one moral, the other material) additional IP protection must be balanced with the other rights recognised in the Covenant, with particular consideration to the wider public interest in access to knowledge and cultural participation.\textsuperscript{37} Yet if a state does decide to offer additional rights, the ICESCR gives it wide discretion ‘to shape them to the particular economic, social and cultural conditions within their borders.’\textsuperscript{38} Under this core minimum approach, states cannot violate the ICESCR if they reduce or modify excessive protection required under TRIPS or TRIPS-plus agreements (ie, those international agreements prescribing more extensive protection without the flexibilities of TRIPS) as long as such protection has no human rights basis.\textsuperscript{39} Others argue that this core minimum approach has significant implications for authors and inventors. It provides them with the ‘minimum essential levels of protection even in situations where states need resources to realise other human rights.’\textsuperscript{40} But when such approach is used with other human rights, ie the right to education and self-determination, ‘it creates the maximum limits of intellectual property protection that are needed but are often omitted in international treaties’ and thereby facilitates ‘creativity, innovation, and cultural participation and development.’\textsuperscript{41} This interpretation thus accords with the Committee’s view that IP is ultimately ‘a social product and has social function.’

Even though the focus of GC No.17 is largely on the basic human rights interests of authors, the Committee reminded states of their obligation to strike an adequate balance between the other interests in Art.15 by ensuring that ‘the private interests of authors should not be unduly favoured and the public interest in enjoying broad access to their products should be given due consideration.’\textsuperscript{42} Helfer’s analysis uncovers an ‘interpretative principle’ about how states can achieve balanced, human rights-compliant rules of IP protection.\textsuperscript{43} Under this interpretative principle, states must ensure that their treaty-based IP rules for protecting authors’ rights ‘constitute no impediment to their ability to comply with core obligations in relation to the rights to food, health and education, as well as to take part in cultural life and to enjoy the benefits of scientific progress and its application, or any other right enshrined in the Covenant.’\textsuperscript{44} The ultimate purpose of this balancing exercise must be ‘promoting and protecting the full range of rights guaranteed in the Covenant.’\textsuperscript{45} Furthermore, covenant-based core obligations include non-discrimination in Art.2(2) and equal enjoyment of rights by men and women in Art.3, which constitute cross-cutting obligations that apply to all rights contained in Articles 6 to 15 of the Covenant, including the right of everyone to take part in cultural life and to enjoy the benefits.\textsuperscript{46} Indeed, the nature

\item \textsuperscript{46} UN Committee on Economic, Social and Cultural Rights (CESCR), General Comment No. 16: The Equal Right of Men and Women to the Enjoyment of All Economic, Social and Cultural Rights (Art. 3 of the Covenant), 11 August 2005, E/C.12/2005/4, at 22. Available at: \url{http://www.refworld.org/docid/43f3067ae.html} [accessed 24 October 2016]; UN Committee on Economic, Social and Cultural Rights (CESCR), General comment No. 20: Non-discrimination in economic, social and cultural rights (art. 2, para. 2, of the International Covenant on Economic,}
\end{itemize}
of Articles 2(2) and Art.3 is ‘integranlly related and mutually reinforcing’ insofar as that ‘the elimination of discrimination is fundamental to the enjoyment of economic, social and cultural rights on a basis of equality.’

The principle of non-discrimination prohibits differential treatment of a person or group on the basis of his/her or their particular status relating to race, colour, sex, language, religion, political, national, social origin, birth, or ‘other status’. That catch-all term ‘other status’ covers discrimination on the grounds of disability. In its GC No.5, the Committee reviewed some of the ways in which issues concerning persons with disabilities arise in connection with the obligations under the Covenant even in the absence of a disability-related provision. It broadly defined disability-based discrimination as ‘including any distinction, exclusion, restriction or preference, or denial of reasonable accommodation based upon disability which has the effect of nullifying or impairing recognition, enjoyment or exercise of economic, social or cultural rights.’ After highlighting the fact that the effects of disability-based discrimination are particularly severe in the fields of education, employment and cultural life (all of which closely relate to the rights to science and culture), GC No.5 interpreted the right to science and culture in the Covenant as importing the same state obligation as that articulated in the Standard Rules on the Equalisation of Opportunities for Persons with Disabilities, namely to ‘ensure that persons with disabilities have the opportunity to utilise their creative, artistic and intellectual potential, not only for their own benefit, but also for the enrichment of their community…’ Of great note here is that in this 1994 General Comment the right to full cultural participation for persons with disabilities was defined as requiring that ‘communication barriers be eliminated to the greatest extent possible’ through useful measures such as the use of talking books.

50 CESCR, General Comment No. 5 (n 48). This would eventually become Art.30 (2) of the CRPD.
51 Ibid at [37]
2. THE EMPOWERMENT RIGHT OF SCIENCE AND CULTURE

KEY FINDINGS

- The key to the basic human right to science and culture is access. It is thus ‘a right of access.’
- The access dimension of this right requires accommodation of disability in order to participate on an equal basis with others in cultural life.
- Scientific knowledge, information and advances must be made available to all, without discrimination of any kind.
- The call for an international minimum core of exceptions to copyright to restore balance.

2.1 The Right to Science and Culture

The right to science and culture is thus part of the socioeconomic rights protected by the Covenant that, by definition, address ‘basic human needs essential to human survival and dignity to which all people may not have access in the absence of state assistance.’ Despite being part of interrelated provisions vindicating other interests and values, the touchstone of the right to science and culture is ‘access’. This access dimension is satisfied only when the cultural good is physically accessible to all, with accommodation of disability that includes adaptability to the particular needs of the community and individual. In 2009, the Committee published its GC No.21 on the right of everyone to take part in cultural life which it identified as being equivalent to the right to participation on an equal basis with others in cultural life in Art.30(1) of the CRPD. The right can be best characterised as a ‘freedom,’ which states should respect and fulfil on the basis of equality. The phrase ‘cultural life’ is ‘an explicit reference to culture as a living process’ which encompasses, for instance, ‘ways of life, language, oral and written literature, music, song, non-verbal communication…’ Also, the terms ‘participate’ or ‘take part’ cover three interrelated components of participation, access and contribution to cultural life. As such, the right confers the freedom upon persons with disabilities (alone or with others) not only to ‘learn about forms of expression and dissemination through any technical medium of information and communication,’ but also to be actively involved in creating ‘the spiritual, material, intellectual and emotional expressions of the community.’

The Committee thus underscored ‘accessability’ as one of the necessary elements for the full realisation of the right of everyone to science and culture that entails ‘effective and concrete opportunities for individuals and communities to enjoy culture fully...without discrimination.’ On this latter point, it specifically highlighted that access for persons with

---

53 Ibid, 171
55 Ibid at [15]
56 Ibid at [16]
disabilities must be provided and facilitated, which imposes a state obligation to take positive action to ensure access to a wide range of cultural activities such as ‘cultural material, television programmes, films, theatre and other cultural activities, in accessible forms.’\textsuperscript{57} Properly implemented, the right promotes ‘inclusive cultural empowerment’ as a tool for reducing social disparities in a democratic society.\textsuperscript{58} Yet, whilst affirming the interrelatedness of the cultural rights in Art.15 ICESCR and emphasising the intrinsic link of the right to science and culture with other human rights such as the right to education, nowhere did the Committee address the imminent role of copyright in acting as a disabling barrier for persons with disabilities seeking to exercise their right to full access to cultural materials as mandated in Art.30(3) CRPD.

Given the clear wording of the states’ duty under Art.30(3) CRPD and the Committee’s own assimilation of the right to full cultural participation in the Covenant with that in the CRPD, it was a missed opportunity not to address the issue head-on and offer guidance for states and international norm-making bodies. However, the Committee did warn states about their duty to comply with this right in negotiating international financial aid and in concluding bilateral agreements.\textsuperscript{59} In its concluding remarks, the Committee also recalled the Covenant obligations of actors other than states to ‘adopt international measures likely to contribute to the progressive implementation of Art.15(1)’, particularly reminding WIPO (and others) that, as a specialised agency of the UN, it must intensify its ‘efforts to take into account human rights principles and obligations in [its] work concerning the right of everyone to take part in cultural life...’\textsuperscript{60} This clear warning added to the mounting pressure on WIPO to adopt concrete measures to fulfil the aims of the Development Agenda.

\textbf{2.2. UN Special Rapporteur in the field of Cultural Rights}

Although the Committee has yet to articulate the normative content and scope of the ‘right of everyone to enjoy the benefits of scientific progress and its applications’ in the Covenant, it is possible to draw on the scholarship and jurisprudence developed in general comments around other socioeconomic rights. Thus, in 2012 the UN Special Rapporteur in the field of cultural rights described this right as ‘the right to science’ which serves to advance the aims of the other cultural rights, that is, ‘the pursuit of knowledge and understanding and...human creativity in a constantly changing world.’\textsuperscript{61} The right to science is a prerequisite to the realisation of other rights such as the right to education and the right to development. It thus connotes ‘a right of access’ in the sense that ‘scientific knowledge, information and advances must be made available to all, without discrimination of any kind’, including disability grounds.\textsuperscript{62} Moreover, the terms ‘benefits’ and ‘scientific progress’ imply ‘a positive impact of the well-being of people and the realisation of their human rights.’ Consistent with GC No. 21, the Special Rapporteur understood the normative content of the right to science as including, amongst others, an obligation on the states to provide non-discriminatory ‘access to the benefits of science by everyone’, including the benefit of scientific applications and technologies as a whole and ‘innovations essential for a life with dignity’, particularly for

\textsuperscript{57} Ibid at [31] (emphasis added)

\textsuperscript{58} Ibid at [69] (emphasis added)

\textsuperscript{60} Ibid at [69] (emphasis added); The same warning to WIPO, WTO and other UN agencies was issued in the context of the right of authors to benefit from their moral and material interests in 2005. See also, CESCR, General Comment No.17 (n 31) at [56]

\textsuperscript{62} Ibidem
marginalised populations such as persons with disabilities. As digital information technologies continue to offer increased access to content to sighted people, the right of science clearly aims to prevent, for example, the risk of ‘digital exclusion’ of VIPs, as the European Blind Union (EBU) has argued before, and enhance the democratic participation of these ‘IP-marginalised’ social groups.

Unlike the Committee, the Special Rapporteur did engage with the conflict between the right to science and modern IP protection, expressing concerns about TRIPS-plus norms that significantly restrict the ‘flexibilities’ offered in TRIPS and further reduce the policy space for states to promote important social policies inherent in the human right to science. Drawing on arguments advanced by knowledge-rights activists and scholars, the Special Rapporteur recommended adopting ‘a public good approach to knowledge innovation and diffusion and...reconsidering the current maximalist intellectual property approach to explore the virtues of a minimalist approach to IP protection.’ Consistent with their historical origins, scholars argue that the international human rights to science and culture in Art.27 UDHR and Art.15 ICESCR require ‘knowledge to be treated as a shared public resource, with international collaboration and universal access as touchstone commitments’ rather than as private property. In supporting its privatisation, the IP-maximalist approach treats knowledge as a public goods problem that can only be solved by excluding access to incentivise the supply of longer-term creations and innovations but operating under an ‘evidence-free zone’ in support of the premise that the social costs are truly outweigh by the benefits.

2.3. The 2006 Report on “limitations and exceptions”

Yet knowledge as a ‘global public good’ means that information goods are expanded rather than diminished as greater numbers of people enjoy access to them. Thus, science and culture may alternatively be treated as a public goods opportunity so that ‘we could not only enhance human welfare by collaborating to provide these goods, but…the process of collaboration itself would also pay dividends.’ Regrettably, the Special Rapporteur offered no elaboration on what this ‘IP-minimalist’ approach should entail though scholars have offered several options and proposals calling for reduced terms of protection, expansion of

copyright exceptions and limitations (E&Ls), and reinvigorating user rights. Apart from human rights, scholars began to advocate for the use and development of other internal policy tools to bring balance between authors’ exclusive rights and the wider public interest in access to copyright works which was perceived to be distorted by the one way-ratchet of international IP law, particularly copyright. Some increasingly observed how more adept rights holders had proved than user groups at putting their demands for higher protection before several legislatures and international lawmakers with little attention for the user side of the equation or even how international copyright law rarely addresses E&L’s on the rights of the owner. Scholars argued that, when high level of international protection is conferred, exceptions must become integral to the balance of copyright by imposing ‘substantive maxima’ on heightened copyright protection or more ‘explicit user rights’, or even by developing an ‘international fair use standard’ that could act as a ‘ceiling’ on increasingly harmonised copyright norms which is TRIPS-compliant whilst performing its ‘welfare functions’ in the the domestic needs and priorities of developing countries. In 2006, a report commissioned by the UN Conference on Trade & Development and the International Centre for Trade and Sustainable Development identified a category of ‘global minimum limitations and exceptions’, including a disability exception, highlighting ‘strategic and substantive’ advantages in the drafting of more detailed E&Ls in an an international instrument and calling for such ‘international minimum core’ of E&Ls to become a mandatory part of the international copyright system. In calling for mandatory IP ceilings on the scope of international copyright as a way to restore balance between the expectations of authors and users, the study lent even further support for the growing pressure at WIPO for an international mandatory instrument to address the global book famine of VIPs.

3. WIPO NEGOTIATIONS

### KEY FINDINGS

- Proposal by the World Blind Union and Latin American Countries for an international treaty on exceptions to copyright.
- Intense opposition led to other proposals calling for a mere declaration or recommendation but not a treaty.
- After four years of intense negotiations, the Marrakesh Treaty is successfully adopted in June 2013.
- Stakeholders Platform as a practical way to implement and achieve the aims of the Marrakesh Treaty: TIGAR and ETIN

#### 3.1 The Proposals

It is clear then that the nature of IP laws (particularly copyright) was increasingly identified as a potential obstacle to the 'full realisation’ of the human rights guaranteed in the Covenant and the CRPD, particularly affecting the social inclusion and cultural participation of IP-underserved groups (ie persons with disabilities) in their universal entitlement to equal access to knowledge or ‘empowerment’ right –‘a right that enables a person to experience the benefit of other rights.’

