DRAFT OPINION

of the Committee on Industry, Research and Energy

for the Committee on the Environment, Public Health and Food Safety

Rapporteur (*): Alejo Vidal-Quadras(*) Associated committee – Rule 50 of the Rules of Procedure
SHORT JUSTIFICATION

I. Introduction

The promotion of biofuels has been one of the essential elements of EU policy in the areas of energy and climate change. The reasons behind this are diverse and sensible: biofuels not only increase transport sustainability but also improve security of energy supply and support economic development by creating new sources of income in rural areas.

The main driver for their development has been the fight against climate change. The transport sector has been a priority in the EU's efforts to reduce greenhouse gas emissions as it is responsible for almost 20% of them, which makes it the second biggest greenhouse gas emitting sector after energy. Although biofuels are not the only available means to progressively decarbonise this sector, they in practice constitute the main tool to switch from fossil fuel-fed transport to renewable based transport and the only possibility in the case of air and maritime transport.

In addition, biofuels represent an opportunity both to reduce the EU’s energy dependency, which stands at around 50% and is expected to increase, and to promote development of the European agricultural sector.

In light of these advantages, the EU has adopted Directive 2003/30/EC on the promotion of the use of biofuels or other renewable fuels for transport ("the Biofuels Directive") and Directive 2009/28/EC on the promotion of the use of energy from renewable sources ("the Renewable Energy Directive"), which have boosted investments in biofuel production. The Biofuels Directive established a non-mandatory target of a 5.75% share of biofuels in transport by 2010. The Renewable Energy Directive, which repealed the Biofuels Directive, created a binding target: the share of energy from renewable sources in the transport sector must amount to at least 10% of final energy consumption in the sector by 2020. This provision is complementary to the mandatory target set out in Directive 98/70/EC ("the Fuel Quality Directive"), which demands a 6% reduction in the greenhouse gas intensity of fuels used in road transport and non-road mobile machinery.

However, as with any other energy source, biofuels have some negative impacts. Recognising this fact and in response to the Renewable Energy Directive mandate, the Commission has proposed to amend the latter and the Fuel Quality Directive in order to minimise the impact of indirect land-use change (ILUC)\(^1\) on greenhouse gas emissions.

II. Main points identified by the rapporteur

The rapporteur acknowledges that ILUC is a phenomenon which must be addressed as its effects are harmful for the environment and thwart EU policy to reduce CO2 emissions.

---

\(^1\) When biofuels are produced on existing agricultural land, the demand for food and feed crops remains, and may lead to someone producing more food and feed somewhere else. This can imply land use change (by changing e.g. forest into agricultural land), which implies that a substantial amount of CO2 emissions are released into the atmosphere.
However, the rapporteur believes measures adopted with regards to biofuels must be based on a balanced approach which takes into account all the interests at stake.

a) ILUC factors

The rapporteur agrees with the Commission that the ILUC science is imprecise because this phenomenon cannot be directly observed or measured and that the estimated indirect land-use change emissions are, despite better understanding and recent scientific improvements, vulnerable to the deficiencies and limits of the models used to give a specific value of emissions derived from ILUC to the different types of crops. Therefore, not enough scientific evidence is available to introduce ILUC factors into EU legislation.

Moreover, the use of ILUC factors would have significant negative impacts. On the one hand, their use would put an end to the EU biodiesel industry, which, apart from the obvious economic consequences, would ignore the ongoing dieselisation of the fleet in Europe and would make it impossible to comply with the Renewable Energy Directive and Fuel Quality Directive targets. On the other hand, the need to constantly update these values would create uncertainty for industry, preventing investments in any kind of conventional biofuel and thereby limiting the production of ethanol as well.

