COMPROMISE AMENDMENTS
1 - 11

Draft opinion
Tiemo Wölken
Establishing a framework of measures for strengthening Europe’s net-zero technology products manufacturing ecosystem (Net Zero Industry Act)

Proposal for a regulation
(COM(2023)0161 – C9-0062/2023 – 2023/0081(COD))
Compromise Amendment 1 - Article 1 - Subject Matter
EPP, S&D, Renew, Greens, The Left
Compromise amendment replacing Amendments 185-213, 720, 723

Proposal for a regulation
Article 1 – paragraph 1

**Text proposed by the Commission**

1. This Regulation establishes the framework of measures for innovating and scaling up the manufacturing capacity of net-zero technologies in the Union to support the Union’s 2030 target of reducing net greenhouse gas emissions by at least 55 % relative to 1990 levels and the Union’s 2050 climate neutrality target, as defined by Regulation (EU) 2021/1119, and to ensure the Union’s access to a secure and sustainable supply of net-zero technologies needed to safeguard the resilience of the Union’s energy system and to contribute to the creation of quality jobs.

**Amendment**

1. This Regulation establishes the framework of measures for coordinating, innovating and scaling up the manufacturing capacity of commercially available net-zero technologies and innovative net-zero technologies in the Union to support the Union’s 2030 target of reducing net greenhouse gas emissions by at least 55 % relative to 1990 levels and the Union’s 2050 climate neutrality target, as defined by Regulation (EU) 2021/1119, and to ensure the Union’s access to a secure and sustainable supply of net-zero technologies, including specific components and machinery, needed to safeguard the resilience of the Union’s energy system, and to promote development, testing and validation of innovative net-zero technologies, while contributing to the creation of quality jobs.

Proposal for a regulation
Article 1 – paragraph 3

**Text proposed by the Commission**

3. Where, based on the report referred to in Article 35, the Commission concludes that the Union is likely not to achieve the objectives set out in paragraph 1, it shall assess the feasibility and proportionality of proposing measures or exercising its powers at Union level in order to ensure the achievement of those objectives.

**Amendment**

3. Where, based on the report referred to in Article 35, the Commission concludes that the Union is likely not to achieve the objectives set out in this Article, it shall assess the feasibility and proportionality of proposing measures, including by means of a legislative proposal, or exercising its powers at Union level in order to ensure the achievement of those objectives.

Or. en
Proposal for a regulation
Article 1 – paragraph 2 – point a

Text proposed by the Commission
a) that by 2030, manufacturing capacity in the Union of the strategic net-zero technologies listed in the Annex approaches or reaches a benchmark of at least 40% of the Union’s annual deployment needs for the corresponding technologies necessary to achieve the Union’s 2030 climate and energy targets;

Amendment
a) that by 2030, manufacturing capacity in the Union of the strategic net-zero technologies listed in the Annex I, including the primarily used key components and machinery required for their manufacture, reaches a benchmark of at least 40% of the Union’s annual deployment needs for the corresponding technologies necessary to achieve the Union’s 2030 climate and energy targets;

Where by [date of entry into force of this Regulation], the manufacturing capacity in the Union of a strategic net-zero technology listed in the Annex has already reached a benchmark of at least 30% of the Union’s annual deployment needs, the benchmark target for this strategic net-zero technology shall be increased by 20 percentage points in relation to its current benchmark performance;

Compromise Amendment 2 - Definition of net-zero technologies
EPP, S&D, Renew, Greens/EFA, The Left

Compromise amendment replacing Amendments 214-231, 742, 753-756
Proposal for a regulation
Article 3 – paragraph 1 – point a

Text proposed by the Commission

(a) ‘net-zero technologies’ means renewable energy technologies\textsuperscript{66}; electricity and heat storage technologies; heat pumps; grid technologies; renewable fuels of non-biological origin technologies; sustainable alternative fuels technologies\textsuperscript{67}; electrolysers and fuel cells; \textit{advanced technologies to produce energy from nuclear processes with minimal waste from the fuel cycle, small modular reactors, and related best-in-class fuels}; carbon capture, \textit{utilisation}, and storage technologies; \textit{and energy-system related energy efficiency technologies}. They refer to the final products, specific components and specific machinery primarily used for the production of those products. They shall have reached a technology readiness level of at least 8.

