DRAFT REPORT

Committee on the Environment, Public Health and Food Safety

Rapporteur: Jutta Paulus
Symbols for procedures

* Consultation procedure
*** Consent procedure
***I Ordinary legislative procedure (first reading)
***II Ordinary legislative procedure (second reading)
***III Ordinary legislative procedure (third reading)

(The type of procedure depends on the legal basis proposed by the draft act.)

Amendments to a draft act

Amendments by Parliament set out in two columns

Deletions are indicated in bold italics in the left-hand column. Replacements are indicated in bold italics in both columns. New text is indicated in bold italics in the right-hand column.

The first and second lines of the header of each amendment identify the relevant part of the draft act under consideration. If an amendment pertains to an existing act that the draft act is seeking to amend, the amendment heading includes a third line identifying the existing act and a fourth line identifying the provision in that act that Parliament wishes to amend.

Amendments by Parliament in the form of a consolidated text

New text is highlighted in bold italics. Deletions are indicated using either the symbol or strikeout. Replacements are indicated by highlighting the new text in bold italics and by deleting or striking out the text that has been replaced.

By way of exception, purely technical changes made by the drafting departments in preparing the final text are not highlighted.

DRAFT EUROPEAN PARLIAMENT LEGISLATIVE RESOLUTION

(Ordinary legislative procedure: first reading)

The European Parliament,

– having regard to the Commission proposal to Parliament and the Council (COM(2019)0038),

– having regard to Article 294(2) and Article 192(1) of the Treaty on the Functioning of the European Union, pursuant to which the Commission submitted the proposal to Parliament (C9-0143/2019),

– having regard to Article 294(3) of the Treaty on the Functioning of the European Union,

– having regard to the opinion of the European Economic and Social Committee of 15 May 20191,

– after consulting the Committee of the Regions,

– having regard to Rule 59 of its Rules of Procedure,

– having regard to the report of the Committee on the Environment, Public Health and Food Safety (A9-0000/2020),

1. Adopts its position at first reading hereinafter set out;

2. Calls on the Commission to refer the matter to Parliament again if it replaces, substantially amends or intends to substantially amend its proposal;

3. Instructs its President to forward its position to the Council, the Commission and the national parliaments.

Amendment 1

Proposal for a regulation
Recital -1 (new)

Text proposed by the Commission Amendment

(-1) The existential threat posed by climate change requires enhanced

1 OJ C 240, 16.7.2019, p. 41
ambition and increased climate action by the Union and at global level. The Union is committed to stepping up efforts to tackle climate change and to delivering on the implementation of the Paris Agreement\(^{1a}\) in line with the latest available science. The Intergovernmental Panel on Climate Change special report of 2018 entitled: ‘Global warming of 1.5°C’ confirmed that significant emissions reductions in all sectors are crucial to limit global warming to under 1.5°C.

\(^{1a}\) Paris Agreement (OJ L 282, 19.10.2016, p.4)

---

**Amendment 2**

**Proposal for a regulation**

**Recital 1**

*Text proposed by the Commission*

(1) Maritime transport has *an* impact on the global climate, as a result of carbon dioxide (CO\(_2\)) emissions from shipping. In 2015, it emitted 13% of the total Union greenhouse gas emissions from transport\(^{15}\). International maritime shipping remains the only means of transportation not included in the Union's commitment to reduce greenhouse gas emissions.

*Amendment*

(1) Maritime transport has a *direct* impact on climate change and on air quality, as a result of carbon dioxide (CO\(_2\)) emissions from shipping and other emissions that it generates, such as nitrogen oxides, sulphur oxides, methane, particulate matter and black carbon. In 2015, it emitted 13% of the Union’s total greenhouse gas emissions from transport\(^{15}\). *Maritime emissions are expected to increase by 86% above 1990 levels by 2050 unless further action is taken, despite the adoption of minimum ship efficiency standards by the International Maritime Organisation (IMO).*

International maritime shipping remains the only means of transportation not included in the Union's commitment to reduce greenhouse gas emissions. *Without further action to integrate maritime*
emissions into the Union's economy-wide and domestic greenhouse gas emissions targets, the projected increase in maritime emissions seriously risks endangering efforts taken by other sectors to reach the objective of becoming climate-neutral as soon as possible and by 2050 at the latest.

