

**Question for written answer E-002812/2023/rev.1
to the Commission**

Rule 138

Theodoros Zagorakis (PPE)

Subject: Climate change and education

Following last summer's unimaginable natural disasters both in Europe and throughout the world, the important part that promoting environmental sustainability operations can play is once again centre stage, as is promoting lessons on the impact of climate change at all levels of the education system. Instilling a viable, environment-friendly attitude in school students is very important, since investing in education means investing in the future.

In view of this:

1. Does the Commission plan to provide support to Member States so that they include environmental education in school curricula and in education policies on addressing climate change?
2. Does it intend to finance educational programmes that incorporate the practical and immediate involvement of pupils in environmental protection organisations and eco-programmes?
