Santrauka During the February II plenary session, Parliament is set to vote on a provisional agreement reached between the European Parliament and the Council on the proposed regulation on data collection and sharing relating to short-term accommodation rental services. The proposal aims to facilitate registration of hosts and their short-term rental units (such as houses, apartments and rooms). It also aims to reduce inconsistencies in how online platforms share data with public authorities, and help to increase consumer confidence in these services.

Santrauka Platform work has rapidly developed since it first emerged in the EU, though concerns have been raised about the employment and working conditions of platform work and the risk of precariousness it entails. Platform work has, therefore, been identified as a policy priority by European policy-makers.

This study presents an analytical literature review that focuses on the challenges and risks of precariousness of platform work and explores possible pathways for EU action. It covers aspects of the COVID-19 pandemic. The analysis was prepared at the request of the Committee on Employment and Social Affairs of the European Parliament.

Politikos sritis Transportas

Raktinis žodis APLINKA | aplinkos blogėjimas | aplinkos politika | automobilių tarša | bendroji transporto politika | dalijimosi ekonomika | darnus judumas | EKONOMIKA | ekonominė struktūra | išmetamųjų dujų kiekių mažinimas | klimato kaita | poveikis aplinkai | TRANSPORTAS | transporto politika | žalioji ekonomika

Santrauka Transport is a strategic sector of the EU economy. Essential to ensuring free movement, it enables people and goods to overcome distances, borders and natural barriers, directly affecting the everyday lives of all EU citizens. Maintaining the flow of goods from producers and manufacturers to consumers makes efficient transport systems a backbone of European integration. For the single market to function well in all regions, the EU needs sustainable, efficient and fully interconnected transport networks. As the demand for transport services grows, reducing transport emissions and negative impacts on human health and the environment has become one of the main challenges. New technologies, such as digitalisation, and connected and automated mobility, open new possibilities to improve transport safety, security and efficiency, and to reduce emissions, but also transform the employment in the sector in terms of working conditions and required skills. Collaborative economy developments, such as car-sharing and bike-sharing services are changing user behaviour and mobility patterns. EU transport policy needs to help the sector cut emissions drastically by running on less and cleaner energy, utilise modern infrastructure, and reduce its impact on the environment. The new President of the European Commission, Ursula von der Leyen, has put transport on a fast track towards becoming decarbonised and digital. This transformation is to be a key part of her European Green Deal and 'making Europe fit for the digital age' priorities. In 2020, the Commission will propose a 'climate law', committing the EU to becoming climate neutral by 2050. The European Council has endorsed this objective and Parliament had already called for ambitious goals and a corresponding long-term EU budget. While concrete steps towards this ambitious goal remain to be defined, it will require a step change to make transport modern, sustainable and decarbonised.

Politikos sritis Mokslinių tyrimų politika | Transportas

Raktinis žodis Bendroji mokslinių tyrimų ir eksperimentinės plėtros programa | dalijimosi ekonomika | dirbtinis intelektas | EKONOMIKA | ekonominė struktūra | GAMYBA, TECHNOLOGIJOS IR MOKSLINIAI TYRIMAI | geležinkelio transportas | informacija ir informacijos apdorojimas | informacijos technologija ir duomenų apdorojimas | intelektinė transporto sistema | jūrų ir vidaus vandens kelių transportas | jūrų laivyba | kelių transportas | moksliniai tyrimai ir eksperimentinė plėtra | moksliniai tyrimai ir intelektinė nuosavybė | oro ir kosminis transportas | oro transportas | robotika | sausumos transportas | TRANSPORTAS | transporto politika | transporto sauga | transporto struktūra | vidaus laivyba | ŠVIETIMAS IR RYŠIAI

Santrauka Artificial intelligence is changing the transport sector. From helping cars, trains, ships and aeroplanes to function autonomously, to making traffic flows smoother, it is already applied in numerous transport fields. Beyond making our lives easier, it can help to make all transport modes safer, cleaner, smarter and more efficient. Artificial intelligence-led autonomous transport could for instance help to reduce the human errors that are involved in many traffic accidents. However, with these opportunities come real challenges, including unintended consequences and misuse such as cyber-attacks and biased decisions about transport. There are also ramifications for employment, and ethical questions regarding liability for the decisions taken by artificial intelligence in the place of humans. The EU is taking steps to adapt its regulatory framework to these developments, so that it supports innovation while at the same time ensuring respect for fundamental values and rights. The measures already taken include general strategies on artificial intelligence and rules that support the technologies enabling the application of artificial intelligence in transport. In addition, the EU provides financial support, in particular for research.