Amendment 3
Proposal for a regulation
Recital 2

Text proposed by the Commission

Amendment

(2) All sectors of the economy should contribute to the joint effort to complete the transition to net-zero greenhouse gas (GHG) emissions as soon as possible and by 2050 at the latest in line with the Union's commitments under the Paris Agreement and the European Council conclusions on climate change of 12 December 2019.

Amendment 4
Proposal for a regulation
Recital 3

Text proposed by the Commission

(3) The European Parliament's Resolution of February 2014 on a 2030 framework for climate and energy policies called on the Commission and the Member States to set a binding Union 2030 target of reducing greenhouse gas emissions by at least 40% compared to 1990 levels. The European Parliament also noted that all sectors of the economy would need to contribute to the reduction of greenhouse gas emissions if the Union is to deliver its fair share of global efforts.

Amendment

(3) The resolutions of the European Parliament of 14 March 2019 on climate change and of 28 November 2019 on the climate and environmental emergency stressed the need for immediate and ambitious action with a view to reaching climate neutrality as soon as possible and by 2050 at the latest, and called on the Commission and the Member States to increase the binding Union 2030 target of reducing greenhouse gas emissions by 55% compared to 1990 levels. The European Parliament also noted that all sectors of the economy, including international aviation and maritime transport, would need to contribute to the reduction of greenhouse gas emissions if the Union is to deliver its fair share of global efforts.

Amendment 5
Proposal for a regulation
Recital 3 a (new)

Text proposed by the Commission

(3 a) The resolution of the European Parliament of 28 November 2019 on the 2019 UN Climate Change Conference (COP25) also stressed the need for
additional Union actions to address GHG emissions from the maritime sector in light of slow and insufficient progress at the IMO. The European Parliament supported, in particular, the inclusion of the maritime sector in the Union system for greenhouse gas emission allowance trading (the ‘EU ETS’), as well as the introduction of ship efficiency standards at Union level.

Amendment 6
Proposal for a regulation
Recital 4

Text proposed by the Commission
Amendment

(4) In its Conclusions of 24 October 2014, the European Council endorsed a binding Union target of an at least 40% domestic reduction in greenhouse gas emissions by 2030 compared to 1990. The European Council also stated the importance of reducing greenhouse gas emissions and risks related to fossil fuel dependency in the transport sector and invited the Commission to examine further instruments and measures for a comprehensive and technology-neutral approach, including for the promotion of emissions reduction, renewable energy sources, and energy efficiency in transport.

Amendment 7
Proposal for a regulation
Recital 5 a (new)
Text proposed by the Commission

(5a) The communication of the Commission of 11 December 2019 on the European Green Deal, which sets out a roadmap of key policies and measures for the Union to become the first climate-neutral continent by 2050 at the latest. The communication confirmed further action at Union level will be needed to address GHG emissions from the maritime sector, including its inclusion in the EU ETS.

Or. en

Amendment 8
Proposal for a regulation
Recital 6

Text proposed by the Commission

(6) In April 2015, the European Parliament and the Council adopted Regulation (EU) 2015/757 on the monitoring, reporting and verification of carbon dioxide emissions from maritime transport (the “EU MRV Regulation”), which was complemented in 2016 with two Delegated Regulations and two Implementing Regulations. The aim of the EU MRV Regulation is to collect data on shipping emissions for further policymaking and to incentivise emission reductions by providing information on ships’ efficiency to relevant markets. The EU MRV Regulation obliges companies to monitor, report and verify the fuel consumption, CO₂ emissions and energy efficiency of their ships on voyages to and from European Economic Area (EEA) ports on an annual basis, starting from 2018. It also applies to CO₂ emissions within EEA ports. The first emissions reports are due by 30 April 2019.

