Single Market For Digital Services (Digital Services Act) and amending Directive 2000/31/EC

Proposal for a regulation
Amendment 377
Sandro Gozi, Stéphanie Yon-Courtin, Valérie Hayer, Fabienne Keller, Christophe Grudler, Marco Zullo, Stéphane Séjourné, Laurence Farreng

Proposal for a regulation
Recital 40

Text proposed by the Commission

(40) Providers of hosting services play a particularly important role in tackling illegal content online, as they store information provided by and at the request of the recipients of the service and typically give other recipients access thereto, sometimes on a large scale. It is important that all providers of hosting services, regardless of their size, put in place user-friendly notice and action mechanisms that facilitate the notification of specific items of information that the notifying party considers to be illegal content to the provider of hosting services concerned ('notice'), pursuant to which that provider can decide whether or not it agrees with that assessment and wishes to remove or disable access to that content ('action'). Provided the requirements on notices are met, it should be possible for individuals or entities to notify multiple specific items of allegedly illegal content through a single notice. The obligation to put in place notice and action mechanisms should apply, for instance, to file storage and sharing services, web hosting services, advertising servers and paste bins, in as far as they qualify as providers of hosting services covered by this Regulation.

Amendment

(40) Providers of hosting services play a particularly important role in tackling illegal content online, as they store information provided by and at the request of the recipients of the service and typically give other recipients access thereto, sometimes on a large scale. It is important that all providers of hosting services, regardless of their size, put in place user-friendly notice and action mechanisms that facilitate the notification of specific items of information that the notifying party considers to be illegal content to the provider of hosting services concerned ('notice'), pursuant to which that provider can decide whether or not it agrees with that assessment and wishes to remove or disable access to that content ('action'). Provided the requirements on notices are met, it should be possible for individuals or entities to notify multiple specific items of allegedly illegal content through a single notice. The obligation to put in place notice and action mechanisms should apply, for instance, to file storage and sharing services, web hosting services, advertising servers and paste bins, in as far as they qualify as providers of hosting services covered by this Regulation.

Furthermore, the notice and action mechanism should be complemented by 'stay down' provisions whereby providers of hosting services should demonstrate their best efforts in order to prevent from reappearing content which is identical to another piece of content that has already been identified and removed by them as illegal. The application of this requirement should not lead to any
general monitoring obligation.

Amendment

(40) Providers of hosting services play a particularly important role in tackling illegal content online, as they store information provided by and at the request of the recipients of the service and typically give other recipients access thereto, sometimes on a large scale. It is important that all providers of hosting services, regardless of their size, put in place user-friendly notice and action mechanisms that facilitate the notification of specific items of information that the notifying party considers to be illegal content to the provider of hosting services concerned ('notice'), pursuant to which that provider can decide whether or not it agrees with that assessment and wishes to remove or disable access to that content ('action'). Nonetheless, the provider should have the possibility to reject a given notice if there is another entity with more granular control over the alleged content or the provider has no technical capability to act on a specific content. Therefore, the blocking orders should be considered as a last resort measure and applied only when all other options are exhausted. Provided the requirements on notices are met, it should be possible for individuals or entities to notify multiple specific items of allegedly illegal content through a single notice. The obligation to put in place notice and action mechanisms should apply, for instance, to file storage and sharing services, web hosting services, advertising
servers and paste bins, in as far as they qualify as providers of hosting services covered by this Regulation.

Proposal for a regulation
Recital 40 a (new)

Text proposed by the Commission

(40a) Nevertheless, notices should be directed to the actor that has the technical and operational ability to act and the closest relationship to the recipient of the service that provided the information or content, such as to an online platform and not to the hosting service provider on which provides services to that online platform. Such hosting service providers should redirect such notices to the particular online platform and inform the notifying party of this fact.

Amendment 384
Dita Charanzová, Andrus Ansip, Vlad-Marius Botoş, Claudia Gamon, Morten Løkkegaard, Svenja Hahn, Karen Melchior, Liesje Schreinemacher

Proposal for a regulation
Recital 40 b (new)

Text proposed by the Commission

(40b) Moreover, hosting providers should seek to act only against the items of information notified. This may include acts such as disabling hyperlinking to the items of information. Where the removal or disabling of access to individual items of information is technically or operationally unachievable due to legal,
contractual, or technological reasons, such as encrypted file and data storage and sharing services, hosting providers should inform the recipient of the service of the notification and seek action. If a recipient fails to act or delays action, or the provider has reason to believe has failed to act or otherwise acts in bad faith, the hosting provider may suspend their service in line with their terms and conditions.

