

**Question for written answer E-003653/2017
to the Commission**
Rule 130
Edward Czesak (ECR)

Subject: European gigabit society and 5G

Given the significant impact of 5G networks and services on the potential of the European gigabit society and on economic growth, I should like to put the following questions:

Is the Commission considering the possibility of providing support for investments, for instance, by calling for ensuring, maintaining and developing long-term financing for the 5G Action Plan and the network modernisation at the appropriate level within the horizon of the next Multiannual Financial Framework 2020-2027?

Is the Commission considering taking account of the PEM limits set by ICNIRP in order to prevent incoherence and fragmentation, as well as to ensure coherent conditions for the introduction of mobile networks throughout the EU?
