Subject: Grants from EU funds for the rehabilitation of small illegal landfills

Funds from the previous ISPA and the subsequent IPA programme in the environmental protection component as well as resources from Structural Funds have been earmarked for the past nine years for solving the problem of waste management in Croatia. This is how projects start or are planned for the construction of 13 waste management centres.

Are there any dedicated EU grants for environmental protection available not only for major infrastructure projects but also for the rehabilitation of a large number of small illegal dumps scattered around the country?