\textsuperscript{66} ‘renewable energy’ means ‘renewable energy’ as defined in Directive (EU)

Amendment

(a) ‘net-zero technologies’ means renewable energy technologies \textit{naming wind, solar (solar thermal and solar photovoltaic), and geothermal energy}; electricity and heat storage technologies; heat pumps; grid technologies; \textit{clean energy based on innovative water technologies}; advanced biofuels as defined in Directive (EU) 2018/2001 Annex IX part A; renewable fuels of non-biological origin technologies, \textit{including hydrogen for use in sectors which cannot be directly electrified}; sustainable alternative fuels technologies \textit{meaning e-fuel production for aviation and shipping from e-ammonia, e-methanol, e-liquid H2 and e-kerosene}; electrolysers and fuel cells; \textit{environmentally safe carbon capture, transport and storage technologies, environmentally safe direct capture of CO2 from the atmosphere (DACS) and carbon capture and utilisation (CCU) with safe, sustainable and permanent storage of CO2, in particular for unavoidable industrial process emissions}; energy-system related energy efficiency technologies; \textit{manufacturing technologies for improving energy and material efficiency in industrial processes}. They refer to the \textit{commercially available} final products, specific components and specific machinery primarily used for the production of those products. They shall have reached a technology readiness level of at least 8.

Or. en

Compromise Amendment 2A - Alternative CA on Definition of net-zero technologies EPP, Renew, ECR

Compromise amendment replacing Amendments: CA 2, 214-231

Proposal for a regulation

Article 3 – paragraph 1 – point a

Text proposed by the Commission

(a) ‘net-zero technologies’ means renewable energy technologies; electricity and heat storage technologies; heat pumps; grid technologies; renewable fuels of non-biological origin technologies; sustainable alternative fuels technologies; electrolyzers and fuel cells; advanced technologies to produce energy from nuclear processes with minimal waste from the fuel cycle, small modular reactors, and related best-in-class fuels; carbon capture, utilisation, and storage technologies; and energy-system related energy efficiency technologies. They refer to the final products, specific components and specific machinery primarily used for the production of those products. They shall have reached a technology readiness level of at least 8.

Amendment

(a) ‘net-zero technologies’ means renewable energy technologies namely wind, solar (solar thermal and solar photovoltaic), and geothermal energy; electricity and heat storage technologies; heat pumps; grid technologies; clean energy based on innovative water technologies; advanced biofuels as defined in Directive (EU) 2018/2001 Annex IX part A; renewable fuels of non-biological origin technologies, including hydrogen for use in sectors which cannot be directly electrified; sustainable alternative fuels technologies meaning e-fuel production for aviation and shipping from e-ammonia, e-methanol, e-liquid H2 and e-kerosene; electrolyzers and fuel cells; technologies, including the fuel cycle, to produce energy from
nuclear processes with minimal waste, including small modular reactors; environmentally safe carbon capture, transport and storage technologies, environmentally safe direct capture of CO2 from the atmosphere (DACS) and carbon capture and utilisation (CCU) with safe, sustainable and permanent storage of CO2, in particular for unavoidable industrial process emissions; energy-system related energy efficiency technologies; manufacturing technologies for improving energy and material efficiency in industrial processes. They refer to the commercially available final products, specific components and specific machinery primarily used for the production of those products. They shall have reached a technology readiness level of at least 8.

Compromise Amendment 3 - Article 3 - Other definitions
EPP, S&D, Renew, Greens/EFA, The Left

Compromise amendment replacing Amendments 232-263
Proposal for a regulation
Article 3 – paragraph 1 – point (b) - (qa)

Proposal for a regulation
Article 3 – paragraph 1 – point b a (new)

Text proposed by the Commission

(ba) ‘primarily used’ means specific components and specific machinery, including the specific components and specific machinery set out in Annex Ia, where a minimum of 60 per cent of output is used for the production of net-zero technologies. Where this cannot be demonstrated, a competent authority can qualify specific components and specific machinery as ‘primarily used’ based on evidence provided by the project promoter, such as, market studies or off-take agreements after approval.
from the Commission that those specific components and specific machinery can be considered as primarily used in the context of this Regulation;

Proposal for a regulation
Article 3 – paragraph 1 – point c

_text proposed by the Commission_

(c) ‘innovative net-zero technologies’ means technologies which satisfy the definition of ‘net-zero technologies’, except that they have not reached a technology readiness level of at least 8, and that comprise genuine innovation which are not currently available on the market and are advanced enough to be tested in a controlled environment.