Santrauka Cooperatives are autonomous associations of people aspiring to achieve their objectives through a jointly owned and democratically controlled enterprise. International organisations, such as the United Nations and the European Union (EU), value the role cooperatives play for society, the economy and (international) development. There are 3 million cooperatives worldwide; together, they provide employment for 280 million people, equating to 10 % of the world's employed population. The 300 largest cooperatives and mutuals in the world had a total turnover of US\$2.018 trillion in 2016. In the EU there are some 131 000 cooperatives, with more than 4.3 million employees and an annual turnover of €992 billion. While cooperatives have grown in importance for the (social) economy over the past four decades, they face both long-standing and new challenges, resulting from globalisation or the presence of myriad national laws, but also from organisational and governance issues. Cooperatives have become more product-based and less region-based (in terms of member representation). In addition, cross-border-oriented cooperatives and producer organisations often experience legal uncertainty because of the absence or inconsistent application of international legislation. Policy- and law-makers are currently discussing a number of initiatives aimed at creating a level playing field for cooperatives, both in the EU and globally, that would allow them to compete with investor-oriented firms without giving up their social and cultural orientation. An enabling European legal framework could provide transversal recognition of the cooperative business model across the different sectors of the economy. While small and emerging cooperatives need more targeted funding, and assistance with capacity-building and organisational aspects, larger cooperatives require more EU and national-level support in order to achieve their aims in terms of professionalisation.

Santrauka Globalisation, technological change, an aging population and changes to the world of work have made securing social protection for all, i.e. economic and social security, a major challenge. When social protection systems work well, they can have a stabilising effect on the economy and promote socio-economic equality and stability. By contrast, inadequate or ineffective systems can exacerbate inequality. Indeed, improving the existing social protection systems is the priority of half of the principles of the European Pillar of Social Rights – the European Commission's overarching social field initiative designed to serve as a compass for policies updating current labour market and welfare systems. While implementation of the 'social pillar' remains primarily the responsibility of the Member States, in close cooperation with the social partners, the European Commission has put forward several legislative and non-legislative initiatives to support this process in the area of social protection. These include the proposal for a recommendation on social protection for all, including non-standard workers, responding to calls from the European Parliament and the social partners and stakeholders. This proposal had the difficult task of addressing all the disagreements that had arisen during the two-phase consultation in the preparatory phase. While all parties seem to agree on the importance of adjusting social protection to the new realities of life and work, there are differences of opinion concerning the technicalities, such as the financing of schemes. This is in part a reflection of the current evidence that raises many questions as to the optimal response to the new challenges in very diverse systems of social protection across the Member States. The main trends currently include a combination of social protection and social investment, individualisation of social protection schemes and a potential move towards universal social protection, whereby social protection would be removed from the employment relationship. However, financing these schemes poses a challenge.

Santrauka EU citizens' daily lives have been changed by the emerging collaborative economy. However, the terms employed to describe the phenomenon are as many and varied as the interpretations of what the collaborative economy actually comprises. The collaborative economy encompasses many situations that do not match the standard business categories and types of transactions. The collaborative economy blurs the lines, not least as regards taxation. For policy-makers to understand how taxation of the collaborative economy can be put into practice requires fighting the surrounding fog of terms and categories. Privileging a case-by-base and tax-by-tax, rather than a straightforward 'one-size-fits-all' approach, is a prerequisite for grasping the potential benefits of this fast-evolving and multifaceted reality.

Santrauka The digital revolution is reshaping the world, changing people's habits in communication, work, leisure and politics. A major part of this revolution is the expansion of the economy based on digital platforms that match demand and supply for labour without an intermediation of traditional corporations. Platforms also allow people to socialise regardless of geographic distance, find entertainment and travel opportunities easily, and do many other things. Some well-known platforms are Google, Twitter, LinkedIn, Apple, Amazon, Uber and AirBnB. While offering vast opportunities to the economy, platforms are also posing tough challenges, for example, in fostering often-precarious, project-based forms of employment at the expense of stable contracts with social security protection, or putting pressure on traditional news media. This note brings together commentaries and studies by international think tanks and research institutes on the role of digital platforms, notably in labour markets, and related issues.

