Outbreak of *Xylella fastidiosa* affecting olive trees

Joint motion for a resolution

Recital I a (new)

Joint motion for a resolution

Amendment

*Ia. whereas in a recent scientific opinion on the risk assessment of *Xylella fastidiosa*, the European Food Safety Authority (EFSA) showed that ‘the intensive use of insecticide treatment to limit the disease transmission and control the insect vector may have direct and indirect consequences for the environment by modifying whole food webs with cascading consequences, and hence affecting various trophic levels. For example, the indirect impact of pesticides on pollination is currently a matter of serious concern (EFSA, 2013). In addition, large-scale insecticide treatments also represent risks for human and animal health’;*