UN human rights bodies have since at least 2000 raised growing concerns about the impact of the increased global protection of IP under TRIPS upon the states’ commitments to ensure they undertake and achieve the full realisation of their human rights obligations paying particular attention to the needs of the most marginalised and socially disadvantaged groups. The implementation of TRIPS-prescribed minimum standards for protecting IP, coupled with growth in TRIPS-plus agreements (that is, obligations over and above minimum standards without the built-in flexibilities permitted under TRIPS), make it exceedingly difficult for individual countries to have the flexibility to promote social, economic, cultural, and scientific development for all, as mandated in international human rights instruments. The concerns raised in the General Comments and, more recently in the Reports of the Special Rapporteur, are unequivocally expressed in Art.30(3) of the CRPD. Though non-binding, the recommendations adopted in the General Comments provided a solid ‘template’ for developing countries, knowledge-rights activists and human rights/disability rights advocates which formed a global social movement under the umbrella term ‘access to knowledge’ in opposing expansive IP protection standards and calling for a more transparent and pluralistic process of international lawmaking at WIPO.

In parallel, new umbrella organisations such as IP-Watch, KEI (Knowledge Ecology International) and IP Justice were created to contribute and report on the activities of these groups.

The efforts by the WBU and KEI in convening an expert group from nineteen countries to consider a text for a possible Treaty for VIPs were instrumental in paving the way for ‘the

78 P Yu (n 39) 1114
right to read movement that galvanised countries to place the issue of an international treaty on the WIPO agenda. In 2009, the WBU persuaded a group of Latin American countries to table a proposal at the 18th Session of the WIPO Standing Committee on Copyright and Related Rights (SCCR) for a specific treaty entitled the ‘Proposal by Brazil, Ecuador and Paraguay Relating to Limitations and Exceptions: Treaty Proposed by the WBU’ (which Mexico later joined and so it became the WBU/BEPM proposal). The central purpose of the WBU/BEPM Proposal was to frame the right to read as an issue of fundamental human rights. It did so by proposing, in essence, to establish a multilateral legal framework of exceptions and limitations for the benefit of persons with reading disabilities that would ensure full and equal access to information and communication.

At the same time, the WBU/BEPM Proposal placed emphasis on broad measures necessary for the cross-border transfer of copyright works that have been adapted for such purposes even without trusted intermediaries, though this perceived as potentially stoking up publishers’ stated fears of piracy. In terms of the beneficiaries and the range of accessible format works covered, it offered ‘extremely inclusive’ definitions that ‘would make all forms of accessible works available to the broadest range of users covered’. The WBU/BEPM Proposal also divided the exceptions into two categories: activities of ‘non-profit’ entities to make and supply accessible format copies without the authorisation of the copyright holder and without any form of notification or remuneration, and activities of ‘for-profit’ entities with the possibility of an opt-out mechanism regarding the application of the exception. When the copyright holder is entitled to ‘adequate remuneration’, this does not exceed reasonable commercial norms, taking into account the economic situation of the contracting state (whether developed or developing country) and provided that the the work is not reasonably available. Of note is the novel approach to create an obligation to ensure that beneficiaries have the means to enjoy the exception where any technological protection measures (TPMs) (including any digital rights management systems, DRMs) are built in to a digital work, and to declare any contractual clauses contrary to the exceptions null and void.

Although the WBU/BEPM Proposal garnered ‘a great deal of support among the rights organisations and users’, a number of WIPO members pointed to inconsistencies with their national legislation implementing international obligations. Indeed, so far-reaching and controversial was the WBU treaty proposal that, the following year, three new proposals from the African Group, the EU and the US were circulated for consideration, each of which supported alternative approaches that whilst relatively similar were also remarkably different. The African Group proposed a ‘Draft WIPO Treaty on Exceptions and Limitations for the Persons with Disabilities, Educational and Research Institutions, Libraries and Archives’ which was then revised and tabled as binding treaty for E&Ls (AG Proposal). Overall, the AG Proposal represented a very ambitious attempt to benefit all disabled people (not just...
print-disabled) by promoting ‘equal access to education, culture, information and communication as a fundamental right that comes under public policy.’ It thus identified the class of beneficiaries more broadly, including educational and research institutions, libraries and archives as beneficiaries of the mandatory E&Ls to copyright materials. Though it shared similar language to the WBU/BEP Proposal, the AG Proposal went much further in adopting a more a ‘holistic approach’ to the proper recognition of the public interest within the international copyright system, which eventually led to the proposal’s downfall.

Whilst the WBU and African Group proposals presented striking similarities in the sense of being more favourable to VIPs on many fronts, the US and EU proposals were far more restrictive by merely supporting a non-binding instrument and being rightholders-orientated. For instance, the EU tabled a ‘Draft Joint Recommendation’ (EU Proposal) aiming to increase the number of accessible format works for print-disabled people only to the extent that ‘there is no appropriate commercial product on offer’ and merely recommending ‘that every Member State should introduce in their national copyright law an exception’ to certain rights on a non-commercial basis. Such print-disability exception was subject to the international three-step test, namely 1) only in certain special cases 2) which do not conflict with a normal exploitation of the work and 3) do not unreasonably prejudice the legitimate interests of the right holder. The EU Proposal championed the idea of a global network of Trusted Intermediaries (TIs) whose activities would ‘facilitate the production of works in accessible formats, and/or their cross border transfer in a controlled manner’ subject to a long list of mandatory conditions. It further advanced the interests of copyright owners by proposing adequate remuneration, prohibiting direct distribution of accessible format copies to the beneficiary, and mandating notice to the right-holders when making an accessible format under the exception.

The EU’s solution based upon TIs, accompanied by notice to the right-holder, attracted sustained criticism for being an unworkable solution that would hinder rather than increase access. Nor did the ‘Draft Consensus Instrument’ proposed by the US offer a better solution (US Proposal). This was the shortest of the four proposals, relying on the apparent flexibility of the three-step test and on the disputed view of the US that it would become binding upon its members as an interpretative instrument of that test. Tracking very closely the EU Proposal, the US Proposal covered a defined class of beneficiaries (print-disabled) and centred largely around the use of TIs for the export and import of ‘special format’ copies though with fewer mandatory conditions for TIs and without copyright owner’s authorisation. It left the question of monitoring and approving TIs unaddressed, which was also problem the EU Proposal. In the face of fierce opposition to a binding treaty by the US/EU

representatives,\textsuperscript{101} the negotiations achieved little progress in reconciling the divergent positions in the proposals but there was a commitment to a work programme on E&Ls for the two-year period 2011-2012.\textsuperscript{102}

\subsection*{3.2 Compromise}

The position adopted by EU representatives at WIPO was in stark contrast to the full and public support of the EU Parliament for the WBU/BEPM proposal for a binding legal treaty.\textsuperscript{103} In September 2011, the European Parliament Petitions Committee (PETI) heard a petition by the European Blind Union (EBU) and the Royal National Institute of the Blind (RNIB) requesting Parliament to ensure that EU negotiators actively pursue a binding treaty rather than propose a mere recommendation (or even regressive amendments) at WIPO meetings and discussions.\textsuperscript{104} Supportive of the EBU/RNIB’s petition, on 15\textsuperscript{th} February 2012 the Parliament Plenary heard answers from the Commission and the Council to oral questions from Erminia Mazzoni MEP on behalf of the Petitions Committee. The MEPs’ questions were ‘vehemently critical’ of the Commission’s stance though it emerged during the discussions that a mandate from the Council was needed for the Commission to pursue a binding treaty.\textsuperscript{105} In its resolution, the EU Parliament recognised that print-disabled in the EU have ‘severely restricted access to books and other print materials because 95% of all published works are never converted into accessible formats’ and fully supported the proposal for an international legally binding framework for a copyright exception for cross-border distribution of accessible books.\textsuperscript{106} It thus called on ‘the Council and the Commission to support a binding WIPO treaty...’\textsuperscript{107} Unfortunately, this was not the last time that Parliament had to intervene to request reassurances from EU representatives. But the views of the EU Parliament were consistent with the findings of two reports published in 2009 by the EU Parliament Petitions Committee (PETI). After examining the multiple barriers that print-disabled people face, the PETI reports identified a combination of solutions such as a stronger commitment from the publishing industry to improve commercial availability, an international treaty to allow the sharing across borders of accessible format publications and a mandatory disability exception in EU copyright law to allow such publications to circulate freely within the EU.\textsuperscript{108}
At WIPO, the initial proposals were subsequently merged into two and finally into a unified text which combined elements from the earlier proposals.\(^{109}\) Although less comprehensive than the WBU/BEPM treaty proposal, the unified text certainly represented a significant step with broad support from the delegations. However, it was not until November 2012 that progress towards a binding treaty was made when the EU abandoned its pro-publishers stance for a non-binding solution leaving the US delegation isolated.\(^{110}\) Later that year and in a more constructive atmosphere, common ground and understanding resulted in a working draft text for an international treaty (or another instrument) that was then transmitted for evaluation to WIPO General Assembly, which could decide on whether to convene a diplomatic conference in 2013.\(^{111}\) A primary area of contention in the discussions was a set of clauses, one of them relating to the requirement of a commercial availability as prerequisite for using the treaty and another one was the prohibition on charities to send accessible format books directly to print-disabled individuals in other countries.\(^{112}\) Commercial availability clauses mandate that prior to the making available of an accessible book, commercial availability of this book on the local market at reasonable conditions, such as price, should be checked. These contentious clauses appeared in Articles D and E of the Draft Text, which were seen by some as representing EU support for protecting the publishers’ interests rather than increase accessible books.

This prompted the WBU to write a letter to the Commission asking for reassurances that the EU negotiators would not pursue these conditions in the upcoming negotiations in April 2013. For the WBU, the commercial availability check would be ‘burdensome and impossible to implement’, particularly when charities in developing countries have limited resources, and requirement for a ‘middleman’ to transfer accessible books to a blind person simply as a very inefficient way of maximising availability.\(^{113}\) In its reply, the Commission saw the commercial availability condition ‘as the best possible incentive for publishers themselves to put the special format books in the market’ whilst the condition for an intermediary as the best way forward to avoid potential abuses.\(^{114}\) Understandably, the EBU viewed the reply as surprising, at best, and frustrating, at worst, since the treaty proposal was not intended to serve as incentive for publishers but about copyright exceptions to ensure maximum access for the print-disabled without infringing copyright and without burdensome bureaucracies.\(^{115}\) Indeed, one of the EP studies in 2009 had already reported that ‘until now the publishing industry has largely ignored print-disabled people as a market segment,

having deemed us not be a commercially viable customer group.’\textsuperscript{116} In intense negotiations held between February and April 2013, it was agreed that the commercial availability requirement would be rephrased as optional rather than a mandatorily pre-condition for the exception, in order to allow countries with similar commercial availability clauses to ratify the treaty, such as the UK and other EU countries.\textsuperscript{117} One way in which consensus was reached was through specific language in ‘agreed statements’ that were added in a footnote to certain contentious provisions as a way out of an entrenched position. This is how the issue of direct distribution to a beneficiary was eventually settled.\textsuperscript{118} After four years of arduous negotiations, the efforts and active involvement of NGOs finally came to fruition with the adoption of the Marrakesh Treaty in June 2013.

### 3.3. WIPO Stakeholders’ Platforms

In opposition to the treaty proposal, rightholders associations acknowledged the need for enhancing access to accessible works but instead hastily proposed calling on WIPO ‘to launch a platform of stakeholder consultation to develop a roadmap for ensuring access to copyright works for the blind and visually impaired... in a trusted in secure environment.’\textsuperscript{119} To this end, in 2008 the SCCR launched the WIPO’s Stakeholder Platform, a working group comprising major stakeholders representing copyright holders, publishers, libraries, and advocate organisations acting on behalf of the blind and VIps. The aim of the Stakeholder Platform was ‘to facilitate arrangements to secure access for disabled persons to protected works,’\textsuperscript{120} though the Chilean delegation observed that the Platform’s intended nature was to complement rather than substitute the proposal for a treaty.\textsuperscript{121} It was thus intended to be a practical course of action to increase, without delay, accessible formats for the print disabled irrespective of the legal outcome of the formal negotiations. In truth, this was not an entirely new idea as discussions between the WBU and the International Publishers Association (IPA) had been ongoing for some years with little progress.\textsuperscript{122} The Platform was divided into two working subgroups, namely the trusted intermediaries’ subgroup and the technology subgroup, with the aim of ‘exploring their concrete needs, concerns, and suggested approaches’ in order to implement goals of the proposed treaty at a practical level.\textsuperscript{123}

\textsuperscript{121} WIPO SCCR 19th Session, Secretariat’s Report SCCR/19/15 (Dec 14-18, 2009) [accessed 24 October 2016]

In 2010, WIPO’s Stakeholder Platform produced two principal initiatives, namely VisionIP.org and the Trusted Intermediary Global Accessible Resources (TIGAR). The VisionIP project, which was commonly referred to as the stakeholders’ platform, sought to collect technical commentary from anyone interested in providing input through the website. As a multistakeholder platform, VisionIP also compromised several areas of activity, one of which was the TIGAR project whose aim was to make the publishing community feel comfortable sharing their master files with trusted intermediaries, which would then transfer those files in accessible format to users. TIGAR thus sought to find a “sustainable business model” to support transfer of accessible book files on an ongoing basis. The term ‘trusted intermediary’ generally refers to any entity that facilitates interactions between two parties who both trust the third party, with the mandate to ensure the controlled distribution of accessible copies of works, when these are not commercially available, to persons with a print disability. Overall, TIGAR meets three important objectives for improving the global book famine: firstly, it saves individual publishers the costs in unnecessary duplication by removing the need to create master files from scratch; secondly, it assuages publishers’ fears of piracy; and thirdly, it streamlines licensing arrangements as it acts as a one-stop shop for all organisations publishing accessible formats. Permission by the copyright owner is, therefore, one of the central features of the TIGAR pilot programme.

During the ongoing treaty negotiations, TIGAR became a highly sensitive political issue as the WBU decided to suspend its participation when it became clear some stakeholders were wrongly viewing TIGAR as an alternative to a binding legal instrument and a justification for slowing down any progress on a treaty. WBU also cited that ‘the terms [of the stakeholders’ agreements] would be too onerous and the cost benefits too unclear’ as another reason for its temporary withdrawal. The TIGAR project nevertheless continued. Even though the three-year mandate ended in 2013, a separate TIGAR initiative to establish a global accessible library was taken forward. Thus, in May 2014 the WIPO SCCR agreed to evolve the project into a permanent multi-stakeholder entity to be named the Accessible Books Consortium (ABC) which was launched on the first anniversary of the adoption of the Marrakesh Treaty. The ABC’s stated purpose is to support and complement the aims of the Marrakesh Treaty with its ABC Book Service (formerly known as TIGAR) being a blogal online catalogue of books in accessible formats that provides libraries serving people who are print-disabled with the ability to search and make requests for accessible books.