_amendment_

(c) ‘innovative net-zero technologies’ means technologies that have not yet reached market readiness, and that comprise genuine innovation which helps to reduce strategic dependencies and to achieve the objectives of this Regulation through improved energy, material or resource efficiency, pollution prevention, circularity or reduced climate impact, and which are advanced enough to be tested in a controlled environment without risk to the environment or public health.

Proposal for a regulation
Article 3 – paragraph 1 – point q

_text proposed by the Commission_

(q) ‘CO2 injection capacity’ means the annual amount of CO2 that can be injected in an operational geological storage site, permitted under Directive 2009/31/EC, with the purpose to reduce emissions or increase carbon removals, in particular from large scale industrial installations and which is measured in tonnes per annum;

_amendment_

(q) ‘CO2 injection capacity’ means the annual amount of CO2 that can be injected in an operational geological storage site such as depleted oil and gas fields or saline aquifers, permitted under Directive 2009/31/EC, with the purpose to reduce emissions or increase carbon removals, in particular from large scale industrial installations and which is measured in tonnes per annum;
Compromise Amendment 4 - Article 7
EPP, S&D, Renew, Greens/EFA, The Left

Compromise amendment replacing Amendments: 311-365

Proposal for a regulation
Article 7 – paragraph 1

Text proposed by the Commission

1. Where an environmental impact assessment must be carried out in accordance with Articles 5 to 9 of Directive 2011/92/EU, the project promoter concerned shall request an opinion to the competent authority referred to in Article 4 on the scope and level of detail of the information to be included in the environmental impact assessment report pursuant to Article 5(1) of that Directive. The national competent authority shall ensure that the opinion referred to in the first subparagraph is issued as soon as possible and within a period of time not exceeding 30 days from the date on which the project promoter submitted its request.

Amendment

1. Where an environmental impact assessment must be carried out in accordance with Directive 2011/92/EU, the project promoter concerned shall request an opinion to the competent authority referred to in Article 4 on the scope and level of detail of the information to be included in the environmental impact assessment report pursuant to Article 5(1) of that Directive. The national competent authority shall ensure that the opinion referred to in the first subparagraph is issued as soon as possible and within a period of time not exceeding 20 days without exception from the date on which the project promoter submitted its request, provided that this request includes all required documentation. Competent authorities shall provide a list of required documentation to the project promoter at the outset of their request, aim to streamline the process and guide the project promoter through the process.

Proposal for a regulation
Article 7 – paragraph 3

Text proposed by the Commission

3. The national competent authority shall ensure that the authorities concerned

Amendment

3. The national competent authority shall ensure that the authorities concerned
issue a reasoned conclusion as referred to in Article 1(2), point (g)(iv) of Directive 2011/92/EU on the environmental impact assessment within three months of receiving all necessary information gathered pursuant to Articles 5, 6 and 7 of that Directive and completing the consultations referred to in Articles 6 and 7 of that Directive.

issue a reasoned conclusion as referred to in Article 1(2), point (g)(iv) of Directive 2011/92/EU on the environmental impact assessment within 80 days of receiving all information gathered pursuant to Articles 5, 6 and 7 of that Directive, verifying its quality, and completing the consultations referred to in Articles 6 and 7 of that Directive.

Proposal for a regulation
Article 7 – paragraph 2 – subparagraph 3 a (new)

Text proposed by the Commission

Amendment

The application of the joint or coordinated procedure shall not affect the content of the environmental impact assessment.

