Low oil prices and the fight against ISIL/Da’esh

Changes in global oil market

The price of oil has fallen significantly since June 2014, from a peak of US$115 per barrel (bl) then to US$26 per barrel in January 2016, although it has somewhat recovered recently. This can partly be explained by weaker demand, robust supply growth and the expanding coverage of mandatory energy efficiency provisions worldwide. These changes come at a time of major turmoil in parts of the Middle East. Iraq – with the world’s fifth largest oil reserves – is engaged in the fight against ISIL/Da’esh which controls some of Iraq’s oil fields. Syria – with a national budget largely dependent on oil revenues – is torn apart by civil war. Iran, on the other hand, is returning to international oil markets as a result of the gradual removal of sanctions against it, in line with the agreement on its nuclear programme.

Trends in energy demand

While the supply of oil to the international market has been increasing over recent years, demand has been slowly decreasing. The World Energy Outlook 2015 forecasts the market rebalancing at US$80 per barrel in 2020, with a further increase in price thereafter, but does not rule out a more prolonged period of lower oil prices.

Oiling national budgets

Low oil prices have adversely affected the budgets of oil-producing countries, causing losses in revenues. The situation of conflict-torn countries like Libya, Syria, Iraq and Yemen, whose budgets are heavily dependent on oil, is particularly difficult. Many of the Gulf countries, however, will be able to withstand low prices, thanks to high financial reserves built up over years, in the hope of eliminating some competitors.

Cutting ISIL/Da’esh’s cash flows

The convergence of lower oil prices, increased efforts of the law enforcement community, and the military response to curb ISIL/Da’esh finances have contributed to reducing the group’s revenue, and consequently weakened the ‘caliphate’s’ capacity to fund its 25 000-strong army.

Oil and security

Bahrain, Kuwait, Iran, Saudi Arabia, UAE, and Qatar are financially, diplomatically and militarily engaged in the conflicts in Syria, Iraq and/or Yemen. While regional stability proves elusive and the share of defence spending in national budgets is projected to decrease towards 2020, Saudi Arabia, Qatar and the UAE will remain among the biggest defence spenders globally.

Involvement* in the conflict in:

- Syria
- Iraq
- Yemen
