to the Commission**
Rule 130
Anneleen Van Bossuyt (ECR)

Subject: Impact of the energy efficiency directive at national level

The Commission proposal for a new energy efficiency directive sets a target of 30% greater energy efficiency by 2030. In the Commission's assessment, the advantages are calculated in terms of GNP and employment at European level.

1. Has the Commission also conducted a corresponding impact assessment at national level? And does it, therefore, have specific figures for Belgium?
2. How will the Commission take into account the efforts that Member States have already made to improve energy efficiency when it comes to assessing national climate and energy plans?
