Subject: EU Emissions Trading System for road transport

Assuming that the EU Emissions Trading System (ETS) for road transport, as proposed in the 'Fit for 55' package, is fully implemented:

1. What will be the additional cost per km for a passenger travelling in a car and the additional cost per km for goods transported on the road in 2030?
2. What will be the total cost of investment needed for the implementation of the ETS for road transport in 2030?
3. What will be the ratio of new jobs to lost jobs in 2030?
