

# European Health Data Space

One of the **priorities** of the European Commission 2019-2024.

In a common European Health Data Space we can **exchange health data** such as:

electronic health records

genomics data

data from patient registries

For better **EU-wide**:

- healthcare delivery
- health research
- health policy-making

Built on **3 pillars**:

- strong system of data governance & rules for data exchange
- data quality
- strong infrastructure and interoperability

It should fully protect citizens' data and reinforce the portability of their health data.

A new **Joint Action for the European Health Data Space** will support Member States with its implementation.