Santrauka This paper examines the development of digital business models in the provision of flights and short-term accommodation services. It discusses the growing importance of digital intermediaries and their associated business model features, some of which provide significant value, and others which could be considered deleterious and in need of regulatory scrutiny. The paper concludes with some suggestions for regulation based on technology, algorithms and big data analytics. This could enable a more soft-touch, automatic, dynamic and individualised approach to regulation. This research paper has been commissioned by Policy Department at the request of the Internal Market and Consumer Protection Committee.

Santrauka This study investigates the social protection of workers in the platform economy at the request of the European Parliament's Employment and Social Affairs Committee. The report reviews literature and previous research on the platform economy with the aims of defining it and developing a typology for understanding its nature. It discusses the growth and drivers of the platform economy, as well as benefits and challenges for workers, reporting findings from 50 interviews conducted with expert stakeholders in eight European countries and from an original survey of 1,200 platform workers. It dissects the different normative layers that need to be considered when looking at the challenges of social protection of platform workers from a legal perspective. Finally, the report draws conclusions and makes recommendations concerning arrangements for the provision of social protection for workers in this growing sector of the economy.

[Understanding non-tariff barriers in the single market](#)

Publikacijos rūšis Briefing

Data 09-10-2017

Autorius SZCZEPANSKI Marcin

Politikos sritis Ekonomikos ir pinigų klausimai | Vidaus rinka ir muitų sajunga

Raktinis žodis bendoji rinka | bendoji skaitmeninė rinka | dalijimosi ekonomika | EKONOMIKA | ekonominė struktūra | europinė struktūra | EUROPOS SĄJUNGA | Europos Sajungos teisė | FINANSAI | GAMYBA, TECHNOLOGIJOS IR MOKSLINIAI TYRIMAI | mokesčiai | netarifinė kliūtis | pasiūlymo pateikimas | PREKYBA | prekybos politika | PVM | standartizacija | tarptautinė prekyba | tarpusavio pripažinimo principas | technologijos ir techniniai reglamentai | viešojo pirkimo–pardavimo sutartis

Santrauka Despite the achievements of single market integration, many non-tariff barriers (NTBs) persist, preventing realisation of its full economic potential. These arise from laws, technical regulations and practices, and create obstacles for trade. NTBs can be of a general character, such as problems with the implementation and enforcement of EU law at the national level, missing or differing e-government solutions, or complex VAT requirements in intra-EU trade. NTBs can also be sector-specific and concern only specific markets for goods, services or retail. Accordingly, the EU is tackling NTBs with a mix of general and sectoral initiatives, often cutting across various policy areas. The Juncker Commission, now at the mid-term of its mandate, made deepening the single market one of its main priorities. The Commission's single market and digital single market strategies address many NTBs. However, greater Member State involvement, stronger monitoring, and increased political emphasis on the single market are likely to be needed to remove the barriers and deepen single market integration. NTBs are also increasingly mentioned in the context of debates on the United Kingdom's withdrawal from the European Union. The impacts of Brexit on the single market and NTBs are as yet unclear, but early analysis points to the likelihood of legal uncertainty and the need to address a multitude of often challenging issues.

Išorės autorius Matthias FINGER, Juan José Montero, Nadia BERT, David KUPFER, Marcin WOLEK

Politikos sritis Transportas

Raktinis žodis bendoji transporto politika | dalijimosi ekonomika | EKONOMIKA | ekonominis padarinys | ekonominė analizė | ekonominė struktūra | FINANSAI | finansavimas ir investavimas | finansavimo metodas | informacijos technologija ir duomenų apdorojimas | informaciinių technologijų poveikis | miesto transportas | poveikio tyrimas | PREKYBA | TRANSPORTAS | transporto ekonomika | transporto infrastruktūra | transporto politika | transporto struktūra | vartojimas | viešasis transportas | visuotinės svarbos paslaugos | ŠVIETIMAS IR RYŠIAI

Santrauka The study analyses the disruption created by shared mobility in the funding of transport infrastructure. While recognizing the benefits of shared mobility in terms of reduction of private car use, the study identifies that there might be short term negative effects on the revenues of long distance railway and coach operators. It also points out other potential risks, which include capture of value by commissions charged by platforms mediating mass-transit services (Mobility as a Service), freeriding and lower tax contributions. The study makes recommendations to reduce these risks.

