to the Commission**
Rule 130
Doru-Claudian Frunzuliță (S&D)

Subject: Climate Cooperation with the Government of India

With its vast coastlines and vulnerability to monsoon patterns and glacial melt, India is as susceptible as any to the consequences of failure of collective action on climate, but it can now afford expensive renewable energy production and climate adaptation.

The sheer size of its population means that India's choices about development and climate and energy policy carry global consequences to a degree that is far greater than any other developing country.

What is the Commission's strategy to enhance climate cooperation between the EU and India?