More specifically, the ABC Service is ‘an international library-to-library technical platform’ that makes ‘operational the treaty’s cross-border provisions.’ As of 2016, it has 19 ‘authorised entities’ (that is, a TI by another name) in 16 countries participating in its service which offers a catalogue of 315,000 titles in more than 55 languages. It has also reported more than 5,100 downloads by authorised entities with an estimated saving in production costs in the region of USD 10.2 million, though long delays due to clearance of publishers’

124 D Conway (n 1) 48
125 A Rekas (n 7) 68
126 A Rekas (n 7) 68
131 Ibidem
permission continues to be the biggest challenge in increasing accessible titles. In addition to its library services, ABC also covers other two practical initiatives to support the Marrakesh implementation. ABC’s ‘capacity building’ activities focus on providing training and technical assistance in developing and least developed countries (LDC) in the production and distribution of accessible books.

In 2015, four capacity building projects were completed in South East Asia countries covering Bangladesh, Nepal and Sri Lanka thanks to funding from the Australian Government, and a similar project in India thanks to donations from the Korean Republic. It is estimated that 88,500 print-disabled students in these countries will benefit from the production of educational accessible materials in national languages, and there are plans to roll out building capacity projects in Africa and Latin America. Another important ABC initiative is to promote ‘accessible publishing’ which encourages publishers to produce ‘born accessible’ publications, ie books that are usable from the start both sighted persons and the print-disabled. To achieve these born accessible aims, ABC seeks collaboration between print-disabled organisations and publishers as a central strategy to advance and increase the accessibility of commercial e-books or other digital publications to VIPs. Without doubt, ABC’s ‘born accessible’ project represents a concrete step in achieving the need for a ‘book for all’ strategy that the 2009 EP study identified as a way to promote social inclusion through publishing, ie ‘books that everyone can buy and read, at the same time, at the same price, and through the same distribution channels.’

At European level, the signing of the 2010 Memorandum of Understanding (MoU) established a system of mutual recognition of TIs so that registered print-disabled persons could access books from all over the EU. The MoU was drafted and agreed by a group of organisations representing people with print disabilities on one side, and the European publishing industry on the other. Both sides acknowledged ‘the need to find pragmatic solutions’ and agreed to set up a system whereby publications in accessible formats, such as Braille and audio books, can be more easily distributed across the EU Member States. Another aim of the MoU is to support publishers in making the production of accessible works an integral part of publishing. The MoU is the brainchild of the Commission’s Green Paper entitled ‘Copyright in the Knowledge Economy’ in which several questions were raised around the issue of ‘how to supply relevant organisations with a non-protected digital copy for creating accessible formats in a way that addresses publishers’ concerns about security...’ A suggested solution to that problem was a system of TIs which can negotiate with rightholders and enter into agreements, and that is precisely what the MoU sought to do. Incidentally, despite observing signficant disparities in the way national legislations have introduced a disability exception, none of the questions asked whether the optional exception in Art.5(3)(b) of the Copyright Directive should become mandatory.

Some signatories of the MoU include the International Federation of Reproduction Rights Organisation (IFRRO), European Writers’ Council, Federation of European Photographers, International Association of Scientific, Technical and Medical Publishers

(STM), EBU and the European Dyslexia Association (EDA). The practical implementation of the commitments under the MoU led to the creation of the European Trusted Intermediaries Network (ETIN) - a Brussels-based network representing both TI organisations and rightholders which aims to have pan-European coverage.\textsuperscript{138} With the support of the Commission, the ETIN acts as contact point and advisory/consultation centre for the cross-border distribution and supply of accessible copies. To this end, it has agreed a model licence/agreement as a basis for arrangements between potential TIs and publishers at national level.\textsuperscript{139} Notwithstanding their different geographical coverage, the ABC Service (TIGAR) and the ETIN are complementary and mutually supportive albeit the activities of the former seem to have overtaken the latter at European level.\textsuperscript{140}

4. THE MARRAKESH TREATY

**KEY FINDINGS**

- The central aim of the Marrakesh Treaty is to introduce mandatory exceptions into national copyright laws to improve the availability of accessible books.
- The heart of the Treaty is the cross-border sharing of books in accessible formats.
- The Treaty has so far been ratified by 26 countries and entered into force on 30th September 2016. It is thus a binding international norm.
- EU ratification has been delayed by a blocking minority of countries in the Council who argue that there are issues about timing and competence.
- Though the Court of Justice of the EU has yet to offer its opinion, the recent Opinion of the Advocate General confirms the Union’s exclusive competence and calls for the Treaty to be ratified.

4.1 Contents

The ideological tensions that accompanied the proposals and negotiations is evident in the Preamble to the Treaty. The underlying reasons for its adoption as well as the two opposing arguments that plagued its protracted negotiations are clearly stated thereof. The Treaty’s human rights basis is identified in freedom of expression, the right to education and the right to take part in cultural life. Its justifications for addressing the book famine are identified in ’the need both to expand the number of works in accessible formats and to improve the circulation of such works,’ including the ‘possibilities of cross-border exchange of accessible format copies’ to avoid duplication efforts and resources that go into making works accessible to print disabled persons. In emphasising the importance of the role of rightholders in making their works accessible in the first place, the Preamble recognises the political compromise in the description of the limitations and exceptions as arising ‘particularly when the market is unable to provide such access.’ There is nevertheless a stated acknowledgement of ‘the need to maintain a balance between the effective protection of the right of authors and the larger public interest…’

A central feature of Marrakesh is to be the first multilateral, binding agreement primarily devoted to the rights of users in the global copyright regime by recognising their fundamental human right to equal access to information and participation in culture. As Conway has noted, t these users represent ‘a historically underserved segment of society’, ie the visually impaired, notwithstanding disruptive information technologies and new digital media increasingly creating even more access to printed content and knowledge for sighted people. Furthermore, the compromise proposal that culminated in the Marrakesh Treaty clearly retained important distinct features of the initial proposals. For instance, the binding nature of E&Ls (WBU/BEPM and AG Proposals), minimum E&Ls but with exceptions-plus provisions that permit adopting more extensive protection (WBU/BEPM Proposal), the flexibility in the implementation method (WBU/BEPM and AG Proposals), and import and exports of accessible format copies (WBU/BEPM and AG Proposals).
Art.2 offers the definitions of ‘works’ (the subject-matter covered), an ‘accessible format copy’ and ‘authorised entity’. The reference to ‘literary and artistic works’ means that Marrakesh Treaty applies to a broad category of materials protected by copyright. The expression ‘literary and artistic works’ is found in international copyright and include ‘every production in the literary, scientific and artistic domain’ such as ‘books, pamphlets and other writings, lectures, addresses, sermons and other works of the same nature, dramatic or dramatico-musical works, choreographic works and entertainments in dumb show, musical compositions with or without words’.\textsuperscript{141} Art.2(a) of Marrakesh states that the specific copyright works covered may be expressed ‘in the form of text, notation and/or related illustrations’ but goes on to stress ‘whether published or otherwise made publicly available in any media.’ This indication clearly purports to apply expansively as the reference to ‘any media’ suggests the Marrakesh exceptions are technology neutral. This allows any new forms of digital formats to be covered. It also means that a print-disabled can obtain an accessible copy whether or not it has been published. Moreover, the ‘agreed statement’ clarifies audio form, such as audiobooks, are covered.\textsuperscript{142}

Similarly, the definition of ‘accessible format copy’ is accommodating in the sense that the alternative form allowed is on that ‘gives the beneficiary person access to the work, including to permit that person to have access as feasibly and comfortably’ as a person without the disability. This definition also makes clear that the Marrakesh exceptions do not affect the moral rights of the author as it requires the beneficiary ‘to respect the integrity of the original work’.\textsuperscript{143} Furthermore, an ‘authorised entity’ is defined in broad terms as ‘an entity that is authorised or recognised by the government to provide education, instructional training, adaptive reading or information access to beneficiaries on a non-for profit basis,’ It also includes government institutions or non-profit organisations that provide the same services to beneficiary persons as one of its primary activities or institutional obligations, ie libraries, schools, civil society groups, etc. The range of actors allowed to create and share accessible copies is thus expansive. Authorised entities are also permitted, without the authorisation of the copyright owner, to obtain from another authorised entity an accessible copy and supply it to beneficiary persons by any means. They therefore play a vital role achieving the intended purpose of the Treaty. Furthermore, Art.2(c) outlines four practices that authorised entities must establish and follow in order to perform the permitted acts under the Marrakesh Treaty:

(i) to establish that the persons it serves are beneficiary persons;

(ii) to limit to beneficiary persons and/or authorised entities its distribution and making available of accessible format copies;

(iii) to discourage the reproduction, distribution and making available of unauthorised copies; and

(iv) to maintain due care in, and records of, its handling of copies of works, while respecting the privacy of beneficiary persons in accordance with Article 8.

An authorised entity must perform all of these four cumulative practices though their content is not described in any detail. The reference to ‘an authorised entity [that] establishes and follows its own practices’ in Art.2(c) is arguably permissive in the sense that it permits

\textsuperscript{142} Agreed Statement concerning Art. 2(a), Marrakesh Treaty.

\textsuperscript{143} M Ficsor, ‘Commentary to the Marrakesh Treaty on Accessible Format Copies for the Visually Impaired.’ 10 November 2013. \url{http://www.copyrightseesaw.net/archive/?sw_10_item=50} [accessed 24 October 2016]
the entity itself to be responsible for establishing and monitoring these practices in good faith. The Marrakesh Treaty does not mention any rules that national governments may impose on authorised entities, nor does it refer to an approval process. It does however provide for the possibility of a registry but merely through ‘the voluntary sharing of information to assist authorised entities in identifying one another’ under Art. 9(1). Furthermore, the category of beneficiary persons is similarly broadly defined. Thus, Art.3 lists three categories: a) blind, b) has a visual impairment or perceptual or reading disability which cannot be improved to give a visual function, or c) otherwise unable, through physical disability to hold or manipulate a book or focus or move the eyes for reading. This is sufficiently broad to include people with progressive eye loss due to aging, motor-neuron patients, etc. Commentators also include dyslexia and the proposed Marrakesh Directive explicit incorporates it.144

The core obligations are laid down, in particular, in Articles 4 to 7. Thus, Art.4(1) mandates exceptions or limitations to national copyright laws regarding the rights of reproduction, distribution and making available to the public in order ‘to facilitate the availability of works in accessible format copies for beneficiary persons.’145 These mandatory provisions thus limit rather than expand the scope of copyright protection, as has historically been the case. In addition, contracting parties may also extend the exception or limitation to the right of public performance (ie public recitation of a poem or a play) but are not required to do so.

It seems that the public performance right might have been added to address situations where ebook readers offered a text-to-speech function, like the Amazon Kindle 2 initially had, but which Amazon disabled at the request of the Authors Guild in the US.146 The claim was that the reading of a book aloud by a device constituted infringement of the public performance right unless the copyright holder specifically granted permission. However, the right of public performance requires the presence of a live audience or ‘public’ and VIPs routinely use speech function to access books for private use. In any case, the specific reference to ‘audio books’ as a protectable category of works under the Treaty would cover text-to-speech function. Though limited in terms of application, the exception to the public performance right may cover audio description devices like the ones used in cinemas or even recordings of theatrical representations made as accessible format copies which are accompanied by (sotto voce) descriptions of the acts, movements, source of sounds/noises, the scene and/or costumes.147

One central feature of the Marrakesh Treaty is that contracting parties have significant flexibilities in how they can fulfil their treaty obligations. The Treaty nevertheless offers contracting parties an optional model to comply with each substantive core obligation, which is fully complaint with the spirit of the Treaty and with the general obligations under the three-step test outlined in Art.11 Marrakesh Treaty. For instance, Art.4(2) provides one way to comply with the substantive core obligations in paragraph (1) as well as the conditions for the exceptions or limitations. Thus, Art.4(2) articulates the recommended exceptions for authorised entities and for beneficiary persons. Under Art.4(2)(a), authorised entities are permitted, without the authorisation of the rightsholder, to undertake three distinct activities: to make an accessible format copy of a copyright work, to obtain from another authorised entity an accessible format copy, and to supply those copies to beneficiary persons by any

147 M Ficsor (n 143)
means. The national legislation must also allow the direct supply of a copy to a beneficiary person by ‘non-commercial lending or by electronic communication’. Contracting parties must thus permit the distribution and sharing of accessible format copies over the Internet or under any lending system. However, the recommended exception for authorised entities under Art.4(2) is subject to four cumulative conditions and ratifying countries must include all of them in implementing national legislation:

(i) the authorised entity has lawful access to the work;
(ii) the work is converted into accessible format (including changes needed to navigate information in the copy), provided the conversion does not introduce changes to the work other than those that are necessary to make it accessible;
(iii) the accessible format copies are supplied exclusively to be used by beneficiary persons; and
(iv) the activity is undertaken on a non-profit basis.

These cumulative conditions would appear to balance the rights of the print-disabled against the legitimate interests of the copyright holder. As stated, the Marrakesh Treaty permits countries to design the manner in which the exceptions and limitations may function but, if countries decide to adopt the Treaty’s recommended design for exceptions, this adopted design would presumptively be compliant with the three-step test. Similarly, Art.4(2)(b) outlines a model for contracting parties to enact on behalf of beneficiaries person. Under this provision, the recommended exception must allow a beneficiary person (or someone acting on his or her behalf including a carer, family member, teacher or librarian) to make an accessible format copy of a work subject to two conditions, namely that the copy is for the personal use of the beneficiary and the beneficiary person has lawful access to the work or a copy thereof. As with the recommended template for authorised entities, national legislation that follows this template offered in the Marrakesh Treaty would presumptively be consistent with the three-step test.