Politikos sritis Užimtumas

Raktinis žodis dalijimosi ekonomika | darbo aplinka | darbo organizavimas ir darbo sąlygos | darbo rinka | darbo vietų kūrimas | EBPO | EKONOMIKA | ekonominė analizė | ekonominė struktūra | ES statistika | GAMYBA, TECHNOLOGIJOS IR MOKSLINIAI TYRIMAI | informacijos technologija ir duomenų apdorojimas | informacinių technologijų poveikis | nauja užimtumo forma | profesinės judumas | robotizavimas | SOCIALINIAI KLAUSIMAI | socialinis poveikis | socialinė apsauga | socialinė apsauga | socialinė sistema | TARPTAUTINĖS ORGANIZACIJOS | tarpvalstybinės organizacijos | technologijos ir techniniai reglamentai | technologinis pakeitimas | užimtumas | UŽIMTUMAS IR DARBO SĄLYGOS | užimtumo statistika | ŠVIETIMAS IR RYŠIAI

Santrauka Economic and technical changes are redrawing the map of the world of work: new jobs are appearing while others are becoming obsolete, and atypical work patterns are replacing full-time work and open-ended contracts. In addition, work is increasingly being carried out on online platforms connecting buyers and sellers, or by large project teams across borders and time zones. Robotics and digitalisation raise new questions, as machines are progressively replacing the human workforce for routine tasks, and as new types of professional and personal skills are required to respond to technological progress. Active labour-market policies are needed to cater for the changing reality in the world of work. This concerns social security systems, which must adapt to new, constantly changing, requirements, unresolved ethical and practical problems relating to robotics, and the need for new digital skills, which are essential to survive in the new working environment.

Fostering social innovation in the European Union

Publikacijos rūšis Briefing

Data 17-01-2017

Autorius MILOTAY Nora

Politikos sritis Energetika | Socialinė politika | Užimtumas | Vidaus rinka ir muitų sajunga | Švietimas

Raktinis žodis dalijimosi ekonomika | EKONOMIKA | ekonominė struktūra | ES politika | europinė struktūra | EUROPOS SAJUNGA | Europos Sajungos finansai | fondai (ES) | GAMYBA, TECHNOLOGIJOS IR MOKSLINIAI TYRIMAI | inovacija | moksliniai tyrimai ir intelektinė nuosavybė | POLITIKA | SOCIALINIAI KLAUSIMAI | socialinis poveikis | socialinė ekonomika | socialinė sistema | valdžia | vykdomoji valdžia ir valstybės tarnyba

Santrauka Strengthening the social dimensions of European Union policies, in general, and of the economic and monetary union, in particular is an increasingly important discourse across the Member States, particularly since the 2008 financial crisis. Social innovation, which is gaining increasing importance in the public, private and third (i.e. voluntary, non-profit) sectors, can greatly contribute to addressing the growing challenges, such as migration, poverty and global warming. The European Union particularly promotes social innovation through employment and social policies as well as policies on the single market. The main initiatives explicitly target the governance and funding mechanism of social innovation, including its regulatory environment, powering public-sector innovation, the social economy, as well as providing policy guidance and fostering new policy practices. Due to the complexity of the concept and ecosystem of social innovation and its very diverse contexts in the Member States, European Union policies have varied impact: regulations can have controversial effects in terms of visibility of initiatives, and many organisations still cannot access sufficient funding. To make these initiatives more effective it is important to know more about the impact of social innovation, including its social and environmental value and the importance of these for the economy. Santrauka The projected growth in demand for transport will magnify the challenges – such as congestion, decarbonisation and the digital transition – faced by the EU transport sector. Small and medium-sized enterprises (SMEs) in this sector are confronted by these evolving trends but can also play a vital role in addressing them and building new business opportunities. The EP's Committee on Transport and Tourism has adopted an own-initiative report on new opportunities for small transport businesses, including collaborative business models, to be debated during the November plenary session.

Santrauka The collaborative economy (or “platform economy”), encompassing work-on-demand via apps like Uber and crowdwork like Amazon Mechanical Turk, has grown exponentially in recent years, thanks to the development of high-speed networks, the exploitation of big data and the availability of mobile devices, which have cut down transaction costs and allow for real-time effective matching of supply and demand.

While creating many new opportunities for digital and physical services, which have, thanks to lower costs as compared to established operators, rather expanded the market for services instead of crowding out the incumbents, this new digitally based economy has also raised questions on the situation of workers. As this literature review shows, their legal status (either as employees or self-employed) is often unclear, and negative effects on the labour market can be witnessed (such as missing social protection, low remuneration of work, questionable work-life balance and more). Many of these effects are due to the functioning of the digital economy, which relies on micro-tasks, trust-inducing mechanisms as ratings and - at times opaque - algorithms.

The literature review also presents policy solutions as discussed in recent literature.