Proposal for a regulation
Recital 41

Text proposed by the Commission

(41) The rules on such notice and action mechanisms should be harmonised at Union level, so as to provide for the timely, diligent and objective processing of notices on the basis of rules that are uniform, transparent and clear and that provide for robust safeguards to protect the right and legitimate interests of all affected parties, in particular their fundamental rights guaranteed by the Charter, irrespective of the Member State in which those parties are established or reside and of the field of law at issue. The fundamental rights include, as the case may be, the right to freedom of expression and information, the right to respect for private and family life, the right to protection of personal data, the right to non-discrimination and the right to an effective remedy of the recipients of the service; the freedom to conduct a business, including the freedom of contract, of service providers; as well as the right to human dignity, the rights of the child, the
right to protection of property, including intellectual property, and the right to non-discrimination of parties affected by illegal content.

Providers of hosting services should act upon notices without undue delay, taking into account the type of illegal content that is being notified and the urgency of taking action. The provider of hosting services should inform the individual or entity notifying the specific content of its decision without undue delay after taking a decision whether to act upon the notice or not.

Proposal for a regulation
Recital 42 a (new)

Text proposed by the Commission

Amendment

(42a) A hosting service provider may in some instances become aware, for instance through a notice by a notifying party or through its own voluntary measures, of information relating to certain activity of a recipient of the service, such as the provision of certain types of illegal content, that reasonably justify, having regard to all relevant circumstances of which the hosting service provider is aware, the suspicion that the recipient may have committed, may be committing or is likely to commit a serious criminal offence involving a threat to the life or safety of person, such as offences specified in Directive 2011/93/EU of the European Parliament and of the Council. In such instances, the hosting service provider should inform without delay the competent law enforcement authorities of such suspicion, providing all relevant information available to it, including where relevant the content in question and an explanation of its suspicion. This Regulation does not provide the legal basis for profiling of recipients of the
services with a view to the possible identification of criminal offences by hosting service providers. Hosting service providers should also respect other applicable rules of Union or national law for the protection of the rights and freedoms of individuals when informing law enforcement authorities.

Amendment 397
Marcel Kolaja
Proposal for a regulation
Recital 42 a (new)

Text proposed by the Commission

(42a) When moderating content, mechanisms voluntarily employed by platforms should not lead to ex-ante control measures based on automated tools or upload-filtering of content. Automated tools are currently unable to differentiate illegal content from content that is legal in a given context and therefore routinely result in over-blocking legal content. Human review of automated reports by service providers or their contractors does not fully solve this problem, especially if it is outsourced to private staff that lack sufficient independence, qualification and accountability. Ex-ante control should be understood as making publishing subject to an automated decision. Filtering automated content submissions such as spam should be permitted. Where automated tools are otherwise used for content moderation the provider should ensure human review and the protection of legal content.

To similarly avoid unnecessary regulatory burdens, certain obligations should not apply to hosting service providers often referred to as closed online platforms where, within the framework of an organised distribution network operating under a common brand, the provider of the intermediary service has a direct organisational, associative, cooperative or capital ownership link with the recipient of the service or where the intermediary service solely aims to intermediate content between the members of the organised distribution framework and their suppliers.

\textit{Amendment}

(46) Action against illegal content can be taken more quickly and reliably where online platforms take the necessary measures to ensure that notices submitted by trusted flaggers through the notice and action mechanisms required by this Regulation are treated \textit{without delay and in accordance with the rules of the profession but} without prejudice to the requirement to process and decide upon all notices submitted under those mechanisms in a timely, diligent and objective manner. Such trusted flagger status should only be
that have demonstrated, among other things, that they have particular expertise and competence in tackling illegal content, that they represent collective interests and that they work in a diligent and objective manner. Such entities can be public in nature, such as, for terrorist content, internet referral units of national law enforcement authorities or of the European Union Agency for Law Enforcement Cooperation (‘Europol’) or they can be non-governmental organisations and semi-public bodies, such as the organisations part of the INHOPE network of hotlines for reporting child sexual abuse material and organisations committed to notifying illegal racist and xenophobic expressions online. For intellectual property rights, organisations of industry and of right-holders could be awarded trusted flagger status, where they have demonstrated that they meet the applicable conditions. The rules of this Regulation on trusted flaggers should not be understood to prevent online platforms from giving similar treatment to notices submitted by entities or individuals that have not been awarded trusted flagger status under this Regulation, from otherwise cooperating with other entities, in accordance with the applicable law, including this Regulation and Regulation (EU) 2016/794 of the European Parliament and of the Council.43