There is a further set of optional restrictions that the Marrakesh Treaty allows countries to adopt in their national legislation. The first is the controversial requirement of a check on commercial availability, which is optional but not mandatory for the use of the exception. A country may thus confine the exceptions or limitations under Art.4 to copyright works ‘which, in the particular accessible format, cannot be obtained commercially under reasonable terms for the beneficiary person in that market.’ If a commercial availability requirement is adopted, the contracting country must notify WIPO of that decision. Apart from being permissive rather than mandatory, the option for a commercial availability requirement under Art.4(4) is limited to very specific circumstances: it can be applied in domestic law only on a ‘format-by-format basis’ (not across the board) and the specific accessible copy must be commercially available ‘under reasonable terms’ for beneficiary persons in that market. The Treaty does not elaborate any further on the meaning of ‘reasonable terms’ but some have argued that the reasonableness of the terms of the commercial offering may refer ‘not only to the price, but, arguably, to other relevant supply terms, such as in particular the time required to obtain the work and the transaction costs involved in locating it.’ It may also include the technological characteristics of the specific

151 S Vezzoso, ‘The Marrakesh Spirit – A Ghost In Three Steps? (2014) 7 IIC 796, 817. See also, ‘Briefing Paper Version 2: Marrakesh Treaty Implementation Guide, South Africa’, May 2015, p.7 (Raising questions such as, does it mean reasonable for the majority of VIPs in the particular country? Or reasonable for the individual seeking to acquire access? What are the ‘terms’ that must be reasonable?)
accessible format available in the sense of being interoperable with different platforms to avoid the extra cost for the print-disabled of owning different devices.\textsuperscript{152} Furthermore, the Marrakesh Treaty provides the option (but no obligation) for the mandatory exception to be subject to remuneration, in which case the exception takes the form of a \textit{limitation}.\textsuperscript{153} Member states have thus the option of a statutory licence rather than an absolute exception. These ‘flexibilities’ are also available for contracting parties to implement when adapting national law to comply with their obligation to allow for the importation of accessible format copies under Art.6 of Marrakesh Treaty.

There is no doubt that, if implemented into national law, the combined effect of the optional flexibilities in Articles 4(4) and 4(5) would significantly restrict the freedoms allowed under the Treaty and narrow the reach of its overall purpose to end of the book famine. These optional provisions are intended for ‘a small number of countries that already have such provisions in their national law’ but, in order to maximise the availability of accessible materials for user with print-disabilities, the Electronic Information for Libraries (EIFL) recommends that ‘they should not be used as a model for other countries, especially low-income countries.’\textsuperscript{154} The commercial availability requirement simply puts additional burdens on organisations serving the needs of visually impaired persons and libraries providing reading materials for users with print disabilities, which operate under very limited budgets and resources.\textsuperscript{155} For these authorised entities, this means they would first have to conduct a search to check whether the publication is commercially available in accessible format in the country and then to ascertain whether or not it is available under ‘reasonable terms’ before making an accessible copy. There is also the level of risk of being sued for copyright infringement in the event that there is in fact a commercially available work, which might have the chilling effect of discouraging libraries or other authorised entities offering the service at all.\textsuperscript{156}

In addition to these challenges and burdens, the Treaty leaves a number of unresolved questions about commercial availability that strongly militate against restricting the exceptions or limitations to commercially unavailable publications: what is the meaning of ‘availability’? (Does it mean available in bookshops or online, or both? What does ‘commercial’ availability require? (Does it refer to how widespread the accessible copy is offered and does it cover for profit organisations only?) ‘Where’ is commercial availability to be assessed? (Does it refer to a domestic, regional, or global market?) ‘When’ is the time for assessing commercial availability? (Does it mean at the time of publication, at the time a print-disabled person requires the copy, or at some other time in the future?) The uncertainties around these undefined terms would simply result in long delays, unnecessary complexity, inefficient of use of limited resources and unjustified restriction in the fundamental right of the print-disabled to have access to information on an equal basis with sighted people as mandated under the CRPD. Furthermore, the fact that commercial availability is an optional rather than mandatory provision is a clear indication that it is not in keeping with the spirit of the Marrakesh Treaty to adopt it.

Art.4(3) allows countries to fulfil their obligations under subparagraph(1) by providing other E&Ls in their national laws (rather than adopting the model in Art.4(2)), subject to the

\footnotesize{\begin{itemize}
\item S Vezzoso, (n 151) p.817
\item Art.4(5), Marrakesh Treaty.
\end{itemize}}
general principles in Art.10 and the three-step test obligations outlined in Art.11 of the Marrakesh Treaty. Thus, a country may decide to comply with the Treaty by relying on existing statutory defences such as on fair use or fair dealing. However, the mention of ‘other exceptions and limitations’ in this provision refers exclusively to exclusive rights outlined in Art.4(1), not to others beyond those stipulated therein.\textsuperscript{157} The agreed statement to Art.4(3) clarifies that this provision ‘neither reduces nor extends the scope of applicability’ of exceptions and limitations under the Berne Convention as regards the translation right. Thus, the Marrakesh Treaty affirms any pre-existing exception in national law to the translation right so that contracting parties may continue to apply (or even extend) such laws to permit authorised entities and beneficiaries to create translations where required to enable access to covered works.

On the other hand, Art.5(1) mandates the cross-border distribution of accessible format copies provided that they are made under an exception or pursuant to operation of law. This mandatory right to export applies in two cases: by an authorised entity directly to a beneficiary person, or by an authorised entity to another authorised entity in another contracting state. As with Art.4(2), Art.5(2) provides a model that countries may adopt in their national law which, if adopted, is presumptively compliant with the spirit of the Treaty and any obligations under the three-step test in Art.11. Thus, one way to comply with the right of export is to permit authorised entities, without the authorisation of the rightholder, to distribute or make available for the exclusive use of beneficiary persons accessible copies to an authorised entity in another contracting country, and to do the same directly to a beneficiary person in another contracting country. The cross-border transfer can thus take place through physical copies or digital copies over the internet. The export right is central to the aim of ending the book famine as it allows organisations such as Bookshare in the US with over 480,000 accessible books, ONCE in Spain with over 50,000 accessible books or Tiflolibros in Argentina with over 45,000 accessible books to share their collections with other authorised entities and print-disabled persons in countries with limited or low capacity to produce accessible books.

Whichever option is adopted, the originating authorised entity is subject to a ‘good faith’ principle, that is, the condition that it had no knowledge (or reason to believe) that the accessible copy would be for someone other than the beneficiary.\textsuperscript{158} This condition thus addresses the publishers’ stated concern for abuse or piracy, which is at the heart of the common restrictions on disability access. An agreed statement to Art.5(2) states that, in the direct cross-border transfer of copies to a beneficiary person, an authorised entity may apply ‘further measures to confirm that the person it is serving is a beneficiary person and to follow its own practices.’ The combined effect of Art.5(2) and the agreed statement is that authorised entities are not subject to burdensome requirements such as recordkeeping or other administrative requirements in exercising the right to export copies to other countries. The explicit reference to ‘follow their own practices’ confirms that countries cannot impose additional measures that may inhibit the day to day activities of authorised entities. Moreover, unlike Art. 4, Art.5 does not permit countries to condition the export of copies on the commercial unavailability of the particular work in the destination country. Thus, the commercial availability requirement is not part of the conditions for the export of copies that a source country may impose.

---

\textsuperscript{158} Art.5(2)(b), Marrakesh Treaty.
The Marrakesh Treaty excludes some countries from the cross-border exchange system under Art. 5(4). This provision concerns situations in which a country that ratifies the Treaty is not at the same time party to another treaty that requires that country to comply with the three-step test. Thus, Art. 5(4)(a) provides that when an authorised entity in a contracting country receives an accessible copy and that country is not part of the Berne Convention, the authorised country will ensure that the copy is only ‘reproduced, distributed or made available for the benefit of beneficiary persons in that Contracting Party’s jurisdiction.’ For these ‘Berne gap’ countries there is no right to export. Similarly, Art. 5(4)(b) provides that the distribution and making available of accessible copies by an authorised entity shall be limited to that jurisdiction unless the contracting country is a party to the WIPO Copyright Treaty or otherwise its national law subjects E&Ls implementing the Marrakesh Treaty to three-step test, ie to certain special cases which do not conflict with the normal exploitation of the work and do not unreasonably prejudice the legitimate interests of the rightholder.

Art. 6 is the counterpart to Art. 5 in the sense that, if the Art. 5 exception exists for the print-disabled or an authorised entity to create an accessible copy in the contracting state, that country must also permit the importation of accessible copies for a beneficiary person, without permission from the rightholder. The wording ‘to the extent that the national law of a contracting party would permit’ suggests that, if that country permits authorised entities (but not beneficiary persons) to create accessible copies, that country would only be required to permit authorised entities to import such copies. Therefore, to maximise the potential for the Marrakesh Treaty to reduce significantly the global book famine, it is important that the laws in the source country and the destination country extend the exception to a beneficiary person so that an authorised entity in one country can supply an accessible copy directly to a beneficiary person in another.159 As stated above, the ‘flexibilites’ envisaged under Art. 4 may extend to the cross-border importation of accessible copies so that a country may decide to condition their import to the commercial availability and remuneration requirements. However, there are opinions arguing against adopting these optional clauses.

Luis Villarroel, who advised Chile and the Latin American countries behind the original proposal for the Treaty, argues that the condition of non-commercial availability should not apply to accessible format copies made for cross-border use as ‘this would be very burdensome or even impossible for the originating authorised entity to verify’ whilst the EIFL advising libraries around the world warns that ‘the practical effect would be to render the exception almost unworkable.’160 Indeed, in Australia which is one of the few countries with a commercial availability requirement, the Australian Blind Forum, Vision Australia and Australian Digital Alliance have recently written in their submissions on the draft bill to amend the Australian copyright law that bookshare in the US cannot reasonably comply with the commercial availability requirement test and would thus be unable to make their entire collection available in Australia.161 This chilling effect will clearly defeat the central purpose

160 Ibid pp. 9 and 19.
of the Marrakesh Treaty to create a global network for sharing accessible books across borders and increase their availability to all print-disabled persons.

Furthermore, Art.7 guarantees the proper enjoyment of the exceptions envisaged in Articles 4 to 6 by requiring states to ensure access by beneficiaries where rightholders use technological protection measures (TPMs). Although the Treaty does not mention how this is to be achieved in practice, it does require states to take ‘appropriate measures, as necessary.’ Whilst Art.8 guarantees the privacy of the beneficiary, Art.9 concerns cooperation to foster the cross-border exchange of accessible copies by encouraging information-sharing to assist authorised entities, including the possibility of a registry at WIPO. This provision encourages states to engage with TI networks such as ABC at WIPO, ETIN at EU level, or the local TI. In contrast, Articles 10 to 12 lay down general guidance on the general principles for interpreting and applying the Treaty. Thus, Art.11 outlines the various international forms of the three-step test that a contracting party must meet when adopting national implementing legislation. This must be read in conjunction with Art. 12, which preserves the freedom of contracting states to implement other copyright E&Ls for the benefit of the print-disabled not covered by the Marrakesh Treaty, including the possibility of maintaining any existing disability exceptions in national law.

As stated, a key characteristic of the Treaty is that it is not prescriptive regarding how states decide to implement these international obligations into their national copyright legislations. Rather, it merely offers suggestions but leaves it entirely up to the individual signatory to make the choice. Indeed, Art.10 explicitly preserves the freedom and sovereign discretion of contracting parties to determine ‘the appropriate method’ of implementing their Treaty obligations within their own legal system. Moreover, it implicitly adopts the principle of ‘flexibility’ on implementation which allows a contracting party to choose to develop new E&Ls that would apply domestically for the benefit of VIPs. Such additional copyright exceptions in no way affect those provided by national law and may even go beyond those provided by the Treaty, having regard to the contracting party’s ‘economic situation, and its social cultural needs, in conformity with [its] international rights and obligations.’

Crucially, these two provisions go a long way in addressing some academic opposition that, whilst accepting the need for a solution to the global book famine, expressed concerns about the potential for an international treaty on mandatory exceptions becoming a straightjacket for developing countries in the sense of proving ‘both unwieldy and inadaptable to inevitable changes in technological or economic conditions.’

Without doubt, the heart of Marrakesh is cross-border sharing of accessible books both between organisations and directly from organisations to blind or print disabled individuals without complicated requirements for checks on whether those books are commercial availability in the receiving country.
4.2. Signature

In June 2013, WIPO’s 187 states adopted the Marrakesh Treaty to Facilitate Access to Published Works for Persons Who Are Blind, Visually Impaired or Otherwise Print Disabled. As of October 2016, more than 80 countries had signed the agreement and 26 had ratified it, enabling the treaty to enter into force on September 30, 2016.165 The countries that have ratified it are India, El Salvador, United Arab Emirates, Mali, Paraguay, Singapore, Argentina, Mexico, Mongolia, South Korea, Australia, Brazil, Peru, North Korea, Israel, Chile, Ecuador, Guatemala, Canada, Saint Vincent and the Grenadines, Tunisia, Botswana, Sri Lanka. Canada’s ratification on 30th June 2016 enabled the Treaty to come into force. Although the EU signed the Treaty in April 2014 and the Member States did so the same year,166 there is yet to be formal ratification from the EU or its Members.

4.3. Ratification

As stated at the outset, ratification of the Marrakesh Treaty has stalled due to significant institutional disagreements over the nature of the competence, ie shared or exclusive competence. When the Commission first sought authorisation from the Council to negotiate an international agreement at WIPO, the Commission’s request highlighted the likelihood that any exceptions to copyright law required to improve access for the print-disabled would affect exclusive rights that are harmonised under the EU Copyright Directive. It thus envisaged that ‘the scope of a possible future international agreement would come within the scope of application of EU law and in any event within an area which is largely covered by EU rules.’167 The Commission therefore offered Art.3(2) of the Treaty on the Functioning of the EU (TFEU) as the basis for its recommendation for a Council Decision. However, the question of competence and nature of the Council Decision became a sensitive political issue for which the Permanent Representatives Committee (Coreper) was invited to discuss.168 It transpired there was fierce opposition in the Council about the form and the substance of the proposed Decision, with the first amended proposal authorising the Commission to negotiate only as regards matters within the EU’s competence and the Members States to participate on their own behalf only as regards matters within their competence.169

The Council Presidency then circulated a compromise proposal in which the form of the proposed text stated that a Decision would ‘be adopted by the Council alone and cover [...] solely matters falling under exclusive EU competence.’170 The Commission was finally authorised to negotiate an agreement ‘on behalf of the Union to the extent that the subject matter falls within the Union’s Competence’ and in close cooperation with the Member States.

