

**Question for written answer E-005240/2015  
to the Commission**

Rule 130

**Kazimierz Michał Ujazdowski (ECR)**

Subject: Support for coal investments

Contrary to the original premises notified by the Polish government, the Energy Union has adopted the decarbonisation of the economy as one of its pillars.

This has stronger wording than the climate policy to date, based on the objective of "reduction of emissions" and "creation of a low-emission economy".

Deep decarbonisation means significant transformation costs for the Polish economy and problems with the security of energy supplies in my country.

In your plans for stimulating investments in the EU, are you providing for support to investments that will mitigate the consequences of such policy for Poland?

Will it be possible to finance investments into the coal technologies with emission standards lower than the current standards but higher than the standards provided for in the investment policy of the European Investment Bank?