Hence, the rapporteur considers that, contrary to the Commission proposal, no mention of the ILUC factor should be included in the Directives, not even for a reporting obligation.

b) 5% cap on conventional biofuels

This measure would represent a major change in legislation which had created a stable and predictable regulatory framework and whose last milestone, the Renewable Energy Directive, was approved in 2009. The 5% cap would harm those who, relying on the Renewable Energy Directive, counted on biofuels as the only technologically viable fuel to enable Member States to comply with the targets set out for 2020. As the 5% figure makes reference to the average production level in the EU, there are several Member States such as Germany, Spain and France in which the current quota of conventional biofuels is higher than 5% and which would therefore be more affected than others.

In addition, if a ceiling is put on biofuels which are commercially available, the 10% renewable energy goal and the 6% greenhouse gas reduction goal would be out of reach because the other alternatives, including advanced biofuels, could not fill the gap for the moment.

For all these reasons and taking into account that biofuels on average still save emissions compared to fossil fuels, the rapporteur suggests a more constructive approach which would consist in setting a sub-target for advanced biofuels. This sub-target would boost advanced biofuel production and thus CO2 savings, and would send a strong signal in support of a gradual transition from conventional to advanced biofuels, to the extent technological progress allows, whilst minimising harmful effects for European industry.

The rapporteur also considers that the Commission's proposal overlooks ILUC mitigation measures such as production on unused or degraded land, increased yield performance and production of co-products (especially protein for animal feed, of which Europe has a deficit).
Feedstocks that demonstrate that the risk of ILUC has been mitigated or avoided should be incentivised.

Finally, the rapporteur agrees with the Commission on strengthening the sustainability criteria for biofuels produced in new installations by demanding a 60% greenhouse gas emission saving for those starting operation after 1st July 2014.

c) Multiple counting

The laudable intention of multiple counting for second and third generation biofuels is to allow Member States to comply with the 10% renewable energy target as they would be able to count them twice or four times, filling the gap left by the 5% cap. However, if no cap is applied and a sub-target for advanced biofuels is established, multiple counting is no longer necessary.

Moreover, in the end multiple counting is counterproductive as it means fewer advanced biofuels are used. For a biofuel counted twice or four times towards the quota, twice or four times less would be used and the difference would have to be filled with fossil fuels. Also, less would be invested in production capacity as the actual market size would be reduced by somewhere between two and four times.

In fact, in order to mitigate the ILUC phenomenon, we would give up on our 10% target of renewables in transport energy consumption.
AMENDMENTS

The Committee on Industry, Research and Energy calls on the Committee on the Environment, Public Health and Food Safety, as the committee responsible, to incorporate the following amendments in its report:

Amendment 1
Proposal for a directive
Recital 5

Text proposed by the Commission

(5) Based on forecasts of biofuel demand provided by the Member States and estimates of indirect land-use change emissions for different biofuel feedstocks it is likely that greenhouse gas emissions linked to indirect land use change are significant, and could negate some or all of the greenhouse gas savings of individual biofuels. This is because almost the entire biofuel production in 2020 is expected to come from crops grown on land that could be used to satisfy food and feed markets. In order to reduce such emissions, it is appropriate to distinguish between crop groups such as oil crops, cereals, sugars and other starch containing crops accordingly.

Amendment

(5) Based on forecasts of biofuel demand provided by the Member States and estimates of indirect land-use change emissions for different biofuel feedstocks, there is a risk that greenhouse gas emissions linked to indirect land use change could be significant, and could negate some or all of the greenhouse gas savings of individual biofuels. This is because almost the entire biofuel production in 2020 is expected to come from crops grown on land that could be used to satisfy food and feed markets.

Or. en

Amendment 2
Proposal for a directive
Recital 6

Text proposed by the Commission

(6) Liquid renewable fuels are likely to be required by the transport sector in order to reduce its greenhouse gas emissions.

Amendment

(6) Liquid renewable fuels are likely to be required by the transport sector in order to reduce its greenhouse gas emissions.
Advanced biofuels, such as those made from wastes and algae, provide high greenhouse gas savings with low risk of causing indirect land use change and do not compete directly for agricultural land for the food and feed markets. It is appropriate, therefore, to encourage greater production of such advanced biofuels as these are currently not commercially available in large quantities, in part due to competition for public subsidies with established food crop based biofuel technologies. Further incentives should be provided by increasing the weighting of advanced biofuels towards 10% target for transport set in Directive 2009/28/EC compared to conventional biofuels. This context, only advanced biofuels with low estimated indirect land use change impacts and high overall greenhouse gas savings should be supported as part of the post 2020 renewable energy policy framework.