166 Council Decision 2014/221/EU of 14 April 2014 on the signing, on behalf of the European Union, of the Marrakesh Treaty to Facilitate Access to Published Works for Persons who are Blind, Visually Impaired, or otherwise Print Disabled (OJ L115, 17.4.2014, 1)
168 EU Council Decision 12930/12 EXT1, PI 109, 20 September 2012
but with no further reference to the their competence. The compromise text was however subject to a statement from the UK that the Presidency would represent the views of the Member States regarding any matters falling outside the scope of this Council Decision. After a fragile compromise, the EU signed the Marrakesh Treaty on 14th April 2014. Yet the unresolved issue of the competence of the Member States would prove an insurmountable obstacle for ratification. The compromise text was however subject to a statement from the UK that the Presidency would represent the views of the Member States regarding any matters falling outside the scope of this Council Decision.

After a fragile compromise, the EU signed the Marrakesh Treaty on 14th April 2014. Yet the unresolved issue of the competence of the Member States would prove an insurmountable obstacle for ratification. The Commission first submitted a proposal for a Council Decision authorising the ratification of the Treaty on 21st October 2014, but was opposed by a minority of seven delegations forming a strong blocking minority in the Council. Proposals for ratification have been blocked ever since. The blocking minority’s concerns were about, on the one hand, the timing of ratification in the sense that they believe the EU must first adapt its copyright legal framework and, on the other hand, the legal basis of the proposed Council Decision in conjunction with the issue of competence (exclusive of the EU versus shared EU/Member States).

In statements published by the Council during discussions on a decision for signature, the Czech Republic, Finland, France, Germany, Romania, Slovakia and Slovenia considered that the Marrakesh Treaty is within the area of shared competence and, as such, it must be signed and concluded not only by the Union but also all the Member States. The basis for their argument was that the disability exception in Art.5(3)(b) of the Copyright Directive is an option for Member States, with the result that the Marrakesh mandatory exception goes beyond the EU harmonised framework under the Copyright Directive and affects the internal market, which falls under shared competence of the Union and its Member States. For these blocking minority, neither the legal basis of Art.3(2) nor Art.207 TFEU changes the form of a mixed agreement that the Marrakesh Treaty must take since even provisions of a secondary nature that fall outside the Union’s exclusive competence and within that of the Member States may still render the agreement of shared competence.

On the other hand, Poland and the UK abstained the signature and rejected Art.207 as the proper legal basis, both agreeing that the Union did not have exclusive competence but for different reasons. Whilst Poland believed that shared competence was grounded upon Art.114 (internal market), read in conjunction with Art.19 (discrimination) TFEU, the UK rejected the reliance on Art.207 altogether because common commercial policy is not the Treaty’s primary objective but declined to point to the relevant legal basis. The Commission, however, has consistently argued that the Treaty’s ratification falls within the Union’s exclusive competence but it has been hardly consistent in its choice of the legal basis,

---

177 Ibid
sometimes proposing Art.3\textsuperscript{178} and other times proposing Art.114 and 207 TFEU as the dual legal basis.\textsuperscript{179} For the Council’s Legal Service, Art.207 is not only the substantive legal basis but also the most appropriate one, though reported discussions do not explain why.

In 2015, the divergent positions in Coreper became far more entrenched. Following the Commission's paper outlining its preliminary views on the possible ways of implementing the Marrakesh Treaty,\textsuperscript{180} the delegations considered paper too vague and falling short of a necessary concrete legislative proposal. The principal reason for opposition, however, was the persistent view of 'a larger number of delegations' that ratification should only proceed 'until the internal EU legal framework has been adjusted accordingly' which the Commission had not yet submitted.\textsuperscript{181} This is a questionable argument which many academics reject, pointing to the adoption of new rules without prior adjustment of the copyright framework.\textsuperscript{182} Yet a similar large number of delegations continued to insist on the shared EU/national competence of the treaty, with at least some of them indicating their intention to ratify it unilaterally even if the Commission disagreed with this unilateral approach. It was evident that the timing and legal basis remained outstanding issues for a growing number of Member States.

As a result of the impasse, Coreper decided to suspend the proposal for ratification and agreed to recommend to the Council to request the Commission 'to submit, without delay, a legislative proposal to amend the EU legal framework so that it complies with the Marrakesh Treaty.'\textsuperscript{183} However, having considered the concerns of the blocking group and the willingness of a considerable number of delegations to proceed with ratification, the Presidency decided to table 'a pragmatic compromise proposal' which purported to allow the Member States to ratify the Treaty alongside the EU and, at the same time, address concerns about the voting rights of intergovernmental organisations under Art.13(3)(b) Marrakesh.\textsuperscript{184} But even that compromise proposal was vehemently opposed by 'seven delegations forming a strong blocking minority.'\textsuperscript{185} On May 20\textsuperscript{th} 2015, the Council adopted a decision requesting the Commission to issue a legislative proposal with a view to amending EU copyright law as a pre-condition for ratification. The EBU issued a statement calling on the blocking minority in the Council led by Italy and Germany to support swift ratification on the basis of their commitments under the CRPD.\textsuperscript{186}

For its part, the EU Parliament has several times called on the Commission and the Council to speed up the ratification process in Parliamentary discussions\textsuperscript{187} and has even

passed a resolution expressing its ‘profound indignation’ at the deadlock.\textsuperscript{188} At the outset of drafting this Study, a questionnaire was submitted to the EU Permanent Representations in an attempt to gain more insights into their persistent opposition to ratification (see Annex). Unfortunately, only one reply was received without concrete answers to our questions.

Against this background, in July 2015 the Commission submitted a request to the Court of Justice of the EU (CJEU) to deliver an opinion on the nature of the EU’s competence for ratification. Although the CJEU has yet to issue its opinion, the Opinion of AG Wahl was published on 8 September 2016.\textsuperscript{189} In his Opinion, the AG set out to do two things, namely the identification of the correct substantive legal basis (or bases) and then the determination of the nature of the competence exercised by the EU. Under EU treaties, the choice of the correct legal basis for the proposed act is of ‘constitutional significance’ for several reasons: it establishes whether the Union has the power to act, for what purpose and the procedure it must follow. The indication of the legal basis thus policies the division of powers between the Union and the Member States.\textsuperscript{190}

According to the Opinion of the AG, the Commission (supported by the Parliament) submitted that the dual legal bases rested on Articles 114 and 207 TFEU due to the harmonising effect which the Marrakesh Treaty will have on EU copyright law and the commercial nature of cross-border distribution between contracting parties, and between the EU and third parties. Regardless of the legal provision, the Commission nevertheless maintained that the Union’s competence is exclusive under Art.3(2) due to the effect upon the scope of the copyright rules introduced by the Copyright Directive.\textsuperscript{191} On the other hand, the Czech Republic, Finland, France, Lithuania, Hungary, Romania and the United Kingdom all contended against the existence of the Union’s exclusive competence as the conditions in Art.3(2) were not fulfilled.\textsuperscript{192} Their views however differed significantly as regards the substantive legal bases for ratification. Yet, according to the AG Opinion, none of them actually identified the correct legal bases following the settled case-law of the CJEU by reference to the aim and content of the proposed measure.

In the AG’s view, the decision to conclude and ratify the Marrakesh Treaty should have a dual bases, ie Articles 19(1) and 207 TFEU. Under the former, the anti-discrimination component on grounds of disability represents the ultimate purpose of the Treaty and this rationale is in turn linked up with the duty to remove IP laws acting as discriminatory barriers under the CRPD. Indeed, for the AG the Treaty can be regarded ‘as implementing the commitment undertaken in [Art.30(3) CRPD],’\textsuperscript{193} which was precisely the driving force of the WBU/BEUM Proposal. Similarly, Art.207 grants exclusive competence on the Union in matters of common commercial policy, which includes ‘commercial aspects of IP’. According to Daiichi Sankyo in which the CJEU interpreted for the first time the scope of Art.207, the common
commercial policy which falls within the Union’s exclusive competence relates to ‘trade with non-member countries, not to trade in the internal market’ and must therefore be defined broadly in accordance within its open nature. In the field of IP rules, the AG recalled that the CJEU has held that ‘only those [aspects] with a specific link to trade are capable of falling within the field of the common commercial policy.’ This link is evidently present in several Marrakesh obligations regarding cross-border distributions (exports and imports) and cooperation to facilitate such activities. These provisions ‘are intended to promote, facilitate and govern trade in a specific type of goods: accessible format copies.’ This follows from the reasoning of the CJEU in Daiichi Sankyo which declared the rules in the TRIPs Agreement as falling within the commercial aspects of IP under Art.207 TFEU. Daiichi Sankyo thus brought the field of the common commercial policy in line with the sphere of operation of WTO, overturning previously restrictive case-law on the scope of the EU’s external competence concerning international trade agreements.

Despite the fact that an international trade agreement may pursue multiple objectives, it is possible for the content of that agreement to be dominated by one or two of them and thus provide the substantive legal basis even in the presence of other ancillary aims. Whilst several aims may be achieved by the effective implementation of the Marrakesh Treaty, ie humanitarian, development, social policy, increased harmonisation of the internal market, commercial aspects, non-commercial aspects, anti-discrimination, etc., for the AG the ‘centre of gravity’ is found in Articles 19 and 207 TFEU. These dual legal bases mean that the nature of the EU’s competence is both exclusive (regarding Art.207) and shared (regarding Art.19). However, this finding does not necessarily mean that the Treaty must be concluded as a ‘mixed agreement.’ When the content of an agreement falls within an area of shared competence, ‘the choice between a mixed agreement or a EU-only agreement...is generally a matter for discretion of the EU legislature.’ In principle, a mixed agreement is necessary where the parts covering shared and exclusive competence are of equal weight. In the analysis of the AG, this is hardly the content of the Marrakesh Treaty.

Nevertheless, when a competence which may be shared is internally exercised by the Union, it is possible for that competence to become exclusive externally on the basis of the additional source of competence prescribed in Art.3(2) TFEU. In the view of the AG, this is precisely the case for the Marrakesh Treaty. Art. 3(2) confers exclusive competence upon the Union when the conclusion of an international agreement ‘may affect the common rules or alter their scope.’ This would normally be the case where there has been complete EU harmonisation of an area covered by an international agreement though ‘complete’ harmonisation is not a necessary precondition for the EU’s exclusive competence to arise. This was established in the 2014 Broadcasting Rights decision, which this Study included

199 A-3/15 Opinion Procedure (n 4) at [119]
200 C-114/12 European Commission v European Parliament, [2014] CJEU, at [69] (A finding that there is a risk that EU rules might be adversely affected by international commitments, or that the scope of those rules might be adversely altered, ‘does not pressupose that the areas covered by the international commitments and those covered by the EU rules coincide fully.’).
in Question 4 of the Questionnaire circulated, in which the CJEU interpreted the newly added Art.3(2) by the Lisbon Treaty. In this decision, the CJEU rejected the argument that since the entry into force of the Lisbon Treaty the exclusive competence of the Union was viewed in a more restrictive manner. Following this case, the AG Opinion repeated that, for the EU’s implicit competence to arise, ‘what is crucial…is whether the area covered by the international agreement is already largely covered by EU rules so that any Member State competence to act externally in respect of that area would risk affecting those rules.’

In this case, the mandatory Marrakesh exceptions correspond to an area largely covered by EU rules even in the absence of complete harmonisation. This is confirmed by the fact that the exceptions in Art.5 Copyright Directive are optional, are largely EU-regulated in the sense of being exhaustive and are subject to the three-step test. Furthermore, the AG observed that the CJEU’s interpretation of certain concepts in Art.5 as being autonomous concepts of EU law lends further support to his view. In fact, in one of the CJEU’s cases referred to in the AG Opinion, the optional nature of the exception in Art.5 (ephemeral recordings of works made by broadcasting organisations by means of their own facilities) to the exclusive right of reproduction harmonised in Art.2 Copyright Directive did not preclude the Court’s interpretation that ‘the EU legislature is deemed to have exercised the competence previously devolved on the Member States in the field of Intellectual Property.’

Within the scope of the Copyright Directive, the EU is thus deemed to have taken the place of the Member States, which may no longer exercise their own discretion conferred under international agreements such as the Berne Convention. Though the EU is not a party to this Convention, it is nevertheless obliged under Art.1(4) of the WIPO Copyright Treaty (WCT) to comply with Articles 1 to 21 of the Berne Convention. It is precisely some of these exclusive rights recognised in the Berne Convention/WCT that are affected by the mandatory Marrakesh exceptions to national copyright laws for print-disabled people. The AG therefore concluded that the Marrakesh ratification will affect common rules largely occupied by EU law which triggers the Union’s exclusive competence under Art.3(2) TFEU.

Therefore, whichever route is followed, ie Article 3(2) or Art.207 TFEU, the EU has a wide scope of action regarding IP rights. Academic opinions agree with the AG Opinion’s interpretation of the competence issue as being supported in the settled case-law of the CJEU. Whilst the AG Opinion is fully supportive of the Union’s exclusive competence, there is arguably some basis for thinking that his views are less supportive of claims for Marrakesh ratification without the need for adjusting the EU copyright framework. In fact, in passing he acknowledges the Council’s request from the Commission to submit a proposal to amend copyright so as to give effect to the Marrakesh obligations and agrees that, once that amendment is adopted, the Union will have legitimately exercised its competence. His passing comments are however limited to amendments to the optional disability provision, not to the entire legal instrument.

202 Ibid at [141], citing C-201/13 Deckyman v Vandersteen, [2014] CJEU (At [16], the CJEU ruled that the optional nature of the parody exception in Art.5(3)(k) Copyright Directive does not prevent the concept of ‘parody’ from being an autonomous concept of EU law and thus interpreted uniformly, rather than by reference to national law.)
203 C-510/10 DR, TV2 Danmark A/S v NCB, [2012] CJEU, at [31]
204 Ibidem
207 Ibid at [143], [149]
An important issue absent from the Opinion of the AG is that, for the purpose of the specific analysis of the relationship between the international agreement and the EU law in force, the onus of proof is upon the party claiming exclusive implied competence under Art.3(2) TFEU. Here, when the Commission submitted its 2014 Proposal for a Council Decision on the conclusion of the Marrakesh Treaty, it cited the legal provision forming the substantive legal basis including further supporting evidence and justification, as required in the *Broadcasting Rights* decision.\(^{208}\) According to some academics, one way in which the Commission’s obligation to provide evidence that the Union’s exclusive competence has been established is to refer to relevant case-law of the CJEU.\(^{209}\) Overall, academic comments point out that the CJEU has recently tended to favour assessments that support a finding of exclusive competence and this Study endorses these views.\(^{210}\) Some have even suggested that the institutional disagreement over the competence was simply a non-issue that should never have delayed ratification, raising the question of whether this is in fact a lack of political will in disguise\(^{211}\) and similar views have been expressed in Parliamentary discussions over the ratification impasse.\(^{212}\) It would be unfortunate if this was the case but following the AG Opinion and the CJEU’s cases relied upon, the EU and its Member States should immediately begin the ratification process without delay.

