

WRITTEN QUESTION E-3549/07
by Peter Skinner (PSE)
to the Commission

Subject: Genetically modified organisms (GMOs)

Does the Commission think that the co-existence of genetically modified crops with conventional/organic crops can effectively be guaranteed, without risk of amalgamation, especially during the harvest period?

How does the Commission assess the present authorisation procedure for genetically modified organisms (GMOs), in particular with a view to the number of tests conducted before the release of such GMOs?
