[Ecodesign for sustainable products](#)

Typ publikácie Briefing

Dátum 07-02-2024

Autor RAGONNAUD Guillaume

Oblast' politiky Ochrana spotrebiteľa | Vnútorný trh a colná únia

Kľúčové slovo budovanie Európy | ekodizajn | ekologická politika | ekologický dosah | EKONOMIKA | energetická efektívnosť | energetická politika | ENERGIA | EURÓPSKA ÚNIA | hospodárska politika | návrh (EU) | OBCHOD | obehové hospodárstvo | právo Európskej únie | recyklácia odpadu | spotreba | technológia a technické predpisy | udržateľný výrobok | vnútorný trh | výroba | VÝROBA, TECHNOLÓGIA A VÝSKUM | údržba | životnosť výrobku | ŽIVOTNÉ PROSTREDIE

Zhrnutie Most products are not designed with their life cycle environmental impacts in mind, and it is difficult for consumers and economic operators to make sustainable choices when buying products. The EU still lacks an overarching legislative framework laying down rules for sustainable production and consumption of all products. Ecodesign refers to the integration of environmental sustainability considerations into the characteristics of a product, and into processes throughout its value chain. On 30 March 2022, the European Commission put forward a proposal for a regulation establishing a framework for setting ecodesign requirements for sustainable products. The proposed regulation would lay down rules applying to all products on the internal market, with the aim of making them more durable, reusable, repairable, upgradable, recyclable and generally less harmful to the environment. The regulation would include rules on a digital product passport, green public procurement and a ban on the destruction of unsold goods. The co-legislators reached a provisional agreement on 5 December 2023, after three trilogues. This agreement still needs to be formally approved by both institutions. It was approved by Coreper on 22 December 2023, and by the Committee on the Environment, Public Health and Food Safety (ENVI) on 11 January 2024. It must now be adopted by Parliament in plenary and then by the Council. Third edition of a briefing originally drafted (first version) by Nikolina Šajn. The 'EU Legislation in Progress' briefings are updated at key stages throughout the legislative procedure.

[Waste framework directive: A more sustainable use of natural resources](#)

Typ publikácie Briefing

Dátum 13-12-2023

Autor KATSAROVA Ivana

Oblast' politiky Bezpečnosť potravín

Kľúčové slovo boj proti plynaniu | ekologická politika | EKONOMIKA | EURÓPSKA ÚNIA | hospodárska politika | koziarsky a textilný priemysel | návrh (EU) | obehové hospodárstvo | obuvnícky priemysel | ochrana životného prostredia | plynanie potravinami | poškodzovanie životného prostredia | PRIEMYSEL | právo Európskej únie | recyklácia odpadu | rozšírená zodpovednosť výrobcu | textilný priemysel | trvalo udržateľný rozvoj | ŽIVOTNÉ PROSTREDIE

Zhrnutie Every year, 60 million tonnes of food waste and 12.6 million tonnes of textile waste are generated in the EU. On 5 July 2023, the European Commission tabled a proposal for a targeted revision of EU waste rules. Seeking to accelerate the EU's progress towards United Nations Sustainable Development Goal 12.3 (halving food waste at the retail and consumer level by 2030), the proposal would mean EU countries would have to reduce food waste by 10 % in processing and manufacturing, and by 30 % per capita, jointly at retail and consumption level, by 2030. The proposal also introduces extended producer responsibility requirements for the textiles sector. These schemes would have to cover the costs of collecting textiles, shoes and textile-related products for re-use or recycling, along with transport and sorting, as well as supporting research and development to improve the sorting and recycling processes. The proposal attracted a mixed response. While non-governmental organisations criticised the lack of ambition in the binding targets, farm lobbies expressed satisfaction with the derogation for the primary sector. In the European Parliament, the Committee on the Environment, Public Health and Food Safety (ENVI) is responsible for the file under the co-decision procedure, with Anna Zalewska (ECR, Poland) as rapporteur. The draft report was presented in committee on 24 October 2023. First edition. The 'EU Legislation in Progress' briefings are updated at key stages throughout the legislative procedure.

