

Question for written answer E-003767/2021
to the Commission
Rule 138
Roman Haider (ID)

Subject: State of play regarding the construction of the Brenner Base Tunnel

The Brenner Base Tunnel is considered an important project for the TEN-T core network and aims to reduce the volume of traffic transiting the area concerned to protect local residents and nature, and to make the route safer for road users. Unfortunately, the construction of the road project is delayed.

1. What progress exactly can the European Commission see as at the date of submission of this question and is this on schedule or are there any specific delays?
2. As at the above-mentioned date, how much had the EU invested and where exactly did the funds go – does the Commission keep an itemised list?
3. What is the situation regarding cooperation with the Member States concerned – Germany, Austria and Italy – and where do the problems lie?