Proposal for a regulation
Article 7 – paragraph 3 a (new)

Text proposed by the Commission

Amendment

3a. In exceptional cases, where the nature, complexity, location or size of the proposed project so require, the national competent authority referred to in Article 8(1) may extend the time limits referred to in paragraph 3 by a maximum of 30 days, before their expiry and on a case-by-case basis. In that event, the national competent authority referred to in Article 8(1) shall inform the project promoter of the reasons justifying the extension and of the date when the reasoned conclusion is expected in writing.
Proposal for a regulation
Article 7 – paragraph 4

Text proposed by the Commission

4. The timeframes for consulting the public concerned on the environmental report referred to in Article 5(1) of Directive 2011/92/EU shall not be longer than 45 days. In cases falling under the second sub-paragraph of Article 6(4), this period shall be extended to 90 days.

Amendment

4. The timeframes for consulting the public concerned on the environmental report referred to in Article 5(1) of Directive 2011/92/EU shall not be longer than 80 days but not shorter than 40 days. In cases falling under the second sub-paragraph of Article 6(4), this period can be extended to a maximum of 90 days on a case-by-case basis. In that event, the national competent authority shall inform the project promoter of the reasons justifying the extension. Public consultation shall begin as soon as the file submitted by the project promoter is deemed to be complete by the competent administrative authority and be conducted in parallel to the assessment of the project request by the national competent authority, while complying with the requirements on consulting the public concerned set out in Directive 2011/92/EU and making the results of the public consultation available to the competent authority.

Amendment

Priority status of net-zero strategic projects

1. Project promoters and all authorities that, under national law, are competent to issue various permits and authorisations related to the planning, design and construction of immovable assets, including energy infrastructure, shall ensure that for net-zero strategic projects those processes are treated in the most rapid way possible in accordance with Union and national law.

Priority status of net-zero strategic projects

1. Project promoters and all authorities that, under national law, are competent to issue various permits and authorisations related to the planning, design and construction of immovable assets, including energy infrastructure, shall ensure that for net-zero strategic projects those processes are treated in the most rapid way possible in accordance with Union and national law.
2. Without prejudice to obligations provided for in Union law, Member States shall grant net-zero strategic projects the status of the highest national significance possible, where such a status exists in national law, and be treated accordingly in the permit-granting processes including those relating to environmental assessments and if national law so provides, to spatial planning.

3. Net-zero strategic projects shall be considered to contribute to the security of supply of strategic net-zero technologies in the Union and therefore to be in the public interest. With regard to the environmental impacts addressed in Articles 6(4) and 16(1)(a) of Directive 92/43/EEC, Article 4(7) of Directive 2000/60/EC and Article 9(1)(a) of Directive 2009/147/EC, net-zero strategic projects in the Union shall be considered as being of public interest and may be considered as having an overriding public interest provided that all the conditions set out in those Directives are fulfilled.

4. All dispute resolution procedures, litigation, appeals and judicial remedies related to net-zero strategic projects in front of any national courts, tribunals, panels, including mediation or arbitration, where they exist in national law, shall be treated as urgent, if and to the extent to which national law provides for such urgency procedures and provided that the normally applicable rights of defence of individuals or of local communities would be respected Project promoters of net-zero strategic projects shall participate in such urgency procedure, where applicable.

Proposal for a regulation
Article 13 – paragraph 4
4. National competent authorities shall ensure that the lack of reply of the relevant administrative bodies within the applicable time limits referred to in this Article results in the specific intermediary steps to be considered as approved, except where the specific project is subject to an environmental impact assessment pursuant to Council Directive 92/43/EEC or Directive 2000/60/EC, Directive 2008/98/EC, Directive 2009/147/EC, Directive 2010/75/EU, 2011/92/EU or Directive 2012/18/EU or a determination of whether such environmental impact assessment is necessary and the relevant assessments concerned have not yet been carried out, or where the principle of administrative tacit approval does not exist in the national legal system. Where the lack of reply of the relevant administrative bodies occurs frequently, Member States shall ensure that the bodies are adequately resourced to respond within the applicable time limits to future requests. This provision shall not apply to final decisions on the outcome of the process, which are to be explicit. All decisions shall be made publicly available.

