

**Question for written answer E-012832/2015
to the Commission**

Rule 130

Norbert Erdős (PPE)

Subject: Impact of bioethanol imported into the EU from third countries on indirect land use change

In its reply to my Written Question E-7001/2015, the Commission stated that 'the Commission monitors the direct and indirect impacts of the EU biofuels policy on the environment in the EU and in third countries and reports on these impacts to the European Parliament and the Council every two years.'

1. In carrying out this monitoring, does the Commission distinguish between biodiesel and bioethanol?
2. How does the Commission measure indirect land use change (ILUC) caused by ethanol imported into the EU from third countries?
3. In exactly which third countries does the Commission measure ILUC caused by ethanol imported into the EU?