awarded to entities, and not individuals, that have demonstrated, among other things, that they have particular expertise and competence in tackling illegal content, that they represent collective interests and that they work in a diligent and objective manner. Such entities can be public in nature, such as, for terrorist content, internet referral units of national law enforcement authorities or of the European Union Agency for Law Enforcement Cooperation (‘Europol’) or they can be non-governmental organisations and semi-public bodies, such as the organisations part of the INHOPE network of hotlines for reporting child sexual abuse material and organisations committed to notifying illegal racist and xenophobic expressions online. For intellectual property rights, organisations of industry and of right-holders could be awarded trusted flagger status, where they have demonstrated that they meet the applicable conditions. The rules of this Regulation on trusted flaggers should not be understood to prevent online platforms from giving similar treatment to notices submitted by entities or individuals that have not been awarded trusted flagger status under this Regulation, from otherwise cooperating with other entities, in accordance with the applicable law, including this Regulation and Regulation (EU) 2016/794 of the European Parliament and of the Council.43

(46) Action against illegal content can be taken more quickly and reliably where online platforms take the necessary measures to ensure that notices submitted by trusted flaggers through the notice and action mechanisms required by this Regulation are treated with priority, without prejudice to the requirement to process and decide upon all notices submitted under those mechanisms in a timely, diligent and objective manner. Such trusted flagger status should only be awarded to entities, and not individuals, that have demonstrated, among other things, that they have particular expertise and competence in tackling illegal content, that they represent collective interests and that they work in a diligent and objective manner. Such entities can be public in nature, such as, for terrorist content, internet referral units of national law enforcement authorities or of the European Union Agency for Law Enforcement Cooperation (‘Europol’) or they can be non-governmental organisations and semi-public bodies, such as the organisations part of the INHOPE network of hotlines for reporting child sexual abuse material and organisations committed to notifying illegal racist and xenophobic expressions online. For intellectual property rights, organisations of industry and of right-holders could be awarded trusted flagger status, where they have demonstrated that they meet the applicable conditions. The rules of this Regulation on trusted flaggers should not be understood to prevent online platforms from giving similar treatment to notices submitted by entities or individuals that have not been awarded trusted flagger status, depending on the severity of the illegal activity, without prejudice to the requirement to process and decide upon all notices submitted under those mechanisms in a timely, diligent and objective manner. Such entities can be public in nature, such as, for terrorist content, internet referral units of national law enforcement authorities or of the European Union Agency for Law Enforcement Cooperation (‘Europol’) or they can be non-governmental organisations and private or semi-public bodies, such as the organisations part of the INHOPE network of hotlines for reporting child sexual abuse material and organisations committed to notifying illegal racist and xenophobic content online. For intellectual property rights, organisations of industry and of individual right-holders could be awarded trusted flagger status, where they have demonstrated that they meet the applicable conditions. The rules of this Regulation on trusted flaggers should not be understood to prevent online platforms from giving similar treatment to notices submitted by
status under this Regulation, from otherwise cooperating with other entities, in accordance with the applicable law, including this Regulation and Regulation (EU) 2016/794 of the European Parliament and of the Council.

In such instances, the online platform should inform without delay the competent law enforcement authorities of such suspicion, providing all relevant information available to it, including where relevant the content in question and an explanation of its suspicion. This Regulation does not provide the legal basis for profiling of recipients of the services with a view to the possible identification of criminal offences by online platforms. Online platforms should also respect other applicable rules of Union or national law for the protection of the rights and freedoms of individuals when informing law enforcement authorities.

Amendment

(Does not affect the English version.)

Proposal for a regulation
Recital 48

Text proposed by the Commission

(48) An online platform may in some instances become aware, such as through a notice by a notifying party or through its own voluntary measures, of information relating to certain activity of a recipient of the service, such as the provision of certain types of illegal content, that reasonably justify, having regard to all relevant circumstances of which the online platform is aware, the suspicion that the recipient may have committed, may be committing or is likely to commit a serious criminal offence involving a threat to the life or safety of person, such as offences specified in Directive 2011/93/EU of the European Parliament and of the Council. In such instances, the online platform should inform the competent law enforcement authorities of such suspicion, providing all relevant information available to it, including where relevant the content in question and an explanation of its suspicion. This Regulation does not provide the legal basis for profiling of recipients of the services with a view to the possible identification of criminal offences by online platforms. Online platforms should also respect other applicable rules of Union or national law for the protection of the rights and freedoms of individuals when informing law enforcement authorities.