Proposal for a regulation
Article 15 a (new)

Text proposed by the Commission

Article 15a

Financing of net-zero technologies

Without prejudice to the relevant provisions of Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 (ETS Directive), Member States shall report annually on the percentage of national revenues generated from the auctioning of the allowances pursuant to Article 10(3) of
Directive 2003/87/EC that is used to support the objectives of this Regulation with regard to the strategic net-zero technologies listed in Annex I of this Regulation, with a view of reaching at least 25%.

Compromise Amendment 7 - Article 16, Article 17
EPP, S&D, Renew, Greens/EFA, The Left

Compromise amendment replacing Amendments: 508-560

Proposal for a regulation
Article 16 – paragraph 1

Text proposed by the Commission

An annual injection capacity of at least 50 million tonnes of CO₂ shall be achieved by 2030, in storage sites located in the territory of the European Union, its exclusive economic zones or on its continental shelf within the meaning of the United Nations Convention on the Law of the Sea (UNCLOS) and which are not combined with Enhanced Hydrocarbon Recovery (EHR).

Amendment

An annual injection capacity with a provisional target of at least 60 million tonnes of CO₂, with priority access for unavoidable industrial process emissions, shall be achieved by 2030 in storage sites, meaning geological storage sites permitted under Directive 2009/31/EC, including depleted oil and gas fields and saline aquifers, located in the territory of the European Union, the EEA, or its exclusive economic zones or on its continental shelf within the meaning of the United Nations Convention on the Law of the Sea (UNCLOS) and which are not combined with Enhanced Hydrocarbon Recovery (EHR). The provisional target shall be subject to adaptation and become binding in accordance with the results of the adequacy assessment set out in Article 17, paragraph 2a of this Regulation;

Proposal for a regulation
Article 16 – paragraph 1 a (new)
The Commission shall present a report, accompanied by a legislative proposal if appropriate, to establish a new annual CO₂ injection capacity to be achieved between 2030 and 2040 by [3 years following the entry into force of the Regulation] on the basis of the data received under Article 17 and 18.

Proposal for a regulation
Article 17 – paragraph 1 – point a

(a) make publicly available data on areas where CO₂ storage sites can be permitted on their territory.

Proposal for a regulation
Article 17 – paragraph 1 – point b

(b) oblige entities holding an authorisation as defined in Article 1, point 3, of Directive 94/22/EC of the European Parliament and of the Council⁷¹ on their territory to make publicly available all geological data relating to production sites that have been decommissioned or whose decommissioning has been notified to the competent authority, and preliminary economic assessments of the respective costs of enabling CO₂ injection on each site, including data on:

Proposal for a regulation
Article 17 – paragraph 2 a (new)

Text proposed by the Commission

Amendment

2a. By 12 months from the entry into force of this Regulation and every 12 months thereafter, the Commission shall publish a CO2 storage and injection capacity adequacy assessment, using notably the information collected pursuant to Article 17(2) and to Article 18 (6).

This adequacy assessment shall:

(a) provide a detailed analysis of the geographical and temporal adequacies between the existing and planned CO2 storage sites and the CO2 capture projects for CO2 emissions from industrial installations within the Union;

(b) identify the main infrastructure needed for the transportation and storage of CO2 emissions from industrial installations, in the most environmentally and socially responsible as well as the most cost-efficient manner, throughout the Union;

(c) adapt the provisional target of necessary CO2 injection capacity to be developed in the Union and set a binding target to enable the permanent storage of CO2 emissions from industrial installations by 2030.

Compromise amendment replacing Amendments: 561-623, 693-716, 724

Proposal for a regulation
Article 18 – title

Text proposed by the Commission

Contribution of *authorised oil and gas producers*

Amendment

Contribution of *economic operators offering petroleum products, natural gas or coal on the Union market*

Or. en

Proposal for a regulation
Article 18 – paragraph 1

Text proposed by the Commission

1. Each *entity holding an authorisation as defined in Article 1, point 3, of Directive 94/22/EC* shall be subject to an individual contribution to the Union-wide target for available CO₂ injection capacity set in Article 16. Those individual contributions shall be calculated pro-rata on the basis of each entity’s share in the Union’s *crude oil and natural gas production* from 1 January 2020 to 31 December 2023 and shall consist of CO₂ injection capacity in a storage site permitted in accordance with Directive 2009/31/EC on the geological storage of carbon dioxide and available to the market by 2030.

