

**Question for written answer E-004638/2021
to the Commission**

Rule 138

Dan-Ștefan Motreanu (PPE)

Subject: Geothermal energy

Geothermal energy is cheap, reliable and renewable, providing heating, electricity production and cooling, but the EU has never fully realised its potential. Geothermal could be an important part of the solution to Europe's energy crisis and climate neutrality objective.

What measures is the Commission planning in order to boost the development of geothermal energy across the Member States?