Amendment

(48) An online platform may in some instances become aware, such as through a notice by a notifying party or through its own voluntary measures, of information relating to certain activity of a recipient of the service, such as the provision of certain types of illegal content, that reasonably justify, having regard to all relevant circumstances of which the online platform is aware, the suspicion that the recipient may have committed, may be committing or is likely to commit a serious criminal offence involving a threat to the life or safety of person, such as offences specified in Directive 2011/93/EU of the European Parliament and of the Council. In such instances, the online platform should promptly inform the competent law enforcement authorities of such suspicion, providing all relevant information available to it, including where relevant the content in question and an explanation of its suspicion. This Regulation does not provide the legal basis for profiling of recipients of the services with a view to the possible identification of criminal offences by online platforms. Online platforms should also respect other applicable rules of Union or national law for the protection of the rights and freedoms of individuals when informing law enforcement authorities.

Amendment 439
Alexandra Geese, Rasmus Andresen, Kim Van Sparrentak
on behalf of the Greens/EFA Group

Proposal for a regulation
Recital 49 a (new)

Text proposed by the Commission

(49a) In order to contribute to a transparent online environment for consumers that supports the green transition, online platforms that allow consumers to conclude distant contracts with traders should provide consumers in real time with clear and unambiguous information on the environmental impact of its products and services, such as the use of sustainable and efficient delivery methods, sustainable and ecological packaging, as well as the environmental costs of returning goods in the event of withdrawal.

Amendment 440
Marco Zullo

Proposal for a regulation
Recital 49 a (new)
It is necessary to combat forms of misleading communication, to ensure a safe and transparent online environment capable of instilling trust in the user. In this regard, the recipient of the service must be able to access the timeline and check for any change to the content with which the user interacts, in particular posts, comments, descriptions or prices of a product.

Or. en

Being able to know how a content has changed over time can help to: (a) limit the spread of fake news that use the technique of attracting consensus on a real-content and then change it to fake-content when the rating has grown; (b) limit misleading communications about products sold on online platforms by increasing the price compared to the real one only to bring up a higher discount percentage for the sale at a given time.

Amendment 441

Proposal for a regulation
Recital 50 a (new)

Text proposed by the Commission

(50a) After having obtained the necessary contact information of a trader,
which are aimed at ensuring consumer rights, a provider of intermediary services needs to verify that these details are consistently being updated and accessible for consumers. Therefore, it shall conduct regular and randomized checks on the information provided by the traders on its platform. To ensure a consistent display of these contact information, intermediary services should establish mandatory designs for the inclusion of these contact information. A content, good or service shall only be displayed after all necessary information are made available by the business user.

Justification

The author supports the rapporteurs Amendments 27, 89 & 90, which have included new provisions on the traceability of business customers. However, the author would like to add this recital in line with the changes added in Art. 13a.

Recital 51
In view of the particular responsibilities and obligations of online platforms, they should be made subject to transparency reporting obligations, which apply in addition to the transparency reporting obligations applicable to all providers of intermediary services under this Regulation. For the purposes of determining whether online platforms may be very large online platforms that are subject to certain additional obligations under this Regulation, the transparency reporting obligations for online platforms should include certain obligations relating to the publication and communication of information on the average monthly active recipients of the service in the Union.

Online advertisement plays an important role in the online environment, including in relation to the provision of the services of online platforms. However, online advertisement can contribute to significant risks, ranging from advertisement that is itself illegal content, to contributing to financial incentives for the publication or amplification of illegal or otherwise harmful content and activities online, or the discriminatory display of advertising with an impact on the equal treatment and opportunities of citizens. In addition to the requirements resulting from Article 6 of Directive

Text proposed by the Commission

(52) Online advertisement plays an important role in the online environment, including in relation to the provision of the services of online platforms. However, online advertisement can contribute to significant risks, ranging from advertisement that is itself illegal content, to contributing to financial incentives for the publication or amplification of illegal or otherwise harmful content and activities online, or the discriminatory display of advertising with an impact on the equal treatment and opportunities of citizens. In addition to the requirements resulting from Article 6 of Directive 2000/31/EC, online platforms should therefore be required to ensure that the recipients of the service have certain individualised information necessary for them to understand when and on whose behalf the advertisement is displayed. In addition, recipients of the service should have information on the main parameters used for determining that specific advertising is to be displayed to them, providing meaningful explanations.

