

**Question for written answer E-007907/2015
to the Commission**

Rule 130

José Blanco López (S&D)

Subject: Wind power targets

The Spanish Wind Energy Association (AEE) and the European Wind Energy Association (EWEA) recently revealed that in the EU as a whole nearly 11 800 new wind power megawatts were installed in 2014 —an increase of 5.3 % on the previous year —, with Spain being fifth among the countries making the least progress, achieving only 28 MW. According to the report this situation is the result of the 'negative impact of the political, regulatory and market uncertainty'.

What is the Commission's view of this report and, specifically, of the chances of Spain meeting the 2020 Energy Strategy targets?
