Paragraph 82 b (new)

Motion for a resolution

82b. Points out that the number of side effects reported to the EMA – over 2.8 million (4,000 per day) including nearly 12,000 fatalities – should have led to greater vigilance and full transparency in the agency’s assessment of each severe or fatal case; suggests that an alert threshold should be defined and published to suspend and revoke any marketing authorisation;

Paragraph 115 a (new)

115a. Notes that COVID-19 vaccines have not prevented the circulation of the virus or contamination by the virus and that the new variants of the virus have proven to be less dangerous; notes that no control of the disease was associated with vaccination; notes that the Director of the US Centers for Disease Control and Prevention stated on 13 June 2023 that the vaccination status of hospitalised persons was not known; considers that the models of estimates of the impact of COVID-19 vaccines on mortality and the hypothesis used should be more robust and reliable as the estimated results are too variable from country to country;

Or. en
Motion for a resolution
Paragraph 116 a (new)

116a. Notes that COVID-19 was initially perceived as an alarming and highly virulent sickness, but as the crisis gradually unfolded, it became clear that there was a predominant impact on the elderly and individuals with underlying health conditions; highlights that statistical evidence substantiates this observation, as a significant proportion of severe cases and fatalities have been reported within these vulnerable demographics;
