The European Green Deal

The European Green Deal is a key policy plank of the new European Commission led by President Ursula von der Leyen. It is a package of measures that aims to radically cut emissions of greenhouse gases while creating jobs in clean industries. Its main objectives are for the EU to become climate neutral by 2050, radically reduce other types of pollution, help European companies to become world leaders in green products, and offer aid to regions affected by this economic transition.

This note offers links to recent commentaries, studies and reports from international think tanks on the Green Deal and climate issues. More studies on the topics can be found in a previous item from these series, published in early December 2019.
