

## THE INTERNAL MARKET: GENERAL PRINCIPLES

The internal market is an area of prosperity and freedom, providing access to goods, services, jobs, business opportunities and cultural richness. Continuous efforts are required to ensure the further deepening of the single market, which could yield significant gains for EU consumers and businesses. In particular, the digital single market opens up new opportunities to boost the economy (through e-commerce), while also cutting red tape (through e-governance and the digitalisation of public services). Recent research indicates that principles of free movement of goods and services and legislation in this area generate benefits estimated at EUR 985 billion annually.

### LEGAL BASIS AND OBJECTIVES

Articles 4(2)(a), 26, 27, 114 and 115 of the Treaty on the Functioning of the European Union (TFEU). The common market created by the Treaty of Rome in 1958 was intended to eliminate trade barriers between Member States with the aim of increasing economic prosperity and contributing to ‘an ever closer union among the peoples of Europe’. The Single European Act of 1986 included the objective of establishing the internal market in the European Economic Community (EEC) Treaty, defining it as ‘an area without internal frontiers in which the free movement of goods, persons, services and capital is ensured’.

### ACHIEVEMENTS

#### A. The common market of 1958

The common market, the Treaty of Rome’s main objective, was achieved through the 1968 customs union, the abolition of quotas, the free movement of citizens and workers, and a degree of tax harmonisation with the general introduction of Value-Added Tax (VAT) in 1970. However, the freedom of trade in goods and services and the freedom of establishment were still limited due to continuing anti-competitive practices imposed by public authorities.

#### B. The launch of the internal market in the 1980s and the Single European Act

The lack of progress in the achievement of the common market was largely attributed to the choice of an overly detailed method of legislative harmonisation and to the rule that required unanimity for decisions taken in the Council. In the mid-1980s, the political debate on this issue led the EEC to consider a more thorough approach to the objective of removing trade barriers: the internal market.

The Single European Act entered into force on 1 July 1987, setting a precise deadline of 31 December 1992 for the completion of the internal market. It also strengthened the decision-making mechanisms for the internal market by introducing qualified majority voting for common customs tariffs, free provision of services, free movement of capital and approximation of national legislation. By the time the deadline passed, over 90% of the legislative acts listed in the 1985 White Paper had been adopted, largely under the qualified majority rule.

### C. Towards a shared responsibility to complete the internal market

The internal market has made a significant contribution to the prosperity and integration of the EU economy. A new internal market strategy running from 2003 to 2010 focused on the need to facilitate the free movement of goods, integrate the services markets, reduce the impact of tax obstacles and simplify the regulatory environment. Substantial progress was made in opening up transport, telecommunications, electricity, gas and postal services.

In its communication entitled 'Better governance for the Single Market' ([COM\(2012\)0259](#)), the Commission proposed horizontal measures such as an emphasis on clear, easily implementable new regulations, better use of existing IT tools to facilitate the exercise of single market rights, and the setting up of national centres to oversee the operation of the single market. Monitoring is an integral part of the annual reports on single market integration in the context of the European Semester process.

### D. The relaunch of the internal market in 2010

In order to boost the European single market once again and put the public, consumers and SMEs at the centre of the single market policy, the Commission published in October 2010 a communication entitled 'Towards a Single Market Act' ([COM\(2010\)0608](#)). A series of measures were presented to boost the EU economy and create jobs, resulting in a more ambitious single market policy.

In October 2012, the Commission presented the Single Market Act II ([COM\(2012\)0573](#)) to further develop the single market and exploit its untapped potential as an engine for growth. The act sets out 12 key actions to be rapidly adopted by the EU institutions. These actions are concentrated on the four main drivers of growth, employment and confidence: (1) integrated networks, (2) cross-border mobility of citizens and businesses, (3) the digital economy, and (4) actions that reinforce cohesion and consumer benefits.

The Single Market Act II follows in the footsteps of an initial set of measures presented by the Commission — the Single Market Act I — and includes the following actions aimed at a more thoroughgoing, better integrated single market:

- Business mobility (e.g. introducing provisions to mobilise long-term investment, modernising insolvency proceedings and helping to create an environment that offers second chances to failing entrepreneurs);
- The digital economy (as a move towards the completion of the digital single market by 2015, the Commission proposed that e-commerce should be promoted in the EU by making payment services easier to use, more trustworthy and more competitive. The need to address the key causes of the lack of investment in high-

speed broadband connections and to make electronic invoicing standard in public procurement procedures was also highlighted);

- Consumer confidence (e.g. introducing measures to ensure widespread access to bank accounts, as well as transparent and comparable account fees and easier bank account switching).

The Commission was due to present all of the key legislative proposals connected with the Single Market Act II by spring 2013 and the non-legislative proposals by the end of 2013. Parliament and the Council were called upon to adopt legislative proposals as a matter of priority. The progress was presented in the study entitled '[Single Market Act: State of Play](#)'<sup>[1]</sup>.

On 28 October 2015, the Commission published a communication entitled 'Upgrading the Single Market: more opportunities for people and business' ([COM\(2015\)0550](#)), which focused on ensuring practical benefits for people in their daily lives and creating additional opportunities for consumers, professionals and businesses. It complemented the Commission's efforts to boost investment, reap the opportunities of the digital single market and improve competitiveness and access to finance. The strategy also aimed to ensure a well-functioning internal market for energy and promote and facilitate labour mobility while preventing abuse of the rules.

