

**Question for written answer E-002244/2021  
to the Commission**

Rule 138

**Dan-Ștefan Motreanu (PPE)**

Subject: Gender-disaggregated data on housing affordability and energy poverty

Women are at higher risk of energy poverty due to their longer life expectancy and lower pensions. This risk is shared by female-led households with lower incomes. Women will be also at a higher risk of poverty and eviction if EU renovation wave strategy costs, including energy efficiency measures, are passed on to tenants. The Commission's staff working documents concerning the EU renovation wave strategy and energy poverty do not include data and indicators incorporating the gender dimension.

Does the Commission plan to publish gender-disaggregated data on housing affordability and energy poverty so that its related policies are better supported?