Briefing [EN](#)

[Circularity requirements for vehicle design and management of end-of-life vehicles](#)

Typ publikácie Briefing

Dátum 01-12-2023

Autor RAGONNAUD Guillaume

Oblast' politiky Priemysel | Životné prostredie

Kľúčové slovo automobilový priemysel | dizajn výrobku | DOPRAVA | ekologická politika | ekologický dosah | EKONOMIKA | EURÓPSKA UNIA | homologácia | hospodárska politika | návrh (EÚ) | obehové hospodárstvo | organizácia dopravy | PRIEMYSEL | právo Európskej únie | recyklácia odpadu | rozšírená zodpovednosť výrobcu | strojárenstvo | technológia a technické predpisy | vozidlo | VÝROBA, TECHNOLÓGIA A VÝSKUM | čistá technológia | ŽIVOTNÉ PROSTREDIE

Zhrnutie The EU's automotive sector is resource-intensive. There are 286 million motor vehicles on the road in the EU, and every year around 6.5 million vehicles become waste. If improperly managed, these vehicles may cause environmental damage and the economy may lose millions of tonnes of materials. Ensuring better sustainability and circularity of the European automotive sector would help to achieve the goals of the EU Green Deal, improve the competitiveness of the sector, and reinforce the EU's strategic autonomy. In July 2023, the European Commission presented a proposal for a regulation addressing the whole life cycle of vehicles, from design to end-of-life, aimed at improving design and end-of-life management of vehicles for a more resource-efficient automotive sector. It would set circularity requirements on vehicle design and production concerning reusability, recyclability, recoverability and the use of recycled content. It would also lay down requirements on information and labelling of parts, components and materials in vehicles. In addition, the proposed regulation would establish requirements on extended producer responsibility, collection and treatment of end-of-life vehicles, and on the export of used vehicles from the EU to third countries. The proposal is now in the hands of the co-legislators. In the European Parliament, the Committee on Environment, Public Health and Food Safety (ENVI) is responsible for the file. First edition. The 'EU Legislation in Progress' briefings are updated at key stages throughout the legislative procedure.

[Cohesion policy and climate change. Actions taken by regional and local authorities](#)

Typ publikácie Briefing

Dátum 21-11-2023

Autor D'AMBROGIO Enrico

Oblast' politiky Regionálny rozvoj

Kľúčové slovo budovanie Európy | ekologická politika | environmentálna politika EÚ | EURÓPSKA ÚNIA | hospodárska a sociálna súdržnosť | Prispôsobovanie sa zmene klímy | recyklácia odpadu | uhlíková neutralita | ŽIVOTNÉ PROSTREDIE

Zhrnutie The European Parliament has underlined the need to involve the regional and local levels of government in efforts to ensure that the adaptation goal of the Paris Agreement – which provides a framework for global action to address climate change post-2020 – is met. A number of initiatives have been put in place to support regions, cities, and local authorities in their efforts to align with the EU's transition to climate neutrality. Examples of these initiatives include the Covenant of Mayors for climate and energy, the 'EU Mission: Climate-Neutral and Smart Cities', and the 'EU Mission: Adaptation to Climate Change', all promoted by the European Commission. The Commission has also created the EU Green Capital and the EU Green Leaf Awards. The European Committee of the Regions launched the 'Green Deal Going Local' initiative and founded the Automotive Regions Alliance. EU cities and regions are taking action towards decarbonisation in order to make the EU economy more resource-efficient, to innovate on waste management and recycling, to support citizens for both new construction and renovation, to make transport greener, to increase green spaces and plant presence in urban areas, and to raise citizens' awareness of the need to do more to fight climate change. This briefing showcases 20 such projects across the European Union.

[Briefing EN](#)

[Revision of the Waste Framework Directive](#)