Amendment

(52) Online advertisement plays an important role in the online environment, including in relation to the provision of the services of online platforms. Online advertising is a significant source of financing for many digital business models and an effective tool to reach new customers, not least for small- and medium sized companies. However, there are some instances when online advertisement can contribute to significant risks, ranging from advertisement that is itself illegal content, to contributing to financial incentives for the publication or amplification of illegal content and activities online, or the discriminatory display of advertising with an impact on the equal treatment and opportunities of citizens. To ensure consumer protection online advertisement should be subject to proportionate and meaningful transparency obligations. In addition to the requirements resulting from Article 6 of Directive 2000/31/EC, online platforms should therefore be required to ensure that
of the logic used to that end, including when this is based on profiling. The requirements of this Regulation on the provision of information relating to advertisement is without prejudice to the application of the relevant provisions of Regulation (EU) 2016/679, in particular those regarding the right to object, automated individual decision-making, including profiling and specifically the need to obtain consent of the data subject prior to the processing of personal data for targeted advertising. Amendment 460
Alexandra Geese, Rasmus Andresen, Kim Van Sparrentak
on behalf of the Greens/EFA Group

Proposal for a regulation
Recital 52 a (new)

Text proposed by the Commission

(52a) A core part of an online platform’s business is the manner in which information is prioritised and presented on its online interface to facilitate and optimise access to information for the recipients of the service. This is done, for example, by algorithmically suggesting, ranking and prioritising information, distinguishing through text or other visual representations, or otherwise curating information provided by recipients. Such recommender systems can have a significant impact on the ability of recipients to retrieve and interact with information online. They also play an important role in the amplification of certain messages, the viral dissemination of information and the stimulation of online behaviour. Consequently, online platforms should ensure that recipients can understand how recommender system impact the way information is displayed, and can influence how information is presented to them. They should clearly
present the parameters for such recommender systems in an easily comprehensible manner to ensure that the recipients understand how information is prioritised for them. They should also ensure that the recipients enjoy alternative options for the main parameters. Options not based on profiling of the recipient should be available and used by default.

Justification

This recital is in line with the new Article 24a new on recommender systems for online platforms.

Amendment 461
Evelyne Gebhardt, Andreas Schieder, Sylvie Guillaume, Maria Grapini, Biljana Borzan, Maria-Manuel Leitão-Marques, Paul Tang, Tiemo Wölken, Monika Beňová

Proposal for a regulation
Recital 52 a (new)

Text proposed by the Commission

(52a) The market position of very large online platforms allows them to collect and combine enormous amounts of personal data, thereby strengthening their market position vis-a-vis smaller competitors, while at the same time incentivising other online platforms to take part in comparable data collection practices and thus creating an unfavourable environment for consumers. Therefore, the collecting and further processing of personal data for the purpose of displaying tailored advertisement should be prohibited. The selection of advertisements shown to a consumer should consequently be based on contextual information, such as language settings by the device of the user or the digital location. Besides a positive effect on privacy and data protection
rights of users, the ban will increase competition on the market and will facilitate market access for smaller online platforms and privacy-friendly business models.

Amendment 462
Ramona Strugariu, Vlad-Marius Botoș

Proposal for a regulation
Recital 52 a (new)

Text proposed by the Commission

(52a) Very large online platforms using recommendation systems should be bound by the obligation to promote the reliability of information (due prominence obligation), by implementing mechanisms that refer to a self-regulatory standard, highlighting information sources that respect standardized professional and ethical self-regulatory standards, such platforms should in turn give them preferential treatment by prioritizing their content; a must-carry obligation should ensure that recommender systems display information from trustworthy sources, such as public authorities, scientific sources or public interest journalism as first results following search queries in areas of public interests;

Amendment 463
Marco Zullo

Proposal for a regulation
Recital 52 a (new)
(52a) Given the necessity to increase the transparency of online advertising and to combat scams and hidden marketing techniques, influencers and other actors should communicate in a clear, intelligible and visible way at the beginning of the post whether they were paid, directly or indirectly, or received free products for that post.

