

**Question for written answer E-015296/2015
to the Commission**

Rule 130

William (The Earl of) Dartmouth (EFDD)

Subject: Consequences of tiering

Has the Commission considered the distortion of competition that could occur under a tiered approach in which sectors receiving varying levels of carbon leakage mitigation are in direct competition – for example, the construction products sector where the ceramics, glass, cement and steel sectors all compete with each other?
