Subject: How many deaths have been caused by 'COVID vaccines'?

The European Medicines Agency (EMA) reported that 11 448 people have died in the EU following COVID-19 vaccines[1],

8 368 following Pfizer BioNTech vaccinations (which is 1 345 more deaths in 2022).

1 579 following AstraZeneca vaccinations.

1 161 following Moderna vaccinations.

339 following Janssen vaccinations.

1 following Nuvaxovid vaccinations.

0 following (inactivated, adjuvanted) Valneva vaccinations.

As of 10 April 2023, a total of 50 648 deaths caused by 'COVID vaccines' had been reported in EudraVigilance – broken down by disease (heart conditions, central nervous system disorders, etc.). Why then, in the EMA's latest report of 8 December 2022, is it stated that only 11 448 deaths were flagged and recorded in the EudraVigilance database?

Submitted: 13.4.2023
