

**Question for written answer E-000986/2019
to the Commission**
Rule 130
Louis Michel (ALDE)

Subject: Technology and education

Robotics and artificial intelligence are changing the jobs of today and tomorrow.

65% of children who started primary school in 2018 will have a job that does not yet exist. To reap the benefits of technological advances, however, we must invest in our children's education. Without digital education, the European Union may lose out in the third technological revolution.

What will the Commission do to ensure that a quality digital education is provided in each Member State and to encourage lifelong digital education?
