to the Commission**

Rule 138

**Gianantonio Da Re (ID)**

Subject: Clarification concerning the establishment of an artificial intelligence oversight body at EU level

The Spanish Council of Ministers recently approved a decree establishing a national agency for the supervision of artificial intelligence (AI). That body will monitor AI technologies with a view to their correct use.

Given the recent expansion of the AI market – use of AI increased by 32% in 2022 in Italy alone – and the potential of AI technologies, how will the Commission help Member States to regulate artificial intelligence with the aim of exploiting its potential?