---

\(^{208}\) C-114/12 *European Commission v European Parliament*, (n 200) at [75]-[99]. Here, however, in its 2014 Proposal for a Council Decision the Commission cited Art.114 TFEU (Internal market component) rather than Art.3(2), as established in the *Broadcasting Rights* case and as followed by the AG Opinion. This proposal should be amended to reflect this. See COM(2014) 638 final, 21 October 2014, p.5

5. CONCLUDING REMARKS

KEY FINDINGS

- Copyright reform is not a condition for the ratification of the Marrakesh Treaty.
- The Commission’s proposals for a Directive and a Regulation adopt the most generous provisions of the Marrakesh Treaty and make use of Treaty’s exceptions-plus character, though some aspects may need some clarification.
- The Marrakesh Treaty is a triumph for the social model of disability.

5.1 Copyright Reform Package

The urgent need for reassessment of the essential role of E&Ls is highlighted in a recent non-binding resolution by the European Parliament supporting the revision of the Copyright Directive and outlining its position about the way the copyright acquis in the EU should be revised and developed. Following a report published in January 2015 (the Reda Report) that drew upon a consultative process with users,\(^\text{213}\) the resolution aims to assess the implementation of key aspects of EU copyright law and its passage cleared the way for the Commission to develop strong and ambitious reform proposals to modernise copyright in the digital age that draws upon and include the key points raised by the Parliament.\(^\text{214}\) One important statement is the strong call for ‘any legislative initiative to modernise copyright [should] be preceded by an exhaustive ex-ante assessment of its impact in terms of growth and jobs, as well as its potential costs and benefits.’\(^\text{215}\) This evidence-based approach to policy-making applies to the creation of both new rights and E&Ls. On this basis, the Parliament’s resolution called on the Commission ‘to examine the possibility of reviewing a number of the existing exceptions and limitations in order to better adapt them to the digital environment’ ensuring their ‘technological neutrality and future-compatibility...’\(^\text{216}\)

Whilst stating that ‘some exceptions and limitations may...benefit from more common rules’ for which the Commission should ‘examine the application of minimum standards across exceptions and limitations’,\(^\text{217}\) the resolution does not go as far as the Reda Report which asked ‘to make mandatory all the exceptions and limitations referred to in [the EU Copyright Directive], to allow equal access to cultural diversity across borders within the internal market and to improve legal certainty.’\(^\text{218}\) Instead, Parliament called for the strengthening of exceptions such as libraries, museums and archives, and for the creation of a number of new exceptions such as text and data mining for search, research and education purposes which includes online and cross-border activities, e-lending for public libraries as well as an exception allowing libraries to digitalise content for consultation, cataloguing and archiving.

\(^\text{217}\) Ibid at [37-38]
\(^\text{218}\) Reda Report, (n 213) at [11]
Although the resolution emphasised that ‘any legislative change...should guarantee people with disabilities access to works and services protected by copyright and related rights in any formats,’ (emphasis added) it fell short of calling for the existing optional disability exception to be mandatory despite strong calls from academics[^219] and disability groups for a mandatory disability exception in line with the binding Marrakesh obligations.[^220] The Resolution did however call for swift ratification of the Marrakesh Treaty 'without making the ratification conditional upon the revision of the EU legal framework.' Whilst some academics have welcomed the importance of the Parliament’s initiative, they have described the resolution as ‘a missed opportunity to make a stronger statement on some essential issues of copyright law in the EU’ since it is ‘less ambitious and courageous in several regards than the original Draft Report proposed by the Rapporteur.’[^221]

Indeed, the Reda Report had called for a mandatory harmonised framework of E&Ls (which other Parliamentary Committees fully supported)[^222] alongside the adoption of an open norm introducing flexibility in the interpretation of this mandatory framework which was modelled on the existing three-step in Art.5(5) of the Copyright Directive.[^223] The Reda Report’s proposals were not new as they had already been proposed in an earlier study on the Directive which offered as a solution to improve copyright a two-tiered approach to E&Ls. Under this 2007 study, the EU legislator might first provide a shorter list of mandatory limitations reflecting fundamental freedoms, internal market considerations and user rights, and secondly, it could adopt an open norm leaving Member States freedom to provide additional limitation following the three-step test.[^224] Yet none of these proposals were included in the Parliament’s resolution. More importantly, however, academic opinions refer to some ‘polarised and, sometimes, contradictory statements’ in the final text of the resolution, particularly the emphasis on evidence-based norm-setting and the ideologically charged statements that any copyright reform should be based upon a high level of protection, which makes Parliament’s message to the European Commission far from easy to follow.[^225] Similarly, like numerous scholars before, these academics continue to argue that ‘a more unified approach to copyright law in the EU seems crucial for the development of a truly European information society.’[^226]

Following the EU Parliament’s resolution and the conclusions of the European council meeting in June 2015, the Commission published its roadmap on the modernisation of the EU copyright rules. The Commission specifically highlighted its commitment to ensure 'equal access for persons with disabilities in the digital environment' whilst providing a high level of

[^225]: C Geiger et al, (n 219) p. 685

[^226]: Ibid 683.
protection for rightholders. It presented a plan that included concrete actions with proposals for the very short term (ie portability of online services) and another set of proposals planned for 2016, which included legislation required to implement the Marrakesh Treaty. One area for intended legislative action was the fragmentation of copyright rules in the EU, particularly as regards exceptions which are optional for national governments to implement. According to the Commission, this was particularly problematic for exceptions that are closely related to education, research and access to knowledge, including ‘the optional nature and the lack of cross-border effect for the disability exception...’ The immediate effect of this is to ‘make it difficult for people with print disabilities to access special formats made under the copyright exception of another Member State.’ It thus proposed addressing this serious problem by ratifying and implementing the EU’s international commitment under the Marrakesh Treaty.

The Commission’s statement thus echoed one of the central responses from consumers and institutional users to public consultation on EU copyright reform that it conducted between December 2013 and March 2014. To the question of whether some or all of the exceptions should be made mandatory, the results report that, amongst end users, ‘it is a common view that exceptions, at least those linked to the exercise of fundamental rights (eg. Quotation and criticism, newsreporting, parody) should be made mandatory and harmonised’ whilst many others request ‘a basic set of mandatory exceptions for scientific research, education, cultural heritage, disabilities, libraries and archives.’ These views were largely shared by institutional users but not, needless to say, by stakeholders group who ‘see no evidence that mandatory exceptions would lead to better results...’ The stakeholders’ views are, however, contrary to empirical evidence published in previous reports. Moreover, the consumers’ views were also consistent with their answers as to their experiences with the use of the disability exception in the Copyright Directive. Several users and institutional users refer, in particular, to dyslexia being excluded from its scope by several EU Member States and the legal uncertainty about exporting and importing accessible books such as Braille, large print and audio books with special navigation tools. Other responses underline that the existing licence-based solutions in the market are insufficient to ensure equal access for disabled people. For these users Marrakesh ratification will satisfactorily address their concerns but they also recognise the need for generalising accessibility features in mainstream publishing, ie ePug3 format. This is precisely the purpose of the ‘born accessible’ initiative promoted by TIGAR, as discussed Part 3.

The responses to the Commission’s consultation are, unsurprisingly, consistent with another comprehensive study published by the European Parliamentary Research Group (EPRS) in the wider context of the review of the EU copyright framework. Broadly speaking,

---

228 Ibid p.7
230 2007 IVIR Study, (n 224) pp.51-52 (‘These divergences in the national legislation are not likely to be conducive to the development of viable business models aimed at the production and distribution of digital content that can cater to the needs of the physically impaired.’)
231 EU Commission, Report on the responses to the Public Consultation on the Review of the EU Copyright Rules, (n 229) pp.61-62
the EPRS study did not report anything that previous reports have not found. Overall, the study highlighted that the Copyright Directive has not been effective for neither the industry nor the users, and is ‘increasingly outdated in the light of the rapid pace of technological change...’ It particularly referred to the ‘fragmented picture’ that emerges from the implementation and scope of E&Ls in a selected number of Member States but, more importantly, such exceptions were found ‘increasingly misaligned with technological development, and the lack of an update limits the development of new, potentially high value added “welfare-enhancing” uses of information.’

The study identified a series of gaps that would require legislative intervention, stressing that ‘no action’ is simply not option. Although the study did not discuss the optional disability exception in great detail, it did identify an imbalance in the main copyright instrument in the sense that the vast majority of the exclusive rights was harmonised and adapted to the digital environment whilst the E&Ls were conceived as optional, thus increasing the risk of fragmentation and inefficiencies.

5.2. Commission’s Proposals for a Directive and a Regulation to Implement Marrakesh

It is against this background that the Commission’s copyright package was published in September 2016, which includes a Directive on Copyright in the Digital Single Market as well as two proposals for a Directive and a Regulation to implement the Marrakesh Treaty. The Copyright in the Digital Single Market Directive creates and harmonises new exceptions such as text and data mining exceptions, the digital use of works and other subject-matter for the purpose of cross-border teaching activities provided that it is for non-commercial purpose, and exception for preservation of cultural heritage. The Directive also creates new exclusive rights for the benefit of publishers of online publications, fair remuneration in contractual arrangements for authors and performers, and rights over the use of protected content on online platforms that provide storing and access to user-uploaded content (the so-called ‘value gap’ right). In the context of the aim to achieve wider availability of content across the EU, it is also worth mentioning the Commission’s proposal for the accessibility requirements for products and services by removing barriers created by divergent legislation.

The European Accessibility Act (EAA) takes into account important commitments under the CRPD and seeks to bring significant benefits for disabled people in terms of fewer barriers when accessing information goods and open labour market. E-books are among the areas of services and products included ‘in order to maximise their foreseeable use by persons with functional limitations, including person with disabilities.’ The EAA does not, however, define what an ‘ebook’ actually is. Whilst the EBU fully supports the proposal for removing unnecessary barriers for disabled people, it has offered some suggestions and requested some clarifications.

233 Ibid p.19
235 Ibid, Articles 11, 13 and 14.
With regard to implementation of the Marrakesh Treaty, the proposals for a Directive and a Regulation were published separately from the copyright package but are intended to be read together. Whilst the proposed Marrakesh Directive seeks to ensure the cross-border dissemination of accessible format copies through the EU, the proposed Marrakesh Regulation seeks to facilitate the exchange of such copies, between the Union and third countries that are parties to the Marrakesh Treaty, for the benefit of beneficiary persons. To achieve these aims, the proposal for the Marrakesh Directive makes the exception mandatory for Member States and will apply to rights harmonised at Union level that are relevant for making and disseminating copies, as defined in the Marrakesh Treaty. Under Art.1 the permitted uses introduced by the mandatory exception do not require authorisation from the rightholder. Art. 2 then provides a list of important definitions regarding the terms ‘work and other subject-matter’, ‘beneficiary persons’, ‘accessible format copy’ and ‘authorised entity’ that apply for the purposes of the proposed Directive, tracing very closely the definitions offered in the Marrakesh Treaty. It is also commendable that under Art.2 the list of beneficiary persons includes dyslexics, which should address the concerns raised in the Commission’s consultation. Moreover, Article 3 outlines the permitted uses as regards beneficiary persons and authorised entities. The permitted uses cover the right of the beneficiary (or a person acting on their behalf) to make an accessible format copy of a work or other subject-matter (as defined in Art.2) for their exclusive use, and the right of the authorised entity to make, communicate, make available, distribute or lend an accessible copy to a beneficiary person or another authorised entity. It is specifically stated that the exception should allow authorised entities to make and disseminate online and offline copies within the EU. Of note is that these permitted uses are more extensive than those envisaged under the Marrakesh obligations and extend also to the rights covered under the Rental and Lending Rights Directive and the Database Directive.

Similarly, Art.3(3) of the proposed Directive provides that the exceptions to TPMs under Art.6(4)(1), (2) and (3) as well as the three-step test under Art.5(5) of the Copyright Directive, will apply to the mandatory exceptions for authorised entities and beneficiary persons. In adopting the ‘safe harbours’ provided in the Marrakesh Treaty, the Commission’s approach treats the proposed mandatory exceptions as satisfing the three-step test, which is consistent with the analysis of those who have analysed the core provisions of the Treaty through the lens of the three-step test. Similarly, the removal of TPMs is consistent with

---

238 Proposal for a Marrakesh Directive, (n 5)
239 Ibid, Art.2:
(1) ‘work and other subject-matter’ means work and other subject-matter means a work in the form of a book, journal, newspaper, magazine or other writing, including sheet music, and related illustrations, in any media, including in audio forms such as audiobooks, which is protected by copyright or related rights and which is published or otherwise lawfully made publicly available;
(2) ‘beneficiary person’ means: (a) a person who is blind; (b) a person who has a visual impairment which cannot be improved so as to give the person visual function substantially equivalent to that of a person who has no such impairment; (c) a person who has a perceptual or reading disability, including dyslexia, (d) a person who is otherwise unable, due to a physical disability, to hold or manipulate a book or to focus or move their eyes to the extent that would be normally acceptable for reading;
(3) ‘accessible format copy’ means a copy of a work or other subject-matter in an alternative manner or form that gives a beneficiary person access to the work or other subject-matter, including allowing for the person to have access as feasibly and comfortably as a person without a visual impairment or any of the disabilities referred to in paragraph 2;
(4) ‘authorised entity’ means an organisation providing education, instructional training, adaptive reading or information access to beneficiary persons on a non-profit basis, as its main activity or as one of its main activities or public-interest missions.
240 Ibid, Recital 9.
241 Ibid, Art.3(2)
242 S Vezzoso, (n 151) p. 800
the obligations under the Marrakesh Treaty to ensure that such TPMs do not hinder the exercise of the privileged acts, though the proposal for the Marrakesh Directive does not articulate the mechanism to comply with this obligation, i.e., the right to hack and/or the right to claim. It may therefore be useful for the recitals to refer to the means that the Member States may employ to ensure that TPMs do not hinder the permitted uses in any way. Similarly, the permitted acts for beneficiary persons and authorised entities outlined in Art. 3(1) of the proposed Directive are considered fully compliant with three-step test which prevents Member States subjecting these privileged acts to that test. Furthermore, Art. 4 establishes the obligation to allow an authorised entity to carry out the permitted uses across Member States and to ensure that a beneficiary person or an authorised entity may have access to an accessible copy from an authorised entity established in any Member State, thus ensuring the widest cross-border distribution of copies. More significantly, under Art. 6 the mandatory exceptions under the proposal for a Marrakesh Directive will complement the existing optional exception under Art. 5(3)(b) of the Copyright Directive, which is left unchanged in order to offer Member States the freedom to continue to provide their existing disability exceptions or create additional permitted uses according to their own cultural, socio-economic needs and which are not covered by the new Directive.

