

**Question for written answer E-001074/2023/rev.1  
to the Commission**

Rule 138

**Joachim Kuhs (ID), Marcel de Graaff (NI)**

**Subject:** 'Disappearance' of 1.7 million cases of reported vaccine side effects and 22 000 reported deaths close to vaccination from the EMA data analysis database

1.7 million cases of reported vaccine side effects and 22 000 reported deaths close to vaccination have 'disappeared' from the European Medicines Agency (EMA) data analysis database<sup>1</sup>.

1. 1.7 million cases of reported vaccine side effects and 22 000 reported deaths close to COVID-19 vaccination – 115 880 side effects from Biontech Pfizer; 338 241 side effects from AstraZeneca; 12 200 alleged victims of the Pfizer vaccine; 6 557 alleged victims of the Moderna vaccine; 2 781 alleged victims of the AstraZeneca vaccine – seem to have been deleted from the EMA data analysis programming. Why have these statistics been deleted?
2. If the figures given in the above question are incorrect or incomplete, can the Commission provide the correct numbers of side effects and deaths – specified for each pharmaceutical company – that have been deleted, recalculated or registered or accounted for in a different manner?
3. Can the Commission disclose details of any and all contacts between any of the EU institutions or any EU officials and any persons, representatives or entities involved with the EMA and/or with any of the pharmaceutical companies mentioned in question 1, regarding the statistics concerning side effects or deaths as referred to in that question.
