

Question for written answer E-006154/2018
to the Commission
Rule 130
Jacques Colombier (ENF)

Subject: Management of species

With regard to the management of species as decided at European level by the Commission in view of the Birds and Habitats Directives and Natura 2000 network:

1. Depending on the different biological factors associated with the extinction risk, what is the estimate that may predefine that a species is considered vulnerable at national and European level?
2. Does the Commission have an estimate of the number of individuals which determines that a species of bird is considered in good conservation status at national and European level?