Amendment

1. Each *economic operator offering petroleum products, natural gas or coal on the Union market* shall be subject to an individual contribution to the Union-wide target for available CO₂ injection capacity set in Article 16. Those individual contributions shall be calculated pro-rata on the basis of each entity’s share in the Union’s *greenhouse gas emissions stemming from the combustion of the volumes of fossil fuels products offered on the Union market* from 1 January 2020 to 31 December 2023 and shall consist of CO₂ injection capacity in a storage site permitted in accordance with Directive 2009/31/EC on the geological storage of carbon dioxide and available to the market by 2030.

Amendment

Article 18a

Regulatory framework for the market for CO2 storage and transport

Within 1 year of the entry into force of this Regulation, the Commission shall adopt a legislative proposal, following the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making and including an impact assessment, to establish a regulatory framework for a Union-wide CO2 capture, storage and transport market to complement the rules set out in Directive 2009/31/EC, laying down rules on:

(a) open, fair and non-discriminatory access and safety of the CO2 storage and transport network;

(b) the functioning and interconnection of the CO2 transport network and other infrastructure across the Union;

(c) economic incentives, funding and financial assistance mechanisms;

(d) specification standards for CO2 storage and transport;

(e) environmental standards;

(f) enforcement mechanisms.
Article 30 – paragraph 1

Text proposed by the Commission

Member States shall take into consideration this Regulation when preparing their national energy and climate plans and their updates, submitted pursuant to Articles 3, 9, and 14 of Regulation (EU) 2018/1999, in particular as regards the dimension “research, innovation and competitiveness” of the Energy Union, and in the submission of their biennial progress reports in accordance with Article 17 of that Regulation.

Amendment

Member States shall take into consideration this Regulation when preparing their national energy and climate plans and their updates, submitted pursuant to Articles 3, 9, and 14 of Regulation (EU) 2018/1999 and shall include a detailed analysis of their progress towards the objectives in Article 1 of this Regulation and future measures to achieve these objectives, including through cross-border cooperation, in particular as regards the dimension “research, innovation and competitiveness” of the Energy Union, and in the submission of their biennial progress reports in accordance with Article 17 of that Regulation. In particular, Member States shall identify measures to promote research, development and innovation in order to:

(a) minimise and counterbalance unavoidable CO2 emissions from energy-intensive sectors;

(b) improve environmental sustainability and circularity features of manufacturing capacities of strategic net-zero technologies, in particular with regard to the reuse, recycling and resource-efficiency considerations;

(c) improve the performance of those technologies compared to the state-of-the-art in the Union in order to maintain global leadership.

Compromise Amendment 10 - Recitals
EPP, S&D, Renew, Greens/EFA, The Left

Proposal for a regulation
Recital 6

(6) The net-zero transformation is already causing huge industrial, economic, and geopolitical shifts across the globe, which will become ever more pronounced as the world advances in its decarbonisation efforts. The road to net zero translates into strong opportunities for the expansion of Union’s net-zero industry, making use of the strength of the Single Market, by promoting investment in technologies in the field of renewable energy technologies, electricity and heat storage technologies, heat pumps, grid technologies, renewable fuels of non-biological origin technologies, electrolysers and fuel cells, clean energy based on innovative water technologies including tidal wave and...
storage technologies, and energy-system related energy efficiency technologies and their supply chains, allowing for the decarbonisation of our economic sectors, from energy supply to transport, buildings, and industry. A strong net zero industry within the European Union can help significantly in reaching the Union’s climate and energy targets effectively, as well as in supporting other Green Deal objectives, while creating jobs and growth.

Proposal for a regulation
Recital 10

Text proposed by the Commission

(10) To achieve the 2030 objectives a particular focus is needed on some of the net-zero technologies, also in view their significant contribution towards the path to net zero by 2050. These technologies include solar photovoltaic and solar thermal technologies, onshore and offshore renewable technologies, battery/storage technologies, heat pumps and geothermal energy technologies, electrolysers and fuel cells, sustainable biogas/biomethane, carbon capture and storage technologies and grid technologies. These technologies play a key role in the Union’s open strategic autonomy, ensuring that citizens have access to clean, affordable, secure energy. Given their role, these technologies should benefit from even faster permitting procedures, obtain the status of the highest national significance possible under national law and benefit from additional support to crowd-in investments.

