

**Question for written answer E-000322/2020
to the Commission**

Rule 138

Margarida Marques (S&D)

Subject: Contribution of cohesion policy to tackling climate change

Climate and environmental issues have always been an integral part of EU policies and are increasingly considered important. Cohesion policy has financed investment in areas such as renewable energies, energy efficiency, environmental protection and biodiversity.

Under the last two multiannual financial frameworks (2007-2013 and 2014-2020), how much has cohesion policy (the European Regional Development Fund and the Cohesion Fund) contributed to these objectives (tackling climate change and protecting biodiversity and the environment)?