Amendment

(54) Very large online platforms may cause societal risks, different in scope and impact from those caused by smaller platforms. Once the number of recipients of a platform reaches a significant share of the Union population, the systemic risks the platform poses have a disproportionately negative impact in the Union. Such significant reach should be considered to exist where the number of recipients exceeds an operational threshold set at 45 million, that is, a number equivalent to 10% of the Union population and if the online platforms have an annual global turnover exceeding EUR 100 million. The operational threshold should be kept up to date through amendments enacted by delegated acts, where necessary. Such very large online platforms should therefore bear the highest standard of due diligence obligations, proportionate to their societal impact and means.
Justification

Non-profit platforms such as Telegram, Signal or DuckDuckGo cannot be deemed to be very large online platforms; otherwise they would have to change their models, which have so far been non-commercial.

Amendment 473
Jean-Lin Lacapelle, Virginie Joron

Proposal for a regulation
Recital 56

Text proposed by the Commission

(56) Very large online platforms are used in a way that strongly influences safety online, the shaping of public opinion and discourse, as well as on online trade. The way they design their services is generally optimised to benefit their often advertising-driven business models and can cause societal concerns. In the absence of effective regulation and enforcement, they can set the rules of the game, without effectively identifying and mitigating the risks and the societal and economic harm they can cause. Under this Regulation, very large online platforms should therefore assess, under the supervision of the Commission and the European Board for Digital Services, the systemic risks stemming from the functioning and use of their service, as well as by potential misuses by the recipients of the service, and take appropriate mitigating measures.

In the absence of effective regulation and enforcement, they can set the rules of the game, without effectively identifying and mitigating the risks and the societal and economic harm they can cause. Under this Regulation, very large online platforms should therefore assess the systemic risks stemming from the functioning and use of their service, as well as by potential misuses by the recipients of the service, and take appropriate mitigating measures.

Amendment

(56) Very large online platforms are used in a way that strongly influences safety online, the shaping of public opinion and discourse, as well as on online trade. The design of their services is generally optimised to benefit their often advertising-driven business models and can sometimes amplify the dissemination of illegal content. Effective regulation and enforcement is needed to effectively identify and mitigate the risks and the societal and economic harm that may arise. Under this Regulation, very large online platforms should therefore assess the systemic risks stemming from the functioning and use of their service, as well as by potential misuses by the recipients of the service, and take appropriate mitigating measures.

Amendment 475
Alexandra Geese, Rasmus Andresen, Kim Van Sparrentak
on behalf of the Greens/EFA Group

Proposal for a regulation
Recital 57

Text proposed by the Commission

(57) Three categories of systemic risks should be assessed in-depth. A first category concerns the risks associated with the misuse of their service through the dissemination of illegal content, such as the dissemination of child sexual abuse material or illegal hate speech, and the conduct of illegal activities, such as the sale of products or services prohibited by Union or national law, including counterfeit products. For example, and without prejudice to the personal responsibility of the recipient of the service

Amendment

(57) Five categories of systemic risks should be assessed in-depth. A first category concerns the risks associated with the intended use and misuse of their service through the dissemination of illegal content, such as the dissemination of child sexual abuse material or illegal hate speech, and the conduct of illegal activities, such as the sale of products or services prohibited by Union or national law, including counterfeit products and illegally traded animals. For example, and without prejudice to the personal
of very large online platforms for possible illegality of his or her activity under the applicable law, such dissemination or activities may constitute a significant systematic risk where access to such content may be amplified through accounts with a particularly wide reach. A second category concerns the impact of the service on the exercise of fundamental rights, as protected by the Charter of Fundamental Rights, including the freedom of expression and information, the right to private life, the right to non-discrimination and the rights of the child. Such risks may arise, for example, in relation to the design of the algorithmic systems used by the very large online platform or the misuse of their service through the submission of abusive notices or other methods for silencing speech or hampering competition. A third category of risks concerns the intentional and, oftentimes, coordinated manipulation of the platform’s service, with a foreseeable impact on health, civic discourse, electoral processes, public security and protection of minors or other vulnerable groups, having regard to the need to safeguard public order, protect privacy and fight fraudulent and deceptive commercial practices, including undisclosed commercial communications published by recipients of the service that are not marketed, sold or arranged by the online platform. Such risks may arise, for example, through the creation of fake accounts, the use of bots, and other automated or partially automated behaviours, which may lead to the rapid and widespread dissemination of information that is illegal content or incompatible with an online platform’s terms and conditions. A fourth category concerns negative societal effects of technology design, value chain and business-model choices in relation to systemic risks that represent threats to responsibility of the recipient of the service of very large online platforms for possible illegality of his or her activity under the applicable law, such dissemination or activities may constitute a significant systematic risk where access to such content may be amplified through accounts with a particularly wide reach. A second category concerns the impact of the service on the exercise of fundamental rights, as protected by the Charter of Fundamental Rights, including the freedom of expression and information, the right to private life, the right to non-discrimination and the rights of the child. Such risks may arise, for example, in relation to technology design choices such as the design of the algorithmic systems used by the very large online platform or the misuse of their service through the submission of abusive notices or other methods for silencing speech or hampering competition. A third category of risks concerns the intended use of, malfunctioning of, as well as the intentional and, oftentimes, coordinated manipulation of the platform’s service, with a foreseeable impact on health, civic discourse, electoral processes, public security and protection of minors or other vulnerable groups, having regard to the need to safeguard public order, protect privacy and fight fraudulent and deceptive commercial practices, including undisclosed commercial communications published by recipients of the service that are not marketed, sold or arranged by the online platform. Such risks may arise, for example, through the creation of fake accounts, the use of bots, and other automated or partially automated behaviours, which may lead to the rapid and widespread dissemination of information that is illegal content or incompatible with an online platform’s terms and conditions. A fourth category concerns negative societal effects of technology design, value chain and business-model choices in relation to systemic risks that represent threats to
democracy. A fifth category concerns environmental risks such as high electricity and water consumption, heat production and CO2 emissions related to the provision of the service and technical infrastructure or to user behaviour modification with a direct environmental impact, such as directing users to choose less sustainable options when it comes to delivery or packaging.

