to the Commission**
Rule 130
Ivan Jakovčić (ALDE)

Subject: Ratio of employed and unemployed in the economically active population

Given that one of the Commission's recommendations for Croatia regarding the existing macroeconomic imbalances speaks of the necessity for stronger encouragement of the unemployed and 'activation' of the inactive population, I ask the Commission:

What, according to the Commission's data, are the proportion of the employed and the percentage of unemployment in the economically active population for Croatia and for the other Member States?
