2014 UN Climate Change Conference – COP 20 in Lima, Peru (1-12 December 2014)

Motion for a resolution**Paragraph 61***Motion for a resolution*

61. Notes that the prices of different energy sources play a major role in determining the behaviour of market actors, including industry and consumers, and notes that the inability of the current international policy framework to fully internalise external costs perpetuates unsustainable consumption patterns; ***further reiterates that a global carbon market with a sufficiently high trading price would be a sound basis for achieving both*** substantial emission abatements and ***a level playing field for industry***; calls on the EU and its partners to find, in the immediate future, ***the most effective way of promoting links between the EU ETS and other trading schemes aiming for a global carbon market, ensuring greater diversity of abatement options, improved market size and liquidity, transparency and, ultimately, more efficient allocation of resources for the energy sector and industry***;

Amendment

61. Notes that the prices of different energy sources play a major role in determining the behaviour of market actors, including industry and consumers, and notes that the inability of the current international policy framework to fully internalise external costs perpetuates unsustainable consumption patterns; ***acknowledges the failure of market instruments such as the carbon market to achieve*** substantial emission abatements, ***as the carbon market has revealed itself to be ineffective and counter-productive***; calls on the EU and its partners to find, in the immediate future, ***an international, global and legally binding normative approach to replace the current market approach***;

Motion for a resolution

Paragraph 60 a (new)

Motion for a resolution

Amendment

60a. Draws attention to the effects of the deregulation and liberalisation of international trade which have led to increased levels of energy consumption and flows of goods on a global scale, thus increasing the concentration of greenhouse gases in the atmosphere; considers that both defending and promoting local energy production and consumption through shorter supply chains is a means of advocating for international trade complementarities instead of competition between products, producers and countries;