Currently, one of the most challenging issues in developing the internal market is the implementation of its digital component. In May 2015, the Commission adopted a Digital Single Market Strategy ([COM\(2015\)0192](#)), which set an intense legislative programme for building a European digital economy, which was completed by the eighth legislature of the European Parliament.

## ROLE OF THE EUROPEAN PARLIAMENT

Parliament was the driving force behind the process that led to the creation of the internal market. Specifically, in its resolution of 20 November 1997, it backed the idea of turning the internal market into a fully integrated home market by 2002. In several resolutions adopted in 2006 (e.g. those of 12 February, 14 February, 16 May and 6 July), Parliament supported the idea that the internal market was a common framework and a point of reference for many EU policies.

Parliament also played an active role in the relaunch of the internal market. In its [resolution of 20 May 2010](#) on delivering a single market to consumers and citizens, Parliament emphasised that measures must be taken in order to inform and empower consumers and SMEs more effectively, and to increase citizens' confidence. Parliament issued further responses to the Single Market Act with three resolutions adopted on 6 April 2011: '[Governance and Partnership in the Single Market](#)', '[A Single Market for Europeans](#)' and '[A Single Market for Enterprises and Growth](#)'.

Parliament's [resolution of 20 April 2012](#) on 'A competitive digital single market – eGovernment as a spearhead' pointed out the need for a clear and coherent legal

framework for the mutual recognition of electronic authentication, identification and signatures (which is necessary to guarantee that cross-border administrative services can operate throughout the EU). This was followed by the [resolution of 22 May 2012](#) on the Internal Market Scoreboard.

On 11 December 2012, Parliament also adopted two non-legislative resolutions relating to the internal market, one on [completing the Digital Single Market](#) and one on [a Digital Freedom Strategy in EU Foreign Policy](#), in which it stressed its strong support for the principle of net neutrality. This means that internet service providers should not block, discriminate against, impair or degrade, including through price, the ability of any person to use a service to access, use, send, post, receive or offer any content, application or service of their choice, irrespective of source or target. In the same resolution, it also called on the Commission and the Council to promote and preserve high standards of digital freedom in the EU. The aim of the resolutions was to develop policy and practice with a view to establishing a real digital single market in the EU to cope with different sets of national rules in key areas, including VAT, postal services and intellectual property rights. The principles of net neutrality and the open internet, as well as the abolition of roaming charges, have been introduced as part of a legislative package laying down measures concerning the European single market for electronic communications and to achieve a Connected Continent ([COM\(2013\)0627](#)).

Parliament adopted the [resolution of 7 February 2013](#) with recommendations to the Commission on the governance of the Single Market, establishing a single market governance cycle as a specific pillar of the European Semester. Furthermore, Parliament adopted the [resolution of 25 February 2014](#) on Single Market governance within the European Semester 2014, followed by its [resolution of 27 February 2014](#) on SOLVIT. Parliament then adopted the [resolution of 12 April 2016](#) entitled 'Towards improved single market regulation', which highlights the need to remove 'unnecessary regulation, bureaucracy and negative impacts, while achieving policy objectives and delivering a competitive regulatory environment that supports employment and enterprise within Europe'. In order to facilitate online access to the information, administrative procedures and assistance services that citizens and businesses need, Parliament advocated the establishment of a single digital gateway ([Regulation \(EU\) 2018/1724](#))<sup>[2]</sup>.

On 9 April 2015, Parliament adopted a [resolution](#) calling on the Commission to boost e-commerce. Parliament then adopted the resolution of 19 January 2016 entitled '[Towards a Digital Single Market Act](#)', followed by numerous measures aimed at building the digital single market, e.g. in areas such as [the collaborative economy](#)<sup>[3]</sup>, [online platforms](#)<sup>[4]</sup>, [artificial intelligence](#)<sup>[5]</sup>, etc.

[3]European Parliament resolution of 15 June 2017 on a European Agenda for the collaborative economy, Texts adopted, [P8\\_TA\(2017\)0271](#).

[4]European Parliament resolution of 15 June 2017 on online platforms and the digital single market, [P8\\_TA\(2017\)0272](#).

[5]European Parliament resolution of 12 February 2019 on a comprehensive European industrial policy on artificial intelligence and robotics, [P8\\_TA-PROV\(2019\)0081](#).

The study entitled '[Reducing costs and barriers for businesses in the Single Market](#)' (published in February 2016) highlighted the significant potential of the digital single market in reducing costs and barriers in the EU for citizens and businesses.

Another study on '[A Longer Lifetime for Products: Benefits for Consumers and Companies](#)' (published in April 2016) demonstrated the potential that the digital single market has to make the EU economy greener. Parliament adopted the [resolution of 4 July 2017](#) on the same topic.

According to another study entitled '[Social economy](#)' published in March 2016, the digital single market could even make the EU economy more social. The development of e-governance and related services such as e-health is one way to achieve that, as described in the study on '[Ubiquitous developments of the Digital Single Market](#)' (published in October 2013).

Recent research indicates that the principles of free movement of goods and services and legislation in this area generate benefits estimated at EUR 985 billion annually<sup>[6]</sup>.