Typ publikácie Briefing

Dátum 23-10-2023

Autor RAKSTELYTE AUSRA

Kľúčové slovo ekologická politika | recyklácia odpadu | ŽIVOTNÉ PROSTREDIE

Zhrnutie The IA supports the revision of the Waste Framework Directive (WFD), which lays down the basic definitions and concepts for waste management. The proposal focuses on two resource-intensive sectors – textiles and food – and aims to contribute to the European Green Deal ambitions of reducing waste generation and transitioning to a circular economy. The IA includes two separate impact assessments – one for textiles and one for food – published in a single document. The IA analyses the economic, environmental and social impacts of the policy options, as well as impacts on competitiveness, SMEs and third countries. For textiles, it chooses the preferred policy option on the basis of consideration of how it contributes to the objectives of the initiative and on the balance between the impacts. For food, the preferred option is chosen, inter alia, on the basis of its feasibility. The main IA report does not address the proportionality issues of the preferred option for textiles, but the proposal is accompanied by a subsidiarity grid covering both food and textiles. The range of stakeholders consulted was wide and relevant, included SMEs and all affected stakeholders, and the findings are broken down into categories by stakeholder and problem. The stakeholders' views were taken into account for the design of POs, the evaluation of impacts and the choice of the preferred option. The IA was based on recent, referenced and reliable data, as well as models, and was transparent on their limits. It takes into account the future projections for both textiles and food consumption and waste. The main supporting study for the IA and the JRC study, which is also the main basis for the quantitative analysis, are not however publicly available at the time of writing. The proposal is mostly coherent with the preferred options and monitoring provisions identified in the IA, but both the proposal and the IA remain vague on the evaluation. The IA is sufficiently comprehensive, however the information is often spread out and difficult to trace over multiple annexes. This does not appear to respect the BRG requirement that the main report, limited to 40 pages, should strike the right balance between the information in the report and that in the annexes, keeping in mind the need for a focused, self-standing report. Overall, this makes the IA report less transparent and less legible.

[Briefing EN](#)

[Packaging and packaging waste](#)

Typ publikácie Briefing

Dátum 29-03-2023

Autor TUOMINEN ULLA-MARI

Oblast' politiky Životné prostredie

Kľúčové slovo analýza dosahu | balenie | chémia | ekologická norma | ekologická politika | ekonomická analýza | EKONOMIKA | EURÓPSKA ÚNIA | harmonizácia norem | hospodárska politika | marketing | návrh (EÚ) | OBCHOD | obehové hospodárstvo | plastový odpad | plasty | poškodzovanie životného prostredia | PRIEMYSEL | priemyselné štruktúry a politika | právo Európskej únie | recyklovaný produkt | recyklácia odpadu | technológia a technické predpisy | udržateľný výrobok | VÝROBA, TECHNOLÓGIA A VÝSKUM | ŽIVOTNÉ PROSTREDIE

Zhrnutie The IA provides a good overview of the problems relating to packaging and packaging waste, and the possible impacts of the various measures proposed to address the problems. In its assessment, which is both qualitative and quantitative, the IA relies on a wealth of data sources and modelling. However, it does not clearly indicate the IA supporting studies and their full references; this would have improved transparency. The IA presents three policy options, which are partially incremental and cannot therefore serve as self-standing alternatives. The IA provides sufficient justification for the preferred option. Broad stakeholder consultations were carried out and the IA presents stakeholders' views, although on individual measures rather than on the three policy options. The description of the monitoring and evaluation plan is rather limited; for example, the operational objectives and the timeframe for the evaluation are not explained. On a technical point, the IA could have made more use of the material from the extensive annexes, for example, to describe the policy options and the third problem in more detail in the main text.

Oblast' politiky Posudzovanie vplyvu ex-ante | Vnútorný trh a colná únia

Kľúčové slovo analýza dosahu | budovanie Európy | ekodizajn | ekologická politika | ekologický dosah | ekonomická analýza | EKONOMIKA | energetická efektívnosť | energetická politika | ENERGIA | EUROPASKA ÚNIA | hospodárska politika | návrh (EÚ) | OBCHOD | obehové hospodárstvo | právo Európskej únie | recyklácia odpadu | spotreba | technológia a technické predpisy | udržateľný výrobok | vnútorný trh | výroba | VÝROBA, TECHNOLOGIA A VÝSKUM | údržba | životnosť výrobku | ŽIVOTNÉ PROSTREDIE