On the other hand, the proposal for a Marrakesh Regulation introduces legislation 'specifically on the international exchange of accessible format copies for beneficiary persons.' Accordingly, the Regulation will ensure that accessible format copies that are made in any Member State in accordance with national provisions implementing the Marrakesh Directive may be exported to third countries outside the EU that are parties to the Marrakesh Treaty, including the import of such copies made in accordance with the Treaty in third countries. The legal basis for the proposal is Art. 207, which is in agreement with the Opinion of the AG. The substantive provisions parallel very closely those of the proposal for a Marrakesh Directive. Whilst Art. 3 allows an authorised entity established in a Member State the export of accessible format copies to third countries through distribution, communication or making available, Art. 4 allows for the import of such copies from third countries. These permitted acts should only be carried out on a non-profit basis by authorised entities established in the Union. However, Art. 5 imposes a number of obligations on authorised entities carrying out any of the permitted acts in Articles 3 and 4, namely

a) it distributes, communicates and makes available accessible format copies only to beneficiary persons or other authorised entities;

b) it takes appropriate steps to discourage the unlawful reproduction, distribution, communication and making available of accessible format copies;

c) it demonstrates due care in, and maintains records of, its handling of works and other subject-matter and of their accessible format copies; and

d) it publishes and updates, on its website if appropriate, information on the manner in which it complies with the obligations laid down in points (a) to (c).

---

243 Max Planck’s Position Paper on EU Implementation of the Marrakesh Treaty (n 182) pp. 714 (The right to hack entails the authorised entity being given the right to circumvent the TPMs whereas the right to claim entails that entity being given the right to claim from the rightholder the issuance of an accessible copy of the work.)

244 Recital 17, Proposal for a Marrakesh Directive, (n 5)

245 Proposal for a Marrakesh Regulation, (n 6)

246 Recital 3, Proposal for a Marrakesh Regulation, (n 6)
Furthermore, Art.5 creates an obligation on the authorised entity to provide the following information, on request, to any beneficiary person or rightholder:

(a) the list of works and other subject-matter of which it has accessible format copies and the available formats; and

(b) the name and details of the authorised entities with which it has engaged in the exchange of accessible format copies pursuant to Articles 3 and 4.

However, this set of obligations on authorised entities engaging in international exporting and importing are not applicable to authorised entities for their intra-EU exchanges. Nothing is said about why these obligations are limited to international exchanges. Perhaps the reason for these additional obligations is to adopt the four cumulative practices that an authorised entity must establish and follow under Art.2(c), which are referenced in the agreed statement to Art.5(2) of the Marrakesh Treaty in the context of the right to export accessible copies conferred upon authorised entities. However, as discussed in Part 4, the combined effect of Art.5(2) and the permissive language in the agreed statement is that contracting countries cannot impose significant burdensome requirements upon authorised entities in exercising the right to export copies to other countries. Arguably, these additional safeguards imposed under Art.5 of the proposal for a Marrakesh Regulation may help to minimise any potential resistance to the proposal but, if that is the case, it may also be useful to provide further explanation as to their intended purpose in the Recitals so as to ensure that any inhibitory effect upon authorised entities is minimised.247

Furthermore, the definition of 'authorised entity' does not refer to any official status or recognition of authorised entities. Art.2 of the Marrakesh Treaty refers to an entity that is authorised or recognised by the national government and it may therefore be appropriate to include some provisions to facilitate the identification and supervision of authorised entities. Similarly, there is no mention of any redress or complaints mechanism that Member States should put in place in cases where Marrakesh beneficiaries are not allowed the permitted exception. Such mechanisms are provided under Art.13(2) of the proposal for copyright in the Digital Single Market for the benefit of right holders whose protected works are stored on and accessed on platforms of user-uploaded content.

More importantly, the proposal for the Marrakesh Directive states that, in view of the specific nature of the exception, its targeted scope and the need for legal certainty, ‘Member States should not be allowed to impose additional requirements for the application of the exception, such as compensation schemes or the prior verification of the commercial availability of accessible format copies.’248 This decision is to be welcomed. As discussed in Part 3, the original proponents of the Marrakesh Treaty, the WBU, vehemently opposed a prior check on commercial (un)availability for being too bureaucratically burdensome and impossible to implement, particularly in countries where charities serving the blind have limited resources or lack specialised human resources to conduct searches. The Max Planck Institute’s position paper on the implementation of the Marrakesh Treaty calls for the EU to adopt the optional restrictions of commercial (un)availability and compulsory remuneration on the grounds that this would provide an incentive for European publishers to serve the market for accessible formats and avoid resistance from countries with an existing

247 Recital 5, Proposal for the Marrakesh Regulation, (n 6). At the moment, Recital 5 merely states that authorised entities that engage in the distribution or making available of accessible format copies should comply with ‘certain obligations’ but provides no cross-reference to the Marrakesh Treaty or further explanation as to the intended purpose of such obligations.

248 Recital 11, Proposal for a Marrakesh Directive, (n 5)
compensation scheme such as Germany.\textsuperscript{249} The paper argues that, given that welfare systems ensure that most VIPs in the EU countries have a reasonable standard of living, ‘it would be difficult to understand why those for whom the consumption of the works should be made possible, would not make certain contribution to this themselves.’\textsuperscript{250} At least one of the authors supporting this paper has also written that it was useful explicitly to leave the commercial availability requirement option in the Treaty in the light of ‘positive experience under national laws with the like provisions...’\textsuperscript{251} but without offering any concrete evidence for such a claim.

There are several problems with arguments of those supporting the Max Planck’s position paper. Firstly, the paper ignores the additional cost and considerable resources required to create accessible copies appropriate for the print-disabled to navigate according to their specific needs, as recognised in the preamble to the Marrakesh Treaty. In its guide, the EIFL stresses that ‘the work has already been purchased, the accessible format copy is made for the sole purpose of providing equal access to the work, and the activity is undertaken on a non-profit basis.’\textsuperscript{252} Indeed, the Sullivan Study found that a large majority of countries had chosen a pure, non-remunerated exception which is limited to non-profit making activities such as those of charities and institutions serving VIPs.\textsuperscript{253} Similarly, in Europe only a minority of member states have introduced fair compensation schemes.\textsuperscript{254} It is therefore questionable that for such a small number of EU countries it is worth imposing additional transaction costs that might impact negatively on the stated aim of improving the availability and cross-border exchange of accessible books for the blind. Secondly, as far as the commercial availability requirement is concerned, the Sullivan Report also found that only a few countries have exceptions which do not permit a work to be used where there is already a commercially available format to the visually impaired.\textsuperscript{255}

One of those countries is Australia where the Australian Law Reform Commission (ALRC) recently described the requirement for an organisation to check commercial availability before making each copy as ‘pointlessly onerous’ which has resulted in Australia being out of step with other countries that have developed a digital repository of accessible copies.\textsuperscript{256} The ALRC therefore recommended that the commercial availability requirement should be reconsidered, replacing it instead with a fair use clause or a fair dealing exception for disability access. During the Marrakesh Treaty consultation, organisations representing Australian educational institutions submitted that the requirement simply operates as a roadblock to schools and universities providing print-disabled students with accessible content in timely fashion\textsuperscript{257} whilst those providing services for blind people reported that ‘the

\textsuperscript{255} Sullivan Study (12) p.111 (In even fewer countries, the test is not just whether or not there is a commercially available accessible copy, but also ‘whether it has been possible to obtain that copy after a reasonable investigation or efforts, in a reasonable time and at an ordinary commercial price.’).
\textsuperscript{256} ‘Copyright and the Digital Economy’, Australian Law Reform Commission Report 122, 13 February 2014, pp. 358-363. (This is particularly the case when the work is frequently requested and is never likely to be available in the relevant format.)
most significant barrier that [Vision Australia] currently experiences in producing and distributing books in alternative formats is the obligation to comply with...the commercial availability test...”¹²⁵⁸ The situation is exacerbated by the fact that the statutory licence is not format-specific in the sense that, if one of the five accessible formats listed in the Copyright Act is commercially available, the exception does not apply despite the available format being completely unsuitable or inferior from the point of view of the particular print-disabled. Even though the relevant Parliamentary committee noted that in Australia only 5% of print material is available in a format that VIPs can access, it accepted the Government’s proposal to adopt the commercial availability requirement which was published in the National Interest Analysis consultation.²⁶⁹

In its recently published exposure draft of the Copyright Amendment Bill, the Australian Government is proposing two separate, fair dealing exceptions, one for institutions assisting persons with disabilities and one for use by individuals. The commercial availability requirement does not apply for individuals but only for institutions which must be satisfied that the material cannot be obtained in the relevant format ‘within a reasonable time at an ordinary commercial price.”²⁶⁰ The Government’s position for maintaining this requirement is ‘to avoid...closing off the commercial arrangements where this can occur. We do not want to create a playing field that is effectively biased against commercial providers.”²⁶¹

The Sullivan Report observed that a commercial availability requirement may be essential if the aim is to encourage publishers to produce accessible publications for everyone. Whilst this concern is acknowledged in the preamble of the Marrakesh Treaty, it is not the Treaty’s central purpose and to condition the permitted acts largely upon the need to secure future markets and provide incentives for publishers not only mischaracterises the stated aim of that Treaty but it also undermines the Treaty’s overriding human rights objective in response to the obligation to ensure access to cultural materials without unreasonable or discriminatory barriers under the CRPD. The fact that the Marrakesh Treaty provides no mandatory obligation to any ‘commercial availability’ confirms this reading. It must be recalled that the reason why the Treaty was adopted is because of a persistent market failure on the part of publishers who simply do not regard the market for accessible books profitable enough. In fact, the evidence in the UK where a commercial availability requirement has existed since 2002 shows that just over 7% of all books published from

---

2006-2010 were found to be fully accessible, that is, commercially available in all three formats of unabridged audio, braille and large print. The report also shows that just 0.25% of titles were fully accessible in traditional formats (hard copy braille, hard copy large print, human voice audio) with an increase of 6.80% accessible as e-books. When compared with a similar study published in 2004, the report found a slight, but statistically significant, fall in the proportion of titles that cannot be available in any traditional accessible format. Though the inclusion of accessible e-books makes a considerable impact on availability, VIPs are still unable to access 80.25% of titles in any accessible format.

These empirical findings make grim reading for those national governments concerned about the absence of commercial availability in the proposed Directive, like the UK Government which has expressed its reservations about the removal of the incentive for publishers to invest in accessible format works. Given these findings alongside the narrowly defined category of beneficiary persons, some have argued that the Marrakesh exceptions are unlikely to conflict with the normal exploitation of the copyright work under the three-step test as there remain sufficient incentives for publishers to enter the market for accessible formats targeting specific user needs. There is also the fact that, within the EU, only two countries are reported as having a commercial availability requirement (the UK and Austria), which makes it undesirable to extend this controversial requirement to all Member States for the sake of preserving the status quo of the very few and to the detriment of undermining the fundamental right of the print-disabled to read and have access to information on an equal basis. The Commission’s proposal to exclude prior verification of commercial availability and compensation schemes is therefore consistent with the spirit and overriding purpose of the Marrakesh Treaty.

5.3 Conclusions

In many respects, the Marrakesh Treaty is the result of a backlash that followed the unrelenting expansion of TRIPS-plus standards in bilateral and multilateral trade agreements in early 2000. Not only did this backlash manage to mobilise a wide range of actors such as civil society groups, disability activities, NGOs, UN human rights bodies, and developing countries but it also prompted scholars to offer valuable suggestions for reform.\(^{267}\) One of these academic proposals focussed on the internal limitations within the copyright systems, particularly the vital role of E&Ls on the rights of copyright owners. Some academics have thus proposed a soft law instrument delineating E&Ls as one way of restoring the proper place of user rights in order to achieve copyright’s wider public interest goals of knowledge diffusion. This focus on E&Ls was intended to restore the public interest components of IP policy and transform TRIPS (and its progeny) into a more balanced instrument. As protection for the rights of copyright owners and producers occupied the central motivation for expanding IP norms, one way to counter the expansion was to articulate the rights of users in equivalent detail and with equal standing. Thus, scholars, NGOs, UN agencies and developing countries converged in promoting the same access rights for users agenda which provided the impetus for a treaty on mandatory exceptions such as Marrakesh. In direct opposition to the ‘floors’ created by the minimum rights prescribed in TRIPS, these calls for access rights through mandatory exceptions impose ‘ceilings’ on the one-way ratchet of IP standards.\(^{268}\)

If the human right of equal access to cultural knowledge is to be fully realised, the law must go further than ensuring books for the VIPs and specific classes of print disabled persons. The EU should take the lead in championing the need to adapt IP laws to promote and serve the basic human rights of all disabled people. Those who have concluded that an international agreement on E&Ls is possible within the confines of the international copyright acquis have noted that one of the successful features of such an endeavour is the breadth of its membership. If only a few countries join and the membership reflects largely a particular group, ie developing countries, this ‘could imperil the legitimacy and credibility of the international solution.’\(^{269}\) The Marrakesh Treaty is an international solution to the global book famine and for that solution to work it requires a broad-based membership. EU accession and ratification is thus imperative. The WBU has thus declared that it is vital that the major producers of accessible works, such as the EU and the US, ratify the treaty immediately.\(^{270}\)

Those who have mapped the time periods of the contested and evolving relationship between human rights and IP describe the most recent period as involving international law-making initiatives to codify mandatory ceilings on IP protection in multilateral treaties, with Marrakesh Treaty being the most important development. Helfer calls the Treaty ‘a watershed

