

WRITTEN QUESTION E-0167/00

by Rosa Díez González (PSE), Fernando Pérez Royo (PSE) and Luis Berenguer Fuster (PSE)
to the Commission

Subject: Competition transition costs (CTC) and market variables for the Spanish electricity sector

Bearing in mind the funding system introduced by the sixth transitional provision of Law 54/97 on the Spanish electricity sector enabling electricity companies to receive aid to cover competition transition costs, has the Commission urged the Spanish government to amend this provision and link the granting of CTC to market variables (demand, price, interest rates, etc.), as the Commission advocated in its analysis methodology for state aid linked to CTC?