Zhrnutie This briefing provides an initial analysis of the strengths and weaknesses of the European Commission's impact assessment (IA) accompanying the above-mentioned proposal, submitted on 30 March 2022 and referred to the European Parliament's Committee on Environment, Public Health and Food Safety (ENVI). The proposal aims to repeal the Ecodesign Directive 2009/125/EC, which establishes a framework for adopting product-specific requirements set out in implementing measures (usually regulations) by the European Commission. Until recently, the directive focused mainly on the energy efficiency of products and since 2019 also on their lifetime (e.g. availability of spare parts for a certain number of years after the last item has been placed on the market). It currently covers 29 energy-related product groups, ranging from ventilation systems to high-pressure cleaners. The new proposal for a Regulation would establish a framework for setting Ecodesign requirements that would apply to all physical products on the internal market (with a few exceptions), with the aim of making them more durable, reusable, reparable, upgradeable, recyclable and generally less harmful to the environment. Product specific requirements would be set out later, in delegated acts, for each product group separately. The proposal was first announced in the European Green Deal, and then confirmed in the Circular Economy action plan, alongside a communication on making sustainable products the norm and a proposal for a directive empowering consumers for the green transition. The Commission included the present proposal in Annex I of its 2021 work programme (new initiatives) and the 2022 joint declaration on legislative priorities.

Zhrnutie The steel sector is one of the most challenging sectors to decarbonise and has recently received special attention owing to the potential use of low-carbon hydrogen (green and blue) to reduce its fuel combustion and process-related carbon emissions. This report addresses concerns that might arise while evaluating the potential and limitations of the future role of hydrogen in decarbonising the iron and steel industries. The report provides a comprehensive overview of current technical knowledge, (pilot) projects and road maps at national and EU level. This information is supplemented by previously published indicative price projections for the various steel production routes and a long-term study, analysing the evolution of the global steel sector up until 2100.

Oblast' politiky Hospodárske a menové veci

Kľúčové slovo ekologická politika | ekonomická analýza | EKONOMIKA | hospodárska politika | marketing | OBCHOD | obehové hospodárstvo | odpad | poškodzovanie životného prostredia | recyklácia odpadu | technológia a technické predpisy | trh práce | trvalo udržateľný rozvoj | vytvorenie pracovného miesta | VÝROBA, TECHNOLÓGIA A VÝSKUM | ZAMESTNANIE A PRACOVNÉ PODMIENKY | zamestnanosť | čistá technológia | štatistika EÚ | štatistika obchodu | štatistika zamestnanosti | ŽIVOTNÉ PROSTREDIE | „zelene“ hospodárstvo

Zhrnutie Circular economy is a production and consumption model that involves reusing, repairing, refurbishing and recycling existing materials and products to keep materials within the economy. It implies that waste becomes a resource, consequently minimising the actual amount of waste. The circular model is generally the antithesis of a traditional, linear economic model, which is based on a 'take-make-consume-throw away' pattern. This paper looks at the job creation potential and added value produced by the circular economy and illustrates the generation and treatment of waste in the EU.

Oblast' politiky Hodnotenie práva a politiky v praxi | Petície Európskemu parlamentu | Verejné zdravie | Životné prostredie

Kľúčové slovo chémia | ekologická politika | ekologický dosah | EKONOMIKA | hospodárska politika | obehové hospodárstvo | ochrana životného prostredia | plastový odpad | plasty | poškodzovanie životného prostredia | PRIEMYSEL | recyklácia odpadu | ŽIVOTNÉ PROSTREDIE

Zhrnutie This study, commissioned by the European Parliament's Policy Department for Citizens' Rights and Constitutional Affairs at the request of the Committee on Petitions (PETI), focuses on the pervasive use of plastics and reviews the rising consensus on the potential eco-toxicological impacts of these materials, in particular of smaller plastic particles, dubbed microplastics. It discusses possible mitigation strategies aimed at curtailing the prevalence of (micro)plastics, as well as emerging alternatives and their environmental adequacy. Propelled by increasing awareness of the impacts of plastics and by public opinion, in recent years a multitude of norms, regulations, laws and recommendations have been proposed and/or implemented. These vary greatly across local, national, regional and international levels, and it is not clear what the beneficial impacts of these tools are. This study assesses these existing instruments, analyses whether they are based on sound scientific data, and discusses foreseeable challenges that could restrain the relevance and suitability of existing and future legislative proposals.

