

**Question for written answer E-003380/2022
to the Commission**

Rule 138

Joachim Kuhs (ID), **Marcel de Graaff** (ID)

Subject: 84 % increase in heart-related deaths among males aged 18-39 following COVID-19 vaccination

According to the Florida Department of Health, 'The State Surgeon General now recommends against the COVID-19 mRNA vaccines for males ages 18-39 years old'. This is due to an 84 % increase in heart-related deaths in males aged 18-39¹.

1. Is the Commission familiar with this shocking new data?
2. Will this data, in combination with the major excess in deaths among vaccinated people, change the Commission's perspective on and approach to COVID-19 vaccinations?
3. Will the Commission require that a warning for possible side-effects be distributed alongside COVID-19 vaccine invitations sent within the Member States?