**Amendment 3**

Proposal for a directive

**Recital 9**

_text proposed by the Commission_

(9) To prepare for the transition towards advanced biofuels and minimise the overall indirect land use change impacts in the period to 2020, it is appropriate to **limit the amount of biofuels and bioliquids obtained from food crops as set out in part A of Annex VIII to Directive 2009/28/EC and part A of Annex V to Directive 98/70/EC that can be counted towards targets set out in Directive 2009/28/EC. Without restricting the overall use of such biofuels, the share of biofuels and bioliquids produced from cereal and other starch rich crops, sugar and oil crops that

**Amendment**

(9) To prepare for the transition towards advanced biofuels and minimise the overall indirect land use change impacts in the period to 2020, it is appropriate to **establish mandatory targets for advanced biofuels according to a timetable that will provide predictability and stability for investors.**
can be counted towards the targets of Directive 2009/28/EC should be limited to the share of such biofuels and bioliquids consumed in 2011.

Amendment 4
Proposal for a directive
Recital 10

Text proposed by the Commission

(10) The 5% limit set up in Article 3(4)d does not affect the Member States’ freedom to arrange their own trajectory as to compliance with this prescribed share of conventional biofuels within the overall 10% target. As a consequence, the access to the market of the biofuels produced by the installations in operation before the end of 2013 remains fully open. Therefore this amending directive does not affect the legitimate expectations of the operators of such installations.

Amendment 5
Proposal for a directive
Recital 11

Text proposed by the Commission

(11) The estimated indirect land-use change emissions should be included in the reporting of greenhouse gas emissions from biofuels under Directives 98/70/EC and 2009/28/EC. Biofuels made from feedstocks that do not lead to additional demand for land, such as those from waste feedstocks, should be assigned a zero emissions factor.

Amendment

(11) The Commission's impact assessment has shown that the estimated indirect land-use change emissions are, despite better understanding and recent scientific improvements, vulnerable to the deficiencies and limits of the models used to give a specific value of emissions derived from ILUC to the different types of crops. Therefore, the figures are not certain enough to be introduced in a piece
Amendment 6
Proposal for a directive
Recital 12

Text proposed by the Commission

(12) The Commission should review the methodology for estimating land-use change emission factors included in Annexes VIII and V to Directives 2009/28/EC and 98/70/EC respectively in the light of adaptation to technical and scientific progress. To this end, and if warranted by the latest available scientific evidence, the Commission should consider the possibility of revising the proposed crop group indirect land-use change factors, as well as introducing factors at further levels of disaggregation and including additional values should new biofuel feedstocks come to market.

Amendment

(12) The Commission should periodically review the list of available advanced biofuels as laid down in Annex IX in order to take account of technical and scientific progress.

Amendment 7
Proposal for a directive
Recital 13

Text proposed by the Commission

(13) Article 19(8) of Directive 2009/28/EC and Article 7d(8) of Directive 98/70/EC include provisions for encouraging the cultivation of biofuels in severely degraded and heavily contaminated land as an interim measure for mitigating against indirect land-use change. These provisions are no longer adequate in their current form and need to be integrated in the approach laid out in this Directive to

Amendment

(13) Article 19(8) of Directive 2009/28/EC and Article 7d(8) of Directive 98/70/EC include provisions for encouraging the cultivation of biofuels in severely degraded and heavily contaminated land as a measure for mitigating against indirect land-use change. Other ILUC mitigation measures, such as the use of co-products, yield increases, manufacturing efficiencies and crop production on
ensure that overall actions for minimising emission from indirect land-use change remain coherent.

abandoned or unused land, should be assessed by the Commission in view of incorporating them into the Directives in terms of a bonus like the one already set out in Annex IV part C point 7 of Directive 98/70/EC and in Annex V part C point 7 of Directive 2009/28/EC for biomass obtained from restored degraded land.