Amendment

(10) To achieve the 2030 objectives a particular focus is needed on some of the net-zero technologies, also in view their significant contribution towards the path to net zero by 2050. These technologies include, inter alia, solar photovoltaic and solar thermal technologies, onshore and offshore renewable technologies, battery/storage technologies, heat pumps and geothermal energy technologies, electrolysers and fuel cells, sustainable biogas/biomethane, carbon capture and storage technologies and clean energy based on innovative water technologies including tidal wave technologies including tidal wave and osmosis power technologies. These technologies, including specific components and specific machinery primarily used for their production, play a key role in the Union’s open strategic autonomy, ensuring that citizens have access to clean, affordable, secure energy. Given their role, these technologies should benefit from even faster permitting procedures, obtain the status of the highest national significance possible under national law and benefit from additional support to crowd-in investments.
Proposal for a regulation
Recital 13

(13) The development of carbon capture and storage solutions for industry is confronted with a coordination failure. On the one hand, despite the growing CO₂ price incentive provided by the EU Emissions Trading System, for industry to invest into capturing CO₂ emissions making such investments economically viable, they face a significant risk of not being able to access a permitted geological storage site. On the other hand, investors into first CO₂ storage sites face upfront costs to identify develop and appraise them even before they can apply for a regulatory storage permit. Transparency about potential CO₂ storage capacity in terms of the geological suitability of relevant areas and existing geological data, in particular from the exploration of hydrocarbon production sites, can support market operators to plan their investments. Member State should make such data publicly available and report regularly in a forward-looking perspective about progress in developing CO₂ storage sites and the corresponding needs for injection and storage capacities above, in order to collectively reach the Union-wide target for CO₂ injection capacity.

Proposal for a regulation
Recital 13 a (new)

(13a) Additional policy effort is essential to secure the deployment of cross-border infrastructure planning. Accessibility and connectivity of the full range of carbon dioxide (CO₂) transportation modalities to ensure that injection capacity will deliver the expected CO₂ removals and to avoid stranded assets, CCS value chains including capture-transport and storage need to be established by 2030.
plays a critical role for the deployment of CCS and CCU projects. Modalities cover ship, barge, train and truck as well as fixed facilities for connecting and docking, for liquefaction, buffer storage and converters of CO₂ in view of its further transportation through pipelines and in dedicated modes of transport. To reach the Union’s target of 60 million tonnes of annual operational CO₂ injection capacity by 2030, the Commission should develop a CO₂ infrastructure plan with actions towards creating a regulatory and financial framework to establish a unified CCS market in the EU.

Proposal for a regulation
Recital 14

Text proposed by the Commission

(14) A key bottleneck for carbon capture investments that are today increasingly economically viable is the availability of operating CO₂ storage sites in Europe, which underpin the incentives from Directive 2003/87/EC. To scale up the technology and expand its leading manufacturing capacities, the EU needs to develop a forward-looking supply of permanent geological CO₂ storage sites permitted in accordance with Directive 2009/31/EU. By defining a Union target of 50 million tonnes of annual operational CO₂ injection capacity by 2030, in line with the expected capacities needed in 2030, the relevant sectors can coordinate their investments towards a European Net-Zero CO₂ transport and storage value chain that industries can use to decarbonise their operations. This initial deployment will also support further CO₂ storage in a 2050 perspective. According to the Commission’s estimates, the Union could need to capture up to 550 million tonnes of CO₂ annually by 2050 to meet the net zero objective, including for carbon removals. Such a first industrial-scale storage capacity will de-risk investments into the