Amendment

(6) In April 2015, the European Parliament and the Council adopted Regulation (EU) 2015/757 on the monitoring, reporting and verification of carbon dioxide emissions from maritime transport (the “EU MRV Regulation”), which was complemented in 2016 with two Delegated Regulations and two Implementing Regulations. The aim of the EU MRV Regulation is to collect data on shipping emissions for further policymaking and to incentivise emission reductions by providing information on ships’ efficiency to relevant markets. The EU MRV Regulation was adopted as a first step in a staged approach for the inclusion of maritime transport emissions as part of the Union's GHG reduction commitments and for the pricing subsequently of those emissions in line with the 'polluter pays' principle. When the EU MRV Regulation was adopted, the Commission committed to considering, in
the context of future legislative proposals on maritime emissions, which next steps would be appropriate to ensure that the sector would make a fair contribution to the Union’s emission reduction objectives, in particular the possibility of extending the EU ETS to the maritime sector. The EU MRV Regulation obliges companies to monitor, report and verify the fuel consumption, CO₂ emissions and energy efficiency of their ships on voyages to and from European Economic Area (EEA) ports on an annual basis, starting from 2018. It also applies to CO₂ emissions within EEA ports. The first emissions reports were published on 30 June 2019.

---

Amendment 9
Proposal for a regulation
Recital 7

Text proposed by the Commission

(7) Article 22 of the EU MRV Regulation states that the Commission will, in the event of an international agreement on a global monitoring, reporting and verification system, review the EU MRV Regulation and, if appropriate, propose amendments in order to ensure alignment with that international agreement.

Amendment

(7) Article 22 of the EU MRV Regulation states that the Commission will, in the event of an international agreement on a global monitoring, reporting and verification system or on global measures to reduce GHG emissions from maritime transport, review the EU MRV Regulation and, if appropriate, propose amendments in order to ensure consistency with that international agreement.

Amendment 10
Proposal for a regulation
Recital 8

Text proposed by the Commission

(8) Under the Paris Agreement that was adopted in December 2015 at the 21st

Amendment

(8) Under the Paris Agreement that was adopted in December 2015 at the 21st
Conference of the Parties of the United Nations Framework Convention on Climate Change (UNFCCC)\textsuperscript{23}, the Union and its Member States have undertaken an economy-wide reduction target. Efforts to limit international maritime emissions through the International Maritime Organisation (IMO) are under way and should be encouraged. The IMO adopted\textsuperscript{24} in October 2016 a data collection system for fuel oil consumption of ships ("the global IMO DCS").

\begin{footnotesize}
\begin{itemize}
  \item The IMO also adopted on 13 April 2018 an initial strategy on the reduction of GHG emissions from ships, seeking to cap the increase of those emissions as soon as possible and to reduce them by at least 50% by 2050 compared to 2008, and to pursue efforts towards phasing them out entirely. At the same time, the Member States and Associated Members of the IMO committed to reducing CO\textsubscript{2} emissions per transport work, as an average across international shipping, by at least 40% by 2030, pursuing efforts towards a 70% reduction by 2050.
\end{itemize}
\end{footnotesize}

\textsuperscript{24} IMO Resolution MEPC.278(70) amending MARPOL Annex VI.

---

Amendment 11

Proposal for a regulation

Recital 10

\textit{Text proposed by the Commission}

(10) The impact assessment indicated that a partial alignment of the two monitoring, reporting and verification systems could contribute to reducing the administrative burden for shipping

\textit{Amendment}

(10) The impact assessment indicated that a partial alignment of the two monitoring, reporting and verification systems could contribute to reducing the administrative burden for shipping
companies, while preserving the key objectives of the EU MRV Regulation. Such a partial alignment should however not modify the governance, scope, verification, transparency or CO₂ reporting requirements of the EU MRV Regulation as it would severely undermine its objectives and affect its capacity to inform future policy-making decisions and to incentivise the uptake of energy efficiency measures and behaviours in shipping. Any amendments to the EU MRV Regulation should therefore limit the alignment with the global IMO DCS in relation to definitions, monitoring parameters, monitoring plans and templates.

