Coronavirus: The latest

The world is currently facing the fastest-spreading pandemic since the Spanish flu (in the aftermath of the First World War), prompting governments to take unprecedented decisions to contain this highly contagious coronavirus, which leads to COVID-19 infection. The measures taken include closing borders in some countries, encouraging telework as much as possible, and shutting schools, universities, restaurants and many other facilities, except for shops selling groceries, supermarkets and pharmacies. People are urged to stay at home and avoid physical contact with others. In a growing number of countries, confinement is being enforced.

This note offers links to recent commentaries and reports from international think tanks on the coronavirus and related issues. Earlier publications on the topic can be found in the previous item in the series, published on 11 March.
