

**Question for written answer E-004512/2021
to the Commission**
Rule 138
Virginie Joron (ID)

Subject: COVID 'vaccine' and children's health

On 29 September 2021, Slovenia suspended use of the Janssen vaccine¹ following the death of a 20-year-old woman. The previous day, Pfizer had announced that they were seeking approval for their vaccine to be administered to children aged 5 to 11².

In Europe, each government has a different vaccination policy. The French Government has embarked on a 'vaccination' programme for children aged 12 to 17. In Sweden, Germany and Switzerland, for the same age group, either vaccination has been delayed or take-up is low³.

According to the European Medicines Agency, COVID 'vaccines' have caused more than 6 000 deaths⁴⁵ in the EU. Doctors have reported adverse reactions in more than 400 babies under the age of 2 years old (including 147 under the age of 1 month old⁶)! In France, 208 children were reported to have suffered serious medical side effects (paralysis in 10 cases) after they received the Pfizer vaccine⁷.

1. How many babies and children have died or suffered serious medical side effects in Europe after receiving 'COVID vaccinations'?
2. How many cases of paralysis or deaths of healthy children does the Commission consider to be enough for a product to lose its conditional authorisation?
3. Why has the Commission authorised vaccinations for healthy infants under the age of one month old⁸?