(12) Global IMO DCS provisions on data to be monitored and reported annually should be taken into account so as to ensure that streamlined data is collected for ships' activities falling under both systems. In order to do so, the parameter "deadweight tonnage" should be reported but "cargo carried" should remain on a voluntary basis. "Time at sea" should be replaced by the global IMO DCS definition of “hours underway". Finally, calculation of “distance travelled” should be based on global IMO DCS²⁵ to reduce administrative burden.

²⁵ IMO Resolution MEPC 282 (70).

Or. en
Amendment 13
Proposal for a regulation
Recital 13 a (new)

Text proposed by the Commission

(13 a) Removing market barriers in the maritime sector, including the use of a transparent and robust MRV system, would contribute to the uptake of energy efficiency technologies, and thereby reduce maritime emissions by about 2% by 2030. For the maritime sector to contribute fully to the transformation of the entire transport sector into a sector with zero emissions, further action is therefore necessary. The scope of the MRV Regulation should, therefore, be extended to include binding requirements for companies to reduce their GHG emissions per transport work.

Amendment

Or. en

Amendment 14
Proposal for a regulation
Recital 13 b (new)

Text proposed by the Commission

(13 b) Given the results of the impact assessment accompanying the Commission proposal for the MRV Regulation, which showed that all options other than an EU ETS for maritime emissions would fall short of delivering emissions reductions in a manner that would be consistent with the white paper of the Commission of 28 March 2011 entitled: ‘Roadmap to a single European Transport Area’, Directive 2003/87/EC of the European Parliament and of the Council should be extended to cover
maritime emissions.

Amendment 15
Proposal for a regulation
Recital 13 c (new)

Text proposed by the Commission

(13 c) The successful transition to zero-emission shipping requires an integrated approach and the right enabling environment to stimulate innovation, both on ships and in ports. That enabling environment involves public and private investment in research and innovation, technological and operational measures to improve the energy efficiency of ships, and the deployment of sustainable alternative fuels and propulsion technologies, including the necessary refuelling and recharging infrastructure in ports. A Maritime Transport Decarbonisation Fund should be established from revenues generated from the auctioning of maritime allowances under the EU ETS to improve the energy efficiency of ships and support investment in innovative technologies and infrastructure to decarbonise maritime transport, including in short sea shipping and ports, and the deployment of sustainable alternative fuels and zero-emission propulsion technologies. The Commission should also develop measures to regulate the access of the
most polluting ships to Union ports and to oblige docked fossil-fuel ships to use shore-side electricity. The Commission should also require ports to adopt demurrage tariffs based on emissions.

Amendment 16
Proposal for a regulation
Recital 14 a (new)

Text proposed by the Commission

(14 a) In order to ensure that a high quality of data can be maintained and that data is published in the THETIS-MRV register, the European Maritime Safety Agency should be given the necessary powers and resources to be able to check emissions reported by verifiers.

Or. en

Amendment 17
Proposal for a regulation
Recital 15

Text proposed by the Commission

(15) The objective of Regulation (EU) 2015/757 is to monitor, report and verify CO₂ emissions from ships calling at EEA ports as the first step of a staged approach to reduce greenhouse gas emissions. This cannot be sufficiently achieved by the Member States but can rather, by reason of its scale and effects, be better achieved at Union level. The global IMO DCS should be taken into account and this Regulation ensures the continued comparability and reliability of collected data based on a single set of requirements. The Union may

Or. en
adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality as set out in that Article, this Regulation does not go beyond what is necessary in order to achieve that objective.

continued comparability and reliability of collected data based on a single set of requirements. The Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality as set out in that Article, this Regulation does not go beyond what is necessary in order to achieve that objective.

