

**Question for written answer E-000944/2024/rev.1
to the Commission**

Rule 138

Markus Buchheit (ID)

Subject: Estimate of price rises resulting from carbon border adjustment measures

1. Does the Commission plan to perform a cost assessment to estimate the price rise in cement, fertiliser, steel and other energy-intensive imports following the introduction of its carbon border adjustment measures?
2. Does it also plan to calculate the cost burden on agriculture and the building industry, as well as the effect the measures will have on the inflation rate in the EU as a whole?
3. How does it plan to respond to EU global partners' inevitable retaliatory measures (punitive tariffs) and to compensate EU exporters for the sales losses they will incur as a result of Commission action?
