Size of the player

The width (560) and height (315) are just examples, you can adjust them as you see fit. They correspond with the “**width**” and “**height**” parameters in the URL, so change those accordingly. Example calculation of width and height of the embedding frame: If width = 640px, then for a video aspect ratio of 16/9 (=1.777), you can do this: $640/1.777 = 360$.