Amendment 8
Proposal for a directive
Recital 18

Text proposed by the Commission

(18) In order to permit adaptation to technical and scientific progress of Directive 98/70/EC, the power to adopt acts in accordance with Article 290 of the Treaty on the Functioning of the European Union should be delegated to the Commission in respect of the mechanism to monitor and reduce greenhouse gas emissions, the methodological principles and values necessary for assessing whether sustainability criteria have been fulfilled in relation to biofuels, criteria and geographic ranges for determining highly diverse grassland, the methodology for the calculation and reporting of lifecycle greenhouse gas emissions, the methodology for the calculation of indirect land-use change emissions, the permitted level related to the metallic additives content in fuels, the permitted analytical methods related to the fuel specifications and the vapour pressure waiver permitted for petrol containing bioethanol.

Amendment

(18) In order to permit adaptation to technical and scientific progress of Directive 98/70/EC, the power to adopt acts in accordance with Article 290 of the Treaty on the Functioning of the European Union should be delegated to the Commission in respect of the mechanism to monitor and reduce greenhouse gas emissions, the methodological principles and values necessary for assessing whether sustainability criteria have been fulfilled in relation to biofuels, criteria and geographic ranges for determining highly diverse grassland, the methodology for the calculation and reporting of lifecycle greenhouse gas emissions, the permitted level related to the metallic additives content in fuels, the permitted analytical methods related to the fuel specifications and the vapour pressure waiver permitted for petrol containing bioethanol.

Or. en
Amendment 9
Proposal for a directive
Recital 19

Text proposed by the Commission

(19) In order to permit adaptation to
technical and scientific progress of
Directive 2009/28/EC, the power to adopt
acts in accordance with Article 290 of the
Treaty on the Functioning of the European
Union should be delegated to the
Commission in respect of the list of biofuel
feedstocks that are counted multiple times
towards the target set in Article 3(4), the
energy content of transport fuels, criteria
and geographic ranges for determining
highly biodiverse grassland, the
methodology for the calculation of
indirect land-use change emissions, and
the methodological principles and values
necessary for assessing whether
sustainability criteria have been fulfilled in
relation to biofuels and bioliquids.

Amendment

(19) In order to permit adaptation to
technical and scientific progress of
Directive 2009/28/EC, the power to adopt
acts in accordance with Article 290 of the
Treaty on the Functioning of the European
Union should be delegated to the
Commission in respect of the list of advanced biofuels, the energy content of
transport fuels, criteria and geographic
ranges for determining highly biodiverse
grassland, and the methodological
principles and values necessary for
assessing whether sustainability criteria
have been fulfilled in relation to biofuels
and bioliquids.

Amendment 10
Proposal for a directive
Recital 20

Text proposed by the Commission

(20) The Commission should review the
effectiveness of the measures introduced
by this Directive, based on the best and
latest available scientific evidence, in
limiting indirect land-use change
greenhouse gas emissions and addressing
ways to further minimise that impact,
which could include the introduction of
estimated indirect land-use change
emission factors in the sustainability
scheme as of 1st January 2021.

Amendment

(20) The Commission should review the
effectiveness of the measures introduced
by this Directive, based on the best and
latest available scientific evidence, in
limiting indirect land-use change
greenhouse gas emissions and addressing
ways to further minimise that impact.

Or. en
Amendment 11
Proposal for a directive
Article 1 – point 1 – point a
Directive 98/70/EC
Article 7a – paragraph 6

Text proposed by the Commission

(a) the following paragraph 6 is inserted: deleted

"6. Fuel suppliers shall by 31 March each year report to the authority designated by the Member State, the biofuel production pathways, volumes, and the life cycle greenhouse gas emissions per unit of energy, including the estimated indirect land-use change emissions set out in Annex V Member States shall report these data to the Commission."