Proposal for a regulation
Recital 57

Text proposed by the Commission
Amendment

(57) Three categories of systemic risks should be assessed in-depth. A first category concerns the risks associated with the misuse of their service through the dissemination of illegal content, such as the dissemination of child sexual abuse material or illegal hate speech, and the conduct of illegal activities, such as the sale of products or services prohibited by Union or national law, including counterfeit products. For example, and without prejudice to the personal responsibility of the recipient of the service of very large online platforms for possible illegality of his or her activity under the applicable law, such dissemination or activities may constitute a significant systematic risk where access to such content may be amplified through accounts with a particularly wide reach. A second category concerns the impact of the service on the exercise of fundamental rights, as protected by the Charter of Fundamental Rights, including the freedom of expression and information, the right to
private life, the right to non-discrimination and the rights of the child. Such risks may arise, for example, in relation to the design of the algorithmic systems used by the very large online platform or the misuse of their service through the submission of abusive notices or other methods for silencing speech or hampering competition. A third category of risks concerns the intentional and, oftentimes, coordinated manipulation of the platform’s service, with a foreseeable impact on health, civic discourse, electoral processes, public security and protection of minors, having regard to the need to safeguard public order, protect privacy and fight fraudulent and deceptive commercial practices. Such risks may arise, for example, through the creation of fake accounts, the use of bots, and other automated or partially automated behaviours, which may lead to the rapid and widespread dissemination of information that is illegal content or incompatible with an online platform’s terms and conditions.

of expression and information, the right to private life, the right to non-discrimination and the rights of the child. Such risks may arise, for example, in relation to the design of the algorithmic systems used by the very large online platform or the misuse of their service through the submission of abusive notices or other methods for silencing speech, hampering competition or the way platforms’ terms and conditions including content moderation policies, are enforced, including through automatic means. With respect to this category of risks, a particular attention should be paid to the detrimental effect of intimidation of independent press and the harassment of journalists, in particular women who are more often victims of hateful speech and online threats. These should be considered systemic risk as referred to in Article 26 as they pose threat to democratic values, media freedom, freedom of expression and information, and should be subject to dedicated mitigating measures as referred to in Article 27, and priority notice through trusted flaggers as referred to in Article 19. A third category of risks concerns the intentional and, oftentimes, coordinated manipulation of the platform’s service, with a foreseeable impact on health, fundamental rights, civic discourse, electoral processes, public security and protection of minors, having regard to the need to safeguard public order, protect privacy and fight fraudulent and deceptive commercial practices. Such risks may arise, for example, through the creation of fake accounts, the use of bots, and other automated or partially automated behaviours, which may lead to the rapid and widespread dissemination of information that is illegal content or incompatible with an online platform’s terms and conditions.

