Annex II – Part B – point 2

*Text proposed by the Commission*

**Sampling frequencies**

All parameters set in accordance with Article 5 shall be monitored at least at the frequencies set out in the following Table, unless a different sampling frequency is determined on the basis of a supply risk assessment carried out in accordance with Article 9 and part C of this Annex:

<table>

<tr>
<th>Volume (m3) of water distributed or produced each day within a supply zone</th>
<th>Minimum frequency of sampling and analysis for compliance monitoring</th>

*a: all samples are to be taken during times when the risk of treatment breakthrough of enteric pathogens is high.*

*b: at least 10 samples are to be taken during times when the risk of treatment breakthrough of enteric pathogens is high.*

Note 1: A supply zone is a geographically defined area within which water intended for human consumption comes from one or more sources and water quality may be considered as being approximately uniform

Note 2: The volumes are calculated as averages taken over a calendar year. The number of inhabitants in a supply zone may be used instead of the volume of water to determine the minimum frequency, assuming water consumption of 200 l/(day*capita).

Note 3: Member States that have decided to exempt individual supplies under Article 3(2)(b)
of this Directive shall apply these frequencies only for supply zones that distribute between 10 and 100 m$^3$ per day

Note 1: A supply zone is a geographically defined area within which water intended for human consumption comes from one or more sources and water quality may be considered as...
being approximately uniform.

Note 2: The volumes are calculated as averages taken over a calendar year. The number of inhabitants in a supply zone may be used instead of the volume of water to determine the minimum frequency, assuming water consumption of 200 l/(day*capita).

*Note 3: The frequency indicated is calculated as follows: e.g. 4 300 m³/day = 16 samples (four for the first 1 000 m³/day + 12 for additional 3 300 m³/day).*

Note 4: Member States that have decided to exempt individual supplies under Article 3(2)(b) of this Directive shall apply these frequencies only for supply zones that distribute between 10 and 100 m³ per day.
