

**Question for written answer E-012834/2015
to the Commission**

Rule 130

Norbert Erdős (PPE)

Subject: Amount of greenhouse gas saving achieved through consumption of bioethanol produced in the EU

The consumption of bioethanol in road transport results in a considerable reduction in greenhouse gas emissions. The quantity of bioethanol produced in the EU may therefore be regarded as a strong indicator of how much the EU contributes to the creation of climate change trigger events. I therefore have the following questions for the Commission:

1. Precisely how much bioethanol was produced in the EU in each year in the period from 2008 to 2013?
2. Precisely how much did the EU save in terms of greenhouse gas emissions in the period between 2008 and 2013 as a result of bioethanol consumption in road transport?
