**Question for written answer P-000307/19**  
**to the Commission**  
**Michał Boni (PPE)**  
(23 January 2019)

*Subject:* Implementation of pilot project 'Bring Broadband Internet Access via Satellite for Educational Multimedia Contents to Unconnected Schools'

Regarding Parliament's approval of the 2019 EU budget, I, with the support of many MEPs from different political groups, submitted a pilot project entitled 'Bringing Broadband Internet Access via Satellite for Educational Multimedia Contents to Unconnected Schools'. The proposal was approved, with the budget line 09 03 77 02.

Innovating in the education sector remains a key priority for the Commission, as is clearly stated in the communication entitled 'Connectivity for a Competitive Digital Single Market — Towards a European Gigabit Society'.

Owing to the importance of this initiative, I would like to ask the Commission about its plans for pilot project implementation this year, as well as to receive confirmation of the amount (EUR 980 000) envisaged in the final budget for the pilot project.

**Answer given by Ms Bieńkowska on behalf of the European Commission**  
(10 April 2019)

The Commission acknowledges the importance of connectivity in the perspective of the European Gigabit Society and reaffirms the synergies of this pilot project with the Space Strategy's <sup>(1)</sup> objective to maximise the benefits of space for society and the EU economy and the complementarities with other EU initiatives such as Rural Broadband action plan <sup>(2)</sup>.

Digital education is gaining ground but without broadband access in schools its vast potential is left unexplored. Schools in digital divide areas, not covered by fixed or mobile broadband, are especially disadvantaged as broadband access is key to get access to high-quality online educational content.

The Commission intends to implement this pilot project by means of a grant following a call for proposals toward stakeholders deeply involved in digital divide reduction such as public authorities, educational institutions or governmental and non-governmental organisations. The action will be implemented by the Research Executive Agency (direct management).

The project will look at both service supply-side and demand-side, the deployment of few field experiments and associated feedbacks.

The Commission confirms that the envelope reserved for the pilot project is EUR 980 000.
