

**Question for written answer E-005627/2017  
to the Commission**

Rule 130

**András Gyürk (PPE)**

Subject: Electric car fleet - forecast

There is likely to be a significant increase in the number of purely electric or hybrid cars on Europe's roads, although there are major discrepancies between the predictions for the extent of the change. What values is the Commission using to estimate the number of electric hybrid (plug-in hybrid, or PHEV) vehicles and completely electric vehicles (battery electric vehicles, or BEV) for the years 2020 to 2030?
