

**Question for written answer E-001217/2023
to the Commission**

Rule 138

Gianantonio Da Re (ID)

Subject: Support for development of and research on vaccines targeting cancer and cardiovascular diseases

Press reports show that work is under way to develop vaccines that use mRNA technology to target cancer, cardiovascular diseases and autoimmune diseases.

It would seem that these new medicines could be on the market as soon as 2030.

Given the potential importance of such a medical discovery for the health of European citizens, I would ask the Commission the following questions:

1. How does it intend to support the medical research in this field?
2. Will it allocate specific funding to the research institutes to encourage production of these vaccines in Europe?