Amendment

(14) A key bottleneck for carbon capture investments that are today increasingly economically viable is the availability of operating CO₂ storage sites in Europe, which underpin the incentives from Directive 2003/87/EC. To scale up the technology and expand its leading manufacturing capacities, the EU needs to develop a forward-looking supply of permanent geological CO₂ storage sites permitted in accordance with Directive 2009/31/EU, which prioritises the storage of unavoidable industrial process emissions from large-scale industrial installations. By defining a provisional Union target of 60 million tonnes of annual operational CO₂ injection capacity by 2030, in line with the expected capacities needed in 2030, the relevant sectors can coordinate their investments towards a European Net-Zero CO₂ transport and storage value chain that industries can use to decarbonise their operations. This initial deployment will also support further CO₂ storage in a 2050 perspective. In order to keep the Union target in line with actually available storage capacities and demand, the Commission shall adapt this target.
capturing of CO₂ emissions as important tool to reach climate neutrality. When this regulation is incorporated into the EEA Agreement, the Union target of 50 million tonnes of annual operational CO₂ injection capacity by 2030 will be adjusted accordingly.

pursuant to an adequacy assessment taking into account the data collected for the purposes of this Regulation.

According to the Commission’s estimates, the Union could need to capture up to 550 million tonnes of CO₂ annually by 2050 to meet the net zero objective³⁷, including for carbon removals. Such a first industrial-scale storage capacity will de-risk investments into the capturing of CO₂ emissions as important tool to reach climate neutrality. When this regulation is incorporated into the EEA Agreement or other agreements between the Union and third countries on the storage of CO₂ are ratified, the adequacy assessment and corresponding CO₂ injection capacity will be adjusted accordingly.

Proposal for a regulation
Recital 15

Text proposed by the Commission

(15) By defining CO₂ storage sites that contribute to the Union’s 2030 target as net-zero strategic projects, the development of CO₂ storage sites can be accelerated and facilitated, and the increasing industrial demand for storage sites can be channelled.

Amendment

(15) By defining CO₂ storage sites that contribute to the Union’s 2030 target as net-zero strategic projects, the development of CO₂ storage sites can be accelerated and facilitated, and the increasing industrial demand for storage sites can be channelled.
towards the most-cost-effective storage sites. An increasing volume of depleting gas and oil fields that could be converted in safe CO$_2$ storage sites are at the end of their useful production lifetime. In addition, the oil and gas industry has affirmed its determination to embark on an energy transition and possesses the assets, skills and knowledge needed to explore and develop additional storage sites. To reach the Union’s target of 50 million tonnes of annual operational CO$_2$ injection capacity by 2030, the sector needs to pool its contributions to ensure that carbon capture and storage as a climate solution is available ahead of demand. In order to ensure a timely, Union-wide and cost-effective development of CO$_2$ storage sites in line with the EU objective for injection capacity, licensees of oil and gas production in the EU should contribute to this target pro rata of their oil and gas manufacturing capacity, while providing flexibilities to cooperate and take into account other contributions of third parties.

Proposal for a regulation
Recital 18

Text proposed by the Commission

(18) Considering these objectives together, while also taking into account that for certain elements of the supply chain (such as inverters, as well as solar cells, wafers, and ingots for solar PV or cathodes and anodes for batteries) the Union manufacturing capacity is low, the Union net-zero technologies annual capacity should aim at approaching or reaching an overall annual manufacturing benchmark of at least 40% of annual

Amendment

(18) Considering these objectives together, while also taking into account that for certain elements of the supply chain (such as inverters, as well as solar cells, wafers, and ingots for solar PV or cathodes and anodes for batteries) the Union manufacturing capacity is low, the Union net-zero technologies annual capacity should aim at approaching or reaching an overall annual manufacturing benchmark of at least 40% of annual
deployment needs by 2030 for the technologies listed in the Annex. However,
some technologies have already reached a significant level of manufacturing
capacity. For those technologies, a higher benchmark should be set, in relation to
the existing capacity.

Proposal for a regulation
Recital 43 a (new)

Text proposed by the Commission

Amendment

(43a) With the increase of EU ETS prices, revenues from the EU ETS for Member States have increased substantially. To promote the decarbonisation of Union industry, Member States should significantly increase their allocation of national revenues stemming from the EU ETS to support the decarbonisation of industry and should therefore aim to allocate at least 25% of their national revenues stemming from the Emission Trading System to support the objectives of this Act.