Regulation (EU) 2015/757 is amended as follows:

Amendment

Amendment 20
Proposal for a regulation
Article 1 – paragraph -1 a (new)

Regulation (EU) 2015/757

Article 1
Present text

Article 1

Subject matter

This Regulation lays down rules for the accurate monitoring, reporting and verification of carbon dioxide (CO2) emissions and of other relevant information from ships arriving at, within or departing from ports under the jurisdiction of a Member State, in order to promote the reduction of CO2 emissions from maritime transport in a cost effective manner.

Amendment

(-1a) Article 1 is replaced by the following:

"Article 1

Subject matter

This Regulation lays down rules for the accurate monitoring, reporting and verification of greenhouse gas (GHG) emissions and of other relevant information from ships arriving at, within or departing from ports under the jurisdiction of a Member State.

In order to contribute to achieving the Union's commitment to reducing its domestic and economy-wide GHG emissions under the Paris Agreement, and to implement the IMO Initial Strategy at Union level, this Regulation also imposes obligations on companies to reduce their CO2 emissions per transport work by at least 40% by 2030 compared to the average performance per category of ships of the same size and type in the first reporting period as referred to in Article 8."

Amendment 34
Proposal for a regulation
Article 1 a (new)
Directive 2003/87/EC
Chapter II a (new)

Text proposed by the Commission

Amendment

Article 1 a

Amendments to Directive 2003/87/EC

Directive 2003/87/EC is amended as follows:

(1) the following chapter is inserted:

CHAPTER IIa

MARITIME TRANSPORT

Article 3ga

Scope

The provisions of this Chapter shall apply from 1 January 2021 to the allocation and issue of allowances in respect of carbon dioxide (CO₂) emissions from ships covered by Regulation (EU) 2015/757 of the European Parliament and of the Council*.

Article 3gb

Total quantity and method of allocation of allowances for maritime transport

1. By 1 December 2020, the Commission shall adopt delegated acts in accordance with Article 23 to supplement this Directive by setting the total quantity of allowances for maritime transport in line with other sectors and the method of allocation of allowances for maritime
transport through auctioning, as well as laying down the special provisions with regard to the administering Member State.

2. Articles 12 and 16 shall apply to allowances for maritime transport in the same manner as to allowances related to other activities.

3. At least 30% of the revenues generated from the auctioning of allowances referred to in paragraph 1 of this Article shall be used through the fund established under Article 3gc to improve the energy efficiency of ships and support investment in innovative technologies and infrastructure to decarbonise maritime transport, including in short sea shipping and ports, and the deployment of sustainable alternative fuels and zero-emission propulsion technologies.

Article 3gc

Maritime Transport Decarbonisation Fund

1. A Maritime Transport Decarbonisation Fund (‘the Fund’) shall be established for the period from 2021 to 2030 to improve the energy efficiency of ships and support investment in innovative technologies and infrastructure to decarbonise maritime transport, including in short sea shipping and ports, and the deployment of sustainable alternative fuels and zero-emission propulsion technologies.

2. By way of derogation from Article 12 of this Directive, maritime transport companies may pay an annual membership contribution to the Fund in accordance with their total emissions reported for the preceding calendar year under Regulation (EU) 2015/757. The Fund shall surrender allowances collectively on behalf of maritime transport companies that are members of the Fund. The contribution per tonne of emissions shall be set by the Fund by 28
February each year, but shall be at least equal to the market price for allowances in the preceding year.

3. The Fund shall acquire allowances equal to the collective total quantity of contributions referred to in paragraph 2 of this Article during the preceding calendar year and surrender them to the registry established under Article 19 of this Directive by 30 April each year for subsequent cancellation. Information on contributions shall be made available to the public.

4. The Fund shall invest in improving the energy efficiency of ships and support innovative technologies and infrastructure to decarbonise maritime transport, including in short sea shipping and ports, and the deployment of sustainable alternative fuels and zero-emission propulsion technologies, through the revenues referred to in paragraph 3 of Article 3gb. All investment supported by the Fund shall be made public and be consistent with the aims of this Directive.

