

Question for written answer E-002944/2022
to the Commission
Rule 138
Virginie Joron (ID)

Subject: Excess mortality following COVID 'vaccines': the opinion of insurers and the European Insurance and Occupational Pensions Authority (EIOPA)

In the United States, attorney Todd Callender and Scott Davison, CEO of the insurer OneAmerica, have reported an increased mortality of people who have been vaccinated against COVID-19. They claim this is visible in their internal insurance data¹.

In Europe, nearly one billion doses have been administered and 341 million people have received at least one dose of a COVID-19 'vaccine'. Around one in two Europeans (53%) have received three doses².

It is therefore essential to clarify whether a warning sign is statistically identifiable.

The EIOPA is the competent authority at the European level in the field of insurance and pensions.

It has published a number of supervisory statements on risk for insurers in the context of COVID-19³.

1. Have the EIOPA and its insurance or pension partners identified excess mortality as a result of COVID-19 vaccines?
2. Will the Commission be asking the EIOPA to carry out a study on this subject involving the main insurers, with the assistance of the competent national authorities, for example?