Or. en

Amendment 12
Proposal for a directive
Article 1 – point 2 – point -a (new)
Directive 98/70/EC
Article 7b – paragraph 1

Text proposed by the Commission

(-a) in paragraph 1 the second subparagraph is deleted.

Or. en

Justification

Advanced biofuels must be subject to the same sustainability criteria as conventional biofuels. The exceptions with regard to the sustainability requirements for certain wastes and residual substances would result in the fact, for example, that biodiesel from palm oil wastes would then be subsidised even if the palm oil has been produced in an unsustainable way.
Amendment 13
Proposal for a directive
Article 1 – point 3 – point a
Directive 98/70/EC
Article 7d – paragraph 6

Text proposed by the Commission

6. The Commission shall be empowered to adopt delegated acts pursuant to Article 10a concerning the adaptation to technical and scientific progress of Annex V, including by the revision of the proposed crop group indirect land-use change values; the introduction of new values at further levels of disaggregation; the inclusion of additional values should new biofuel feedstocks come to market as appropriate, review the categories of which biofuels are assigned zero indirect land-use change emissions; and the development of factors for feedstocks from non-food cellulosic and ligno-cellulosic materials.

Amendment

deleted

Or. en

Amendment 14
Proposal for a directive
Article 1 – point 3 – point c a (new)
Directive 98/70/EC
Article 7d – paragraph 8 a (new)

Text proposed by the Commission

(ca) the following paragraph 8a is inserted:

"8a. The Commission shall be empowered to adopt delegated acts in accordance with Article 10a concerning the establishment of detailed definitions, including technical specifications, required for the categories set out in point 9 of Part C of Annex IV".

Amendment 32
Proposal for a directive
Article 2 – point 11
Directive 2009/28/EC
Article 25b – paragraph 5

Text proposed by the Commission

5. A delegated act adopted pursuant to Article 3(4)(d), Article 5(5), the third subparagraph of Article 17(3)(c), Articles 19(5), 19(6) and 19(7) shall enter into force only if no objection has been expressed either by the European Parliament or the Council within a period of 2 months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by 2 months at the initiative of the European Parliament or the Council.

Amendment

5. A delegated act adopted pursuant to point (oa) of Article 2, Article 5(5), the third subparagraph of Article 17(3)(c), Articles 19(5), 19(7) and 19(8) shall enter into force only if no objection has been expressed either by the European Parliament or the Council within a period of 2 months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by 2 months at the initiative of the European Parliament or the Council.
Amendment 33
Proposal for a directive
Article 3

Text proposed by the Commission

The Commission shall, before 31 December 2017, submit a report to the European Parliament and to the Council reviewing, on the basis of the best latest available scientific evidence, the effectiveness of the measures introduced by this Directive in limiting indirect land-use change greenhouse gas emissions associated with the production of biofuel and bioliquids. The report shall, if appropriate, be accompanied by a legislative proposal based on the best available scientific evidence, for introducing estimated indirect land use change emissions factors into the appropriate sustainability criteria to be applied from 1st January 2021 and a review of the effectiveness of the incentives provided for biofuels from non-land using feedstocks and non-food crops under Article 3(4)d of Directive 2009/28/EC.

Amendment

The Commission shall, before 31 December 2018, submit a report to the European Parliament and to the Council reviewing, on the basis of the best latest available scientific evidence, the effectiveness of the measures introduced by this Directive in limiting indirect land-use change greenhouse gas emissions associated with the production of biofuel and bioliquids.