5. The Commission is empowered to adopt delegated acts in accordance with Article 23 to supplement this Directive concerning the implementation of this Article.

Or. en

EXPLANATORY STATEMENT

Background
Since the first recognition of the greenhouse effect of carbon dioxide in 1856 by Eunice Foote and even more after quantification of the effect 1896 by Svante Arrhenius, it has been known that Earth’s surface temperature is dependent on carbon dioxide concentration in the atmosphere.

Following numerous scientific reports and testimonies, the Kyoto Protocol recognized in 1997 that global warming was caused by humans and demanded the reduction of greenhouse gas emissions. Unfortunately, measures taken so far to combat climate change were not effective, as annual emissions have almost doubled since 1997. The last decade was the warmest ever recorded and the year 2019 was even the hottest year in Europe\(^1\). The same holds for the oceans that were never as warm as in 2019\(^2\). This shows why ambitious EU climate legislation is needed.

According to the latest IPCC report, there is a 66 % chance of staying below 1.5 C if future carbon emissions are limited to 420 Gt CO\(_2\)eq – or 10 years of current emissions. Accordingly, the budget for a 50 % chance of staying below 1.5 C is 580 Gt CO\(_2\)eq – 14 years of current emissions. The maritime transport sector alone emits globally around 940 Mt CO\(_2\)eq annually, and is responsible for about 2.5 % of global GHG emissions. At Union level (i.e. for ships calling at EEA ports), CO\(_2\) emissions from maritime transport increased by 48 % between 1990 and 2008, and are expected to reach up to 86 % above 1990 levels by 2050. The shipping sector is completely off track to contribute to the collective effort to reach net-zero emissions by 2050 at the latest. It is therefore not understandable why shipping remains the only mode of transport that is not expressly addressed by any EU emission reduction policy.

International Maritime Organisation (IMO)
At the moment, ship operators have a reporting obligation to the EU (MRV)\(^3\) and to the IMO (DCS)\(^4\). The rapporteur agrees that it is important that the EU and IMO reporting obligations are aligned. This, however, does not mean that EU standards should be lowered. On the contrary, better standards at global level are necessary. To give an example: In contrast to the EU MRV, the IMO is not collecting data on the cargo carried but on deadweight tonnage only. This measurement makes it very difficult, if not impossible to calculate the carbon footprint of the shipped goods. The IMO has promised for more than 20 years that it will tackle shipping emissions and has only introduced its Data Collection System after the EU has implemented the MRV Regulation. No real progress has been seen, which is why EU action is a necessity to achieve the Paris objective to limit the temperature increase to 1.5C above pre-industrial levels\(^5\).

\(^1\) European Commission, Climate bulletin, Copernicus [https://climate.copernicus.eu/climate-bulletins](https://climate.copernicus.eu/climate-bulletins)
\(^2\) Advances in Atmospheric Sciences
\(^4\) The International Maritime Organization (IMO) adopted a mandatory Fuel Oil Data Collection System (DCS) for international shipping, requiring ships of 5,000 gross tonnage or above to start collecting and reporting data to an IMO database from 2019.
\(^5\) UN Gneeral Assembly, Paris Agreement, 4 November 2016, Article 2(1) (a).
The European Union
Since 1 January 2018, large ships (over 5000 gross tonnage) arriving to or departing from ports in the European Economic Area already have to monitor and report their CO₂ emissions, fuel consumption and other parameters, such as distance travelled, time at sea, etc., according to Regulation (EU) 2015/757 on the monitoring, reporting and verification of carbon dioxide emissions from maritime transport (thereafter the ‘MRV Regulation’). The first available data⁶ show that the 10,800 ships covered by the MRV Regulation emitted more than 130 million tonnes of CO₂ in 2018, which is more than the annual CO₂ emissions of Belgium!

