

**Question for written answer E-003135/2023
to the Commission**
Rule 138
Ivan Vilibor Sinčić (NI)

Subject: Artificial intelligence accountability

We are all aware that artificial intelligence has, in a very short space of time, become part of the daily life of EU citizens.

But we may not even be aware of the advantages and disadvantages artificial intelligence can bring us or whether it could cause more harm than good.

1. What measures does the Commission plan to take to help people who have lost their jobs as a direct result of the introduction of artificial intelligence into business processes?
2. Does the Commission plan to regulate artificial intelligence in the future with binding laws and regulations?
3. Who will be held responsible in the event of harmful failures or errors of artificial intelligence?