They should give the auditor access to all relevant data

(60) Given the need to ensure verification by independent experts, very large online platforms should be accountable, through independent auditing, for their compliance with the obligations laid down by this Regulation and, where relevant, any complementary commitments undertaking pursuant to codes of conduct and crises protocols. They should give vetted auditors access to all relevant data
necessary to perform the audit properly. Auditors should also be able to make use of other sources of objective information, including studies by vetted researchers. Auditors should guarantee the confidentiality, security and integrity of the information, such as trade secrets, that they obtain when performing their tasks and have the necessary expertise in the area of risk management and technical competence to audit algorithms. Auditors should be independent, so as to be able to perform their tasks in an adequate and trustworthy manner. If their independence is not beyond doubt, they should resign or abstain from the audit engagement.

Proposal for a regulation
Recital 61 a (new)

Text proposed by the Commission

(61a) In order to ensure a participative and inclusive approach and address societal concerns raised by the services of very large online platforms, it is necessary to set up a European Social Media Council at Union level. The transparency, inclusiveness and independence of the
Council ensures that decisions on content moderation are shaped by a diverse range of expertise and perspectives. The Council should support the Agency and the Commission by issuing policy and implementation recommendations and help platforms improving and adjusting content moderation practices under terms and conditions. The Council should consist of independent experts, representatives of the recipients of the service, representatives of groups potentially impacted by their services, and civil society organisations. While not legally binding, the Councils’ recommendations will yield effective outcomes, incorporating a wider and more diverse range of inputs to societal challenges that very large online platforms may pose. Its strength and efficiency is based on voluntary compliance by platforms, whose commitment will be to respect and execute the Council’s recommendations in good faith. In order to function efficiently, the Council and its members should have sufficient human, material and financial resources at their disposal.

algorithmically suggesting, ranking and prioritising information, distinguishing through text or other visual representations, or otherwise curating information provided by recipients. Such recommender systems can have a significant impact on the ability of recipients to retrieve and interact with information online. They also play an important role in the amplification of certain messages, the viral dissemination of information and the stimulation of online behaviour. Consequently, very large online platforms should ensure that recipients are appropriately informed, and can influence the information presented to them. They should clearly present the main parameters for such recommender systems in an easily comprehensible manner to ensure that the recipients understand how information is prioritised for them. They should also ensure that the recipients enjoy alternative options for the main parameters, including options that are not based on profiling of the recipient.

Justification

This recital is being moved up to a new recital 52a new.

Amendment

(62) A core part of a very large online platform’s business is the manner in which information is prioritised and presented on its online interface to facilitate and optimise access to information for the recipients of the service. This is done, for
example, by algorithmically suggesting, ranking and prioritising information, distinguishing through text or other visual representations, or otherwise curating information provided by recipients. Such recommender systems can have a significant impact on the ability of recipients to retrieve and interact with information online. They also play an important role in the amplification of certain messages, the viral dissemination of information and the stimulation of online behaviour. Consequently, very large online platforms should ensure that recipients are appropriately informed, and can influence the information presented to them. They should clearly present the main parameters for such recommender systems in an easily comprehensible manner to ensure that the recipients understand how information is prioritised for them. They should also ensure that the recipients enjoy alternative options for the main parameters, including options that are not based on profiling of the recipient.

Moreover, these recommender systems can also impact media consumption and cultural practices of users, and may risk locking them into a bubble without providing them with the possibility to open up to other content. Consequently, very large online platforms should ensure that recipients are appropriately informed, and can influence the information presented to them. They should clearly present the main parameters for such recommender systems in an easily comprehensible manner to ensure that the recipients understand how information is prioritised for them. They should also ensure that the recipients enjoy alternative options for the main parameters, including options that are not based on profiling of the recipient.

on behalf of the Greens/EFA Group

Proposal for a regulation
Recital 62 a (new)

Text proposed by the Commission

(62a) Recommender systems used by very large online platforms pose a particular risk in terms of consumer choice and lock-in effects. Consequently, in addition to the obligations applicable to all online platforms, very large online platforms should ensure that recipients are appropriately informed, and can influence the information presented to them. They should clearly present the main parameters for such recommender systems in an easily comprehensible manner to ensure that the recipients understand how information is prioritised for them. They should also ensure that the recipients enjoy alternative options for the main parameters, including options that are not based on profiling of the recipient. This option must be easily accessible and must correspond to a predefined parameter profile.

Or. fr
platforms should offer to the recipients of the service the choice of using recommender systems from third party providers, where available. Such third parties must be offered access to the same operating system, hardware or software features that are available or used in the provision by the platform of its own recommender systems, including through application programming interfaces.

Or. en

Justification

In line with the IMCO INL (P9_TA(2020)0272), paragraph 81 and Chapter VII of the Annex.