[EU fertilising products](#)

Typ publikácie Briefing

Dátum 26-06-2019

Autor HALLEUX Vivienne

Oblast' politiky Ochrana spotrebiteľa | Poľnohospodárstvo a rozvoj vidieka | Prijímanie právnych predpisov EP a Radou | Verejné zdravie | Vnútorný trh a colná únia

Kľúčové slovo chémia | ekologická norma | ekologická politika | EURÓPSKA ÚNIA | hnojivo | hutníctvo železa, ocele a železných kovov | kadmium | marketing | OBCHOD | obrábanie poľnohospodárskej pôdy | označenie zhody CE | povolenie na predaj | POĽNOHOSPODÁRSTVO, LESNÍCTVO A RYBÁRSTVO | PRIEMYSEL | priemysel hnojiv | prostriedky poľnohospodárskej výroby | právo Európskej únie | recyklácia odpadu | technológia a technické predpisy | tvorba práva EÚ | VÝROBA, TECHNOLOGIA A VÝSKUM | zlepšovanie pôdy | ŽIVOTNÉ PROSTREDIE

Zhrnutie Fertilising products are used to improve plant growth, mainly in agriculture, enabling higher crop yields. However, they are associated with some challenges as regards security of supply, the environment and health. Although the 2003 Fertilisers Regulation, which aimed at ensuring an internal market in fertilisers, has been effective, it mainly addresses mineral fertilisers and deters the introduction of new types of fertilisers. In March 2016, the Commission put forward a legislative proposal on fertilising products, as announced in the circular economy action plan. The proposal modernises the conformity assessment and market surveillance in line with the 'new legislative framework' for product legislation, covers a wider range of fertilising products (including those manufactured from secondary raw materials), and sets limits for the presence of heavy metals and contaminants in fertilising products. After completion of the legislative procedure, the final act was signed on 5 June 2019. The regulation will apply in full from 16 July 2022. Fifth edition of a briefing originally drafted by Didier Bourguignon. The 'EU Legislation in Progress' briefings are updated at key stages throughout the legislative procedure. Please note this document has been designed for on-line viewing.

Zhrnutie Although waste management in the EU has improved considerably in recent decades, over a quarter of municipal waste is still landfilled and less than half is recycled or composted, with wide variations between Member States. Improving waste management could deliver positive effects for the environment, climate, human health and the economy. As part of a shift towards a circular economy, the European Commission made four legislative proposals introducing new waste-management targets regarding reuse, recycling and landfilling, strengthening provisions on waste prevention and extended producer responsibility, and streamlining definitions, reporting obligations and calculation methods for targets. After completion of the legislative procedure, the final acts were signed on 30 May 2018. Member States are required to transpose the directives into national law by 5 July 2020. This updates an earlier edition, of March 2018: PE 614.766.

Improving waste management could deliver positive effects for the environment, climate, human health and the economy. As part of a shift towards a circular economy, the European Commission made four legislative proposals introducing new waste-management targets regarding reuse, recycling and landfilling, strengthening provisions on waste prevention and extended producer responsibility, and streamlining definitions, reporting obligations and calculation methods for targets. The agreement reached by Council and Parliament is to be submitted for a vote in plenary in spring 2018. This updates an earlier edition, of May 2017: PE 603.954. Oblast' politiky Petície Európskemu parlamentu

Kľúčové slovo budovanie Európy | ekologická politika | ESAE | EURÓPSKA ÚNIA | európsky parlamentný výbor | inštitúcie EÚ a európska verejná služba | ochrana životného prostredia | parlament | petícia | POLITIKA | poškodzovanie životného prostredia | prevencia proti znečisťovaniu | právo Európskej únie | recyklácia odpadu | rádioaktívny odpad | SOCIÁLNE OTÁZKY | uskladnenie odpadu | zdravie | zdravie verejnosti | Zmluva o ESAE | ŽIVOTNÉ PROSTREDIE

Zhrnutie This study, commissioned by the European Parliament's Policy Department for Citizens' Rights and Constitutional Affairs at the request of the PETI Committee examines the application and proper transposition of European environmental law on waste by Member States, that is one of the recurrent topics addressed by the Committee on Petitions, which collects complaints from citizens in this matter and call for respect of the rule of law. Waste management concerns all activities and actions that are required to manage waste, from its generation to its final disposal. This includes the collection, transport, treatment and disposal of waste, together with monitoring and regulation. This study is an updated version of the previous research from 2011. Based on the results from 2011, new petitions from 2013 to 2016 were analysed with the aim to update the main findings and recommendations on the crucial areas of complaints. The results of the recently carried out assessment show that most of the analysed petitions still relate to deficits in the waste management system, the operating of existing installations (mainly landfills) and the permitting procedure for new facilities. In addition, two petitions address the improper management of radioactive waste which constitutes a new area of complaint (EURATOM Treaty) compared to the analysis in 2011. For all the main areas covered, best practice examples and recommendations for better approaches in future were updated and reviewed.