The Commission has now published a proposal to review the MRV Regulation. This proposal however, is still only focusing on monitoring and reporting of data wherefore the rapporteur regards it as her responsibility to have a more ambitious draft report. We cannot afford to lose ever more time in combating climate change, we need to act now. The urgency for action was also reinforced by the European Parliament when it declared a climate emergency end of 2019. The Parliament explicitly asked the Commission to ensure that all relevant legislative proposals are fully aligned with the objective of limiting global warming under 1.5 °C.

The rapporteur’s priorities
The EU data collection system MRV is good. A main advantage over the IMO DCS is giving responsibility to the ship operator instead of the flag state: as soon as a ship is calling at an EEA port, it has to report its emissions. Now, however, is the momentum to actually use the collected data. Reliable information about emissions is important. However, information alone will not reduce greenhouse gas emissions. The European Commission in its impact assessment has also confirmed this. The main objective of this draft report is therefore to reduce the administrative effort for companies and administrations as far as possible, and, even more importantly, to reduce shipping emissions within the EEA.

ETS
The European Parliament must take responsibility and transpose what Commission President Ursula von der Leyen has already proposed: the inclusion of maritime transport in the ETS system of the European Union. This would then also be in line with the Commission’s Political Guidelines for the next five years. The rapporteur warmly welcomes the Commission’s commitment in the Green Deal to broaden the scope of the EU Emissions trading scheme (ETS) to shipping.

Several attempts to regulate the shipping sector were already made over the past years, none of which was successful. The momentum to include shipping in the ETS is now. There will be no distortion of competition, as all flag states and all companies are treated in the same way. The scope of the regulation includes all intra-Union voyages, all incoming voyages from the last non-Union port to the first Union port of call and all outgoing voyages from an Union port to the next non-Union port of call⁷.

Maritime Transport Decarbonisation Fund
The rapporteur would like to see the establishment of a maritime transport decarbonisation fund to foster research and development in the energy efficiency of ships and support investments in innovative technologies and infrastructure to decarbonise maritime transport, including short sea shipping and ports, and the deployment of sustainable fuels. The fund shall be established

⁷ See Recital 14 of existing MRV Regulation
for the period from 2021 to 2030 and shall be financed from revenues of the ETS. Therefore, the rapporteur regards the establishment of the maritime fund elementary in order to make a real impact in not only emission reduction but also aiming for achieving zero emission technology.

**Energy Efficiency**
The rapporteur takes note of the target set by the IMO to reduce CO$_2$ emissions per transport work by at least 40% by 2030. The EU needs to lead by example by transposing this very much needed target into EU law, thereby ensuring that all ships calling at Union ports will deliver on their fair share to the fulfilment of the IMO Initial Strategy, while leaving sufficient flexibility for companies to decide on the operational or technological measures they wish to implement.

**Zero Emission Ports**
The rapporteur sees a huge potential in shore-side electricity and zero emission ports. If ships at berth were required to switch-off their engines and connect to the land electricity grid or use other energy sources with equivalent effect, this measure would provide immediate health benefits to the citizens living in port areas. Therefore, the rapporteur calls on Commission to develop measures for this goal, i.e. setting targets for member states for deployment of shore side electricity.

**Cargo carried and data transparency**
The rapporteur welcomes that the Commission has included transparency elements in the MRV proposal. The rapporteur, however, believes that the reporting of the parameter ‘cargo carried’ should remain compulsory in contrast to the Commission proposal. This is important to actually be able to check the efficiency of a journey and to calculate the carbon footprint of the transported goods. This measure will guarantee fairness and a level playing field for all stakeholders.

**Extension of the scope to all GHG**
The rapporteur would like to see an extension of the scope to all greenhouse gases, not only CO$_2$. Especially methane emissions have an enormous impact on climate change as greenhouse gas potential of methane is 87 compared to CO$_2$ on a 20-year timeframe and therefore stricter regulation is needed.
