Subject: The Istrian Y motorway

The Istrian Y motorway is in the final stage of construction. Expected soon is the construction of a motorway between Pazin and Matulj, which will complete the motorway colloquially known as the Istrian Y.

However, the key object, the Učka road tunnel, today has only one tube and the construction of a second tube is not planned in the near future, and thus the entire project of the completion of Istrian Y as a motorway is substantially flawed from the point of view of traffic and safety.

I ask the Commission if the European Union could find resources to help in the building of a tunnel through the Učka mountain of about 5.2 km in length in order to ensure a high standard of completion of this extremely important road for the citizens and economy of Istria?