Oblast' politiky Doprava | Hodnotenie práva a politiky v praxi

Kľúčové slovo DOPRAVA | dopravná infraštruktúra | dopravná politika | druh dopravy | ekologická politika | ekologický dosah | ekonomická analýza | EKONOMIKA | elektrická energia | elektrické vozidlo | elektrárenský a jadrový priemysel | energetická efektívnosť | energetická politika | ENERGIA | nebezpečný odpad | organizácia dopravy | poškodzovanie životného prostredia | recykláčna technológia | recyklácia odpadu | technológia a technické predpisy | trvalo udržateľná mobilita | uhoľný a ľažobný priemysel | VÝROBA, TECHNOLÓGIA A VÝSKUM | znižovanie emisií plynov | štatistika EÚ | ľažobné dobývanie | ŽIVOTNÉ PROSTREDIE

Zhrnutie As 2018 gets under way, there are probably more than three million electric cars in circulation in the world. There are also more than six hundred million electric bikes, scooters and motorcycles. Plus a few hundred thousand electric buses and other types of quadricycles having an electric motor. The first part of this paper traces the fast evolving market of electric road vehicles. The second part shows that the production of hundreds of millions of battery packs requires a lot of energy and plenty of scarce resources, which affects the real impact of electric vehicles on the climate and the environment and make it necessary to consider the recovery and recycling of used batteries.

Zhrnutie Dôsledkom súčasných i predchádzajúcich spôsobov využívania zdrojov je vysoká úroveň znečistenia, zhoršovanie kvality životného prostredia a vyčerpávanie prírodných zdrojov. Tento trend by mal zvrátiť plán pre Európu efektívne využívajúcu zdroje a balík pre obehové hospodárstvo transformovaním hospodárstva EÚ na trvalo udržateľné hospodárstvo do roku 2050. Politika EÚ v oblasti odpadu má dlhú história a tradične sa zameriava na odpadové hospodárstvo, ktoré je udržateľnejšie z hľadiska životného prostredia. Štyri legislatívne návrhy o odpade v rámci nového balíka opatrení pre obehové hospodárstvo zavedú nové ciele nakladania s odpadom v oblasti prevencie, opäťovného využívania, recyklácie a skládkovania.

Oblast' politiky Prijímanie právnych predpisov EP a Radou | Životné prostredie

Kľúčové slovo budovanie Európy | ekologická politika | EKONOMIKA | EURÓPSKA ÚNIA | hospodárska a sociálna súdržnosť | hospodárska politika | inštitúcie EÚ a európska verejná služba | medzinárodná politika | MEDZINÁRODNÉ VZŤAHY | nový ekonomický poriadok | obehové hospodárstvo | odpadové hospodárstvo | organizácia EÚ | program EÚ | právo Európskej únie | právo EÚ | recyklácia odpadu | regionálna nerovnováha | regióny a regionálna politika | vytvorenie pracovného miesta | ZAMESTNANIE A PRACOVNÉ PODMIENKY | zamestnanosť | znevýhodnený región | ŽIVOTNE PROSTREDIE

Zhrnutie Although waste management in the EU has improved considerably in recent decades, over a quarter of municipal waste is still landfilled and less than half is recycled or composted, with wide variations between Member States. Improving waste management could deliver positive effects for the environment, climate, human health and the economy. As part of a shift towards a circular economy, the European Commission made four legislative proposals introducing new waste-management targets regarding reuse, recycling and landfilling, strengthening provisions on waste prevention and extended producer responsibility, and streamlining definitions, reporting obligations and calculation methods for targets. This briefing updates an earlier edition, of February 2017; PE 599.288.