Amendment 34
Proposal for a directive
Annex I

Text proposed by the Commission

Annex I

deleted

Amendment

Or. en
Amendment 35
Proposal for a directive
Annex II – point 1
Directive 2009/28/EC
Annex V – part C

Text proposed by the Commission

Amendment

(1) Annex V, part C is amended as follows:

(a) point 7 is replaced by the following:

"7. Annualised emissions from carbon stock changes caused by land-use change, \( e_b \), shall be calculated by dividing total emissions equally over 20 years. For the calculation of these emissions the following rule shall be applied:

\[
e_l = (CSR - CSA) \times 3,664 \times \frac{1}{20} \times \frac{1}{P},
\]

where

\( e_l \) = annualised greenhouse gas emissions from carbon stock change due to land-use change (measured as mass (grams) of CO2-equivalent per unit biofuel energy (megajoules));

\( CSR \) = the carbon stock per unit area associated with reference land use (measured as mass (tonnes) of carbon per unit area, including both soil and vegetation). The reference land-use shall be the land-use in January 2008 or 20 years before the raw material was obtained, whichever was the later;

\( CSA \) = the carbon stock per unit area associated with actual land use (measured as mass (tonnes) of carbon per unit area, including both soil and vegetation). In cases where the carbon stock accumulates over more than one year, the value attributed to \( CSA \) shall be the estimated stock per unit area after 20 years or when the crop reaches maturity, whichever the earlier; and
**P = the productivity of the crop (measured as biofuel or bio liquid energy per unit area per year).**"

(b) points 8 and 9 are deleted.

Amendment 36
Proposal for a directive
Annex II – point 2
Directive 2009/28/EC
Annex VIII (new)

**Text proposed by the Commission**

(2) The following Annex VIII is added:

"Annex VIII

Part A. Estimated indirect land-use change emissions from biofuels and bioliquid feedstocks

<table>
<thead>
<tr>
<th>Feedstock group</th>
<th>Estimated indirect land-use change emissions (gCO₂eq/MJ)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cereals and other starch rich crops</td>
<td>12</td>
</tr>
<tr>
<td>Sugars</td>
<td>13</td>
</tr>
<tr>
<td>Oil crops</td>
<td>55</td>
</tr>
</tbody>
</table>

Part B. Biofuels for which the estimated indirect land-use change emissions are considered to be zero

Biofuels produced from the following feedstock categories will be considered to have estimated indirect land-use change emissions of zero:

a) feedstocks which are not included under Part A of this Annex.

b) feedstocks whose production has led to direct land use change, i.e. a change from one of the following IPCC land cover
categories; forest land, grassland, wetlands, settlements, or other land, to cropland or perennial cropland\(^1\). In such a case a "direct land use change emission value (e) should have been calculated in accordance to Part C, paragraph 7 of Annex V."

\(^1\) OJ L 273, 10.10.2002, p. 1

Amendment 37
Proposal for a directive
Annex II – point 3
Directive 2009/28/EC
Annex IX (new)

**Part A. Feedstocks whose contribution towards the target referred to in Article 3(4) shall be considered to be four times their energy content**

(a) Algae.

(c) Biomass fraction of industrial waste.

(d) Straw.

(e) Animal manure and sewage sludge.

(f) Palm oil mill effluent and empty palm fruit bunches.

(g) Tall oil pitch.

**List of advanced biofuels**

The Biofuel coming from the following feedstocks will be considered advanced biofuels

(a) Algae.

(c) Biomass fraction of industrial waste.

(d) Straw.

(e) Animal manure and sewage sludge.

(f) Palm oil mill effluent and empty palm fruit bunches.

(g) Tall oil pitch.
(h) Crude glycerine.
(i) Bagasse.
(j) Grape marc and wine lees.
(k) Nut shells.
(l) Husks.
(m) Cobs
(n) Bark, branches, leaves, saw dust and cutter shavings.

**Part B. Feedstocks whose contribution towards the target referred to in Article 3(4) shall be considered to be twice their energy content**

(a) Used cooking oil.
(b) Animal fats classified as category I and II in accordance with EC/1774/2002 laying down health rules concerning animal by-products not intended for human consumption¹.
(c) Non-food cellulosic material.
(d) Ligno-cellulosic material except saw logs and veneer logs.

(o) Used cooking oil.
(p) Animal fats classified as category I and II in accordance with EC/1774/2002 laying down health rules concerning animal by-products not intended for human consumption².
(q) Non-food cellulosic material.
(r) Ligno-cellulosic material except saw logs and veneer logs.