\(^{269}\) P Bernt Hugenholtz and R Okediji, ‘Contours of An International Instrument on Limitations and Exceptions’ in NW Netanel (ed), *The Development Agenda* (OUP, 2009) 490

in multiple respects.'\(^{271}\) From an IP perspective, it is ‘the first international agreement focussing on mandatory exceptions to IP protection rules.’\(^{272}\) From a human rights perspective, it marks ‘the first time that the realisation of human rights law has been the explicit objective of a treaty negotiated under the auspices of WIPO.’\(^{273}\) From a disability perspective, it represents ‘a [concrete] step towards fulfilling international obligations of state parties to the UNCRPD,’ particularly the duty under Art.30(3) to ensure access to knowledge on an equal basis.\(^{274}\) But more importantly, it is a triumph for the social model of disability that seeks to further disabled people’s empowerment through the eradication of inequalities and socially constructed barriers around access to information, knowledge and education as the driving force behind the CRPD.\(^{275}\) For disability activists, a visual impairment like the one the Marrakesh Treaty aims to alliviate ‘may be a human constant but “disability” need not and should not be.’\(^{276}\) For other scholars seeking to integrate the human rights and IP regimes as a way to resolve tensions between the two, the Marrakesh Treaty provides a concrete illustration of this ‘integrationist’ approach, namely ‘it employs the legal policy tools of copyright law to advance human rights ends.’\(^{277}\)

\(^{277}\) L Helfer, ‘Human Rights and Intellectual Property: Mapping an Evolving and Contested Relationship’ (267); See also, P Yu (n 39) 1114 (Supporting the ‘progressive realisation’ approach to determine how states can meet their obligations under international human rights instruments such as the UDHR and the ICESCR by asking not only what can be protected but also ‘how it can be protected in a way that would allow for the progressive, or even full, realisation of other human rights.’)
6. RECOMMENDATIONS:

6.1 Recommendations to the EP/PETI:

- Press for the swift ratification of the Marrakesh Treaty without any delay and without awaiting reforms of European copyright law, sending a clear message to the world that the EU is a champion of the human rights of print disabled people and fully committed to cooperating with other countries to end the global book famine.
- Work with the European Disability Forum (EDF), International Disability Alliance (IDA) and WIPO to assess barriers that disabled people with impairments not covered by the Marrakesh Treaty may face in having access to content and cultural materials.
- Explore the possibility of going further than the mandatory floor established by the Marrakesh Treaty by working closely with disability organisations such as the EBU to assess if there exist other accessibility barriers for VIPs that could be removed through other more extensive exceptions and limitations. The EBU and its members have valuable expertise that policy makers can use in furthering the stated aims of the Marrakesh Treaty and the CRPD when designing EU copyright norms.
- Consider assessing the impact that excluding exceptions to copyright materials such as audio-visual and cinematographic works (ie films, documentaries, etc) may have upon the empowerment right of VIPs to access knowledge and cultural participation on an equal basis. The duty of states under Art.30(3) CRPD covers any intellectual property right that could constitute a discriminatory or unreasonable barrier to access cultural materials irrespective of the medium or the form that the cultural expression may take.
- Support and engage actively with private sector initiatives that complement the Marrakesh aims of ending the global book famine such as Accessible Book Service’s (ABC) initiative called the ‘born accessible’ publications, which seeks to create products that are usable from the start by both sighted persons and the print disabled as a way to promote inclusive publishing and increase the number of works in accessible formats.
- Support, together with the Commission and Member States, ABC and WIPO and help them to expand their global online catalogue of books in accessible formats and provide technical assistance through capacity building projects in developing countries. The WBU is actively involved and fully supportive of ABC’s activities.

6.2 Recommendations to the Commission:

- Press ahead with EU ratification of the Treaty, notably after the Opinion of the AG clears the way for the exclusive competence of the Union.
- After ratification, provide Member States with detailed guidance on implementing the provisions of the ‘Marrakesh Directive’ in order to ensure uncomplicated and effective exchange of accessible format copies within the single market.
- Consider selecting copyright rules and Article 30 of the CRPD as a focus of a meeting of the Disability High Level Group as part of the Commission’s monitoring and policing duties.
- Support the establishment of a mechanism for legal remedies against violations of the rights under the Directive and the Regulation in order to ensure effective application of their provisions or, at the very least, a complaints mechanism for beneficiaries and
authorised entities, having regard to the obligation under Art.10(1) to adopt any ‘measures’ to ensure effective application of the Marrakesh Treaty.

6.3 Recommendations to Member States:

- Support and work constructively with the Commission on the current proposals for a Marrakesh Directive and Regulation seeking to implement and ensure full application of the Marrakesh Treaty obligations, bearing in mind the Treaty’s historic character and its distinct blend of universal human rights/disability rights and IP ceilings.
- Establish a mechanism to ensure that the objectives of the Marrakesh Treaty are actually achieved in practice. To this end, Member States could rely upon Art.33 CRPD independent monitoring bodies and their national IP Office to comply with their duty under Art.10(1) Marrakesh Treaty ‘to adopt measures necessary to ensure application of this Treaty.’
- Authorise these monitoring bodies to enforce the national measures adopted and assess the extent to which beneficiaries and authorised entities are effectively enjoying the rights provided under the Directive/Marrakesh Treaty.
- Work closely with local organisations representing VIPs to produce an action plan outlining measures, objectives and concrete steps to achieve increased accessible format copies and collect data regarding such access, including the publication of information on the authorised entities established in the territory.
- Build links and share information about good practice with other Member States in order to create a combined front for the effective implementation of the Directive and full realisation of the Marrakesh commitments and goals.
- Support the European Accessability Act and work closely with the EU to fine-tune the proposed legislation on accessibility of products and services so as to reduce the number of inaccessible e-books and thereby fulfil the promise under Art.9 CRPD ‘to enable persons with disabilities to live independently and participate fully in all aspects of life.’

## ANNEX 2: EU LEGAL BASIS FOR MARRAKESH

<table>
<thead>
<tr>
<th>Issue</th>
<th>Legal Basis</th>
<th>Text of the Legal Basis</th>
</tr>
</thead>
</table>
| **Negotiation of the Marrakesh Treaty** | - Commission proposed Article 3(2) TFEU (exclusive competence)  
- Member States in the Council disagreed and supported shared competence  
- compromise: Commission negotiates for aspects falling under EU competence, in coordination with MSs | Article 3  
1. The Union shall have exclusive competence in the following areas:  
(... (e) common commercial policy.  
2. The Union shall also have exclusive competence for the conclusion of an international agreement when its conclusion is provided for in a legislative act of the Union or is necessary to enable the Union to exercise its internal competence, or in so far as its conclusion may affect common rules or alter their scope. |
| **Signature of the Marrakesh Treaty** | | |
| **Ratification of the Marrakesh Treaty** | - Commission proposed Article 3(2) TFEU (exclusive competence)  
+ Article 207 TFEU (Common commercial policy)  
- blocking minority in the Council (CK, FI, FR, DE, RO, SK, SL): first modify the Copyright regime; shared competence (PL: 114 + 19 TFEU; UK: shared competence, no Art. 207)  
- Council legal service: Article 207 | Article 207  
1. The common commercial policy shall be based on uniform principles, particularly with regard to changes in tariff rates, the conclusion of tariff and trade agreements relating to trade in goods and services, and the commercial aspects of intellectual property, foreign direct investment, the achievement of uniformity in measures of liberalisation, export policy and measures to protect trade such as those to be taken in the event of dumping or subsidies. The common commercial policy shall be conducted in the context of the principles and objectives of the Union's external action.  
2. The European Parliament and the Council, acting by means of regulations in accordance with the ordinary legislative procedure, shall adopt the measures defining the framework for implementing the common commercial policy. |
3. Where agreements with one or more third countries or international organisations need to be negotiated and concluded, Article 218 shall apply, subject to the special provisions of this Article.

The Commission shall make recommendations to the Council, which shall authorise it to open the necessary negotiations. The Council and the Commission shall be responsible for ensuring that the agreements negotiated are compatible with internal Union policies and rules.

The Commission shall conduct these negotiations in consultation with a special committee appointed by the Council to assist the Commission in this task and within the framework of such directives as the Council may issue to it. The Commission shall report regularly to the special committee and to the European Parliament on the progress of negotiations.

4. For the negotiation and conclusion of the agreements referred to in paragraph 3, the Council shall act by a qualified majority.

For the negotiation and conclusion of agreements in the fields of trade in services and the commercial aspects of intellectual property, as well as foreign direct investment, the Council shall act unanimously where such agreements include provisions for which unanimity is required for the adoption of internal rules.

The Council shall also act unanimously for the negotiation and conclusion of agreements:
(a) in the field of trade in cultural and audiovisual services, where these agreements risk prejudicing the Union's cultural and linguistic diversity;
(b) in the field of trade in social, education and health services, where these agreements risk seriously disturbing the national organisation of such services and prejudicing the responsibility of Member States to deliver them.

5. The negotiation and conclusion of international agreements in the field of transport shall be subject to Title VI of Part Three and to Article 218.

6. The exercise of the competences conferred by this Article in the field of the common commercial policy shall not affect the
delimitation of competences between the Union and the Member States, and shall not lead to harmonisation of legislative or regulatory provisions of the Member States in so far as the Treaties exclude such harmonisation.

Request for an opinion to the CJEU

- Commission: Article 114 (approximation of laws in the internal market)
  + Article 207 = exclusive competence under 3(2)

- EP supports COM
- CK, FI, FR, LT, HU, RO, UK oppose COM and support shared competence

- Advocate General supports Article 19 (1)
  + 207 = commercial policy, exclusive competence

Article 114
1. Save where otherwise provided in the Treaties, the following provisions shall apply for the achievement of the objectives set out in Article 26. The European Parliament and the Council shall, acting in accordance with the ordinary legislative procedure and after consulting the Economic and Social Committee, adopt the measures for the approximation of the provisions laid down by law, regulation or administrative action in Member States which have as their object the establishment and functioning of the internal market.

2. Paragraph 1 shall not apply to fiscal provisions, to those relating to the free movement of persons nor to those relating to the rights and interests of employed persons.

3. The Commission, in its proposals envisaged in paragraph 1 concerning health, safety, environmental protection and consumer protection, will take as a base a high level of protection, taking account in particular of any new development based on scientific facts. Within their respective powers, the European Parliament and the Council will also seek to achieve this objective.

4. If, after the adoption of a harmonisation measure by the European Parliament and the Council, by the Council or by the Commission, a Member State deems it necessary to maintain national provisions on grounds of major needs referred to in Article 36, or relating to the protection of the environment or the working environment, it shall notify the Commission of these provisions as well as the grounds for maintaining them.

5. Moreover, without prejudice to paragraph 4, if, after the adoption of a harmonisation measure by the European Parliament and the Council, by the Council or by the Commission, a Member State deems it necessary to introduce national provisions based on new scientific evidence relating to the protection of
the environment or the working environment on grounds of a problem specific to that Member State arising after the adoption of the harmonisation measure, it shall notify the Commission of the envisaged provisions as well as the grounds for introducing them.

6. The Commission shall, within six months of the notifications as referred to in paragraphs 4 and 5, approve or reject the national provisions involved after having verified whether or not they are a means of arbitrary discrimination or a disguised restriction on trade between Member States and whether or not they shall constitute an obstacle to the functioning of the internal market.

In the absence of a decision by the Commission within this period the national provisions referred to in paragraphs 4 and 5 shall be deemed to have been approved. When justified by the complexity of the matter and in the absence of danger for human health, the Commission may notify the Member State concerned that the period referred to in this paragraph may be extended for a further period of up to six months.

7. When, pursuant to paragraph 6, a Member State is authorised to maintain or introduce national provisions derogating from a harmonisation measure, the Commission shall immediately examine whether to propose an adaptation to that measure.

8. When a Member State raises a specific problem on public health in a field which has been the subject of prior harmonisation measures, it shall bring it to the attention of the Commission which shall immediately examine whether to propose appropriate measures to the Council.

9. By way of derogation from the procedure laid down in Articles 258 and 259, the Commission and any Member State may bring the matter directly before the Court of Justice of the European Union if it considers that another Member State is making improper use of the powers provided for in this Article.

10. The harmonisation measures referred to above shall, in appropriate cases, include a safeguard clause authorising the Member States to take, for one or more of the non-economic reasons referred to in Article 36,
provisional measures subject to a Union control procedure.

| Article 19 (ex Article 13 TEC) | 1. Without prejudice to the other provisions of the Treaties and within the limits of the powers conferred by them upon the Union, the Council, acting unanimously in accordance with a special legislative procedure and after obtaining the consent of the European Parliament, may take appropriate action to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation. |
| 2016 Commission proposal for a Directive | Article 114 TFEU |
| 2016 Commission proposal for a Regulation | Article 207 TFEU |

ANNEX 4: QUESTIONNAIRE SENT TO EU PERMREPS

QUESTIONNAIRE

Q1. Does your government oppose EU ratification of the Marrakesh Treaty in the Council? If yes, what is the basis for this opposition?

Q2. Would EU ratification of the Marrakesh Treaty create any problems for your Member State? If so, could you please explain the nature of these problems, ie legal, economic, political, institutional, etc?

Q3. How would a CJEU decision/opinion in this area impact the position of your Member State?

Q4. In the light of recent CJEU case-law on the area of competence such as C-114/12 Commission v Council of the EU [2014] and C-28/12 Commission v Council of the EU [2015], would your government be willing to re-examine its position? Why or why not?

Q5. If your government’s opposition rests upon the argument that the proper legal basis for EU ratification is as a so-called mixed agreement, could you refer to the specific CJEU’s case-law that supports this argument?

Q6. Does your government view the Marrakesh Treaty primarily as a Human Rights or Copyright treaty? Why?

Q7. Does your government consider support for EU ratification of the Marrakesh Treaty entirely conditional upon the revision of the EU Copyright framework which the Commission might propose in mid-2016?

Q8. Might your government’s position change in the light of resolution B8-0168/2016 recently adopted by the European Parliament on 28 January 2016 calling on the Council and the Member States to accelerate the ratification process without ratification being conditional upon revision of the EU legal framework or a CJEU’s decision?

Q9. Has your government signed and ratified the UN Convention on the Rights of Persons with Disabilities? If so, do Articles 21 (Freedom of Expression), 24 (Right to Education) and 30(3) (Ensuring Intellectual Property laws do not create an unreasonable or discriminatory barrier to access to cultural materials) have any bearing on your government’s decision whether or not to support EU ratification of the Marrakesh Treaty?

Q10. Are there any other important matters related to EU ratification of the Marrakesh Treaty? Please explain and indicate how such matters ought to be addressed.
Policy Department
Citizens’ Rights and Constitutional Affairs

Role
Policy departments are research units that provide specialised advice to committees, inter-parliamentary delegations and other parliamentary bodies.