Briefing [EN](#)

[Plastics in a circular economy: Opportunities and challenges](#)

Typ publikácie Briefing

Dátum 17-05-2017

Autor BOURGUIGNON Didier

Oblast' politiky Životné prostredie

Kľúčové slovo biologická rozložiteľnosť | chémia | ekologická politika | EKONOMIKA | EURÓPSKA ÚNIA | hospodárska politika | marketing | MEDZINÁRODNÉ VZŤAHY | obalový materiál | obchod | OBCHOD | obehové hospodárstvo | odpadové hospodárstvo | plasty | politika spolupráce | PRIEMYSEL | právo Európskej únie | právo EÚ | recyklácia odpadu | tretia krajina | trvalo udržateľný rozvoj | vývoz (EÚ) | ŽIVOTNE PROSTREDIE

Zhrnutie Plastics pervade modern life; plastics production has been growing exponentially since the 1960s and is expected to double by 2036. Although there are over 1 000 types of plastic, 90 % of plastics are derived from virgin fossil fuels. In Europe, post-consumer plastic waste is either incinerated with energy recovery (39 %), landfilled (31 %) or recycled (30%). It is estimated that half of the plastic waste recycled is treated in the EU, while the other half is exported for recycling. The production and consumption of plastics today offer a series of benefits (in particular low production costs, durability and versatility) but also pose a number of problems (in particular loss of material value as a result of single use and low recycling rates, as well as ill-effects on nature, climate and human health). Marine litter and microplastics are a source of particular concern. Several pieces of EU legislation apply to plastics and plastic waste, although implementation is incomplete. In 2015, the Commission identified plastics as one of the priority areas of the circular economy action plan, proposed new reuse and recycling targets for plastic packaging waste and pledged to adopt a strategy on plastics in the circular economy by the end of 2017. A circular economy implies reducing waste to a minimum. Moving the plastics value chain in this direction would mean improving recycling, promoting reuse, and redesigning products, while taking into account the whole life-cycle of products. Although this could deliver opportunities (in particular enhanced security of supply, economic benefits and reduced pressure on the environment) there are also challenges (in particular weak economic incentives, technical issues and finance). The European Parliament recognises the need to introduce specific measures on plastic waste in EU legislation and to value plastics as a resource.

Zhrnutie This briefing reviews Estonia's progress in the transition to a circular economy, focusing on three crucial and related policy areas: waste, renewable energy and sustainable bioenergy. A key challenge for Estonia in terms of moving to a circular economy will be to strengthen recycling, as well as high rates of separate collection in cities including Tallinn – Estonia is not on track to meet the EU's 2020 targets for municipal solid waste recycling. • The share of renewable energy has increased strongly in the past ten years, due mainly to a growth in wind power and biomass, which is used for household heating and for district heating. The intensity of forest use is among the highest in the EU. As a large share of Estonian forests will reach maturity in coming years, Estonia has the capacity to extract greater levels of biomass.

Zhrnutie The IA defines in a clear way the problems and the objectives of the proposed initiative, and is based on extensive research conducted by external contractors. However, it omits to explain the sequential process and the underlying assumptions leading to the identification of the four problems analysed, mentioning only the supporting studies. Also, it contains some discrepancies with respect to the supporting studies in terms of terminology and recommendations which are not explained in the IA. A broad range of stakeholders provided valuable data and information that were used in the IA, even though only 40 (out of 300) provided comments and suggestions. The IA seems to make a reasonable case for the preferred options, which are reflected in the legislative proposal, intending to amend four articles of RoHS 2. However, one of these amendments has been proposed without a clear explanation being provided in the IA. The analysis of competitiveness of SMEs appears to be, in general, insufficiently developed or explained.

Zhrnutie Synthetic biology is a new dimension of modern biotechnology with the potential to design and manufacture living organisms, components and products. It will be on the agenda of the 13th meeting of the Conference of the Parties (COP) of the United Nations Convention on Biological Diversity (CBD), to be held from 4 to 17 December 2016, in Cancún, Mexico. Synthetic biology could provide novel solutions for environmental and biodiversity-related issues, but could also have an adverse impact on the natural environment. The European Union is party to the CBD and the protocols relevant in the context of synthetic biology.

[EU Heating and Cooling Strategy: A path to decarbonising homes and industry](#)

Typ publikácie Briefing
Dátum 11-05-2016
Autor SAJN Nikolina
Oblast' politiky Energetika | Priemysel | Životné prostredie
Kľúčové slovo alternatívna energia | biomasa | budova | ekologická politika | energetická politika | ENERGIA | medzispotreba | náhrada energie | OBCHOD | obnoviteľná energia | pozemné a inžinierske stavby | PRIEMYSEL | recyklácia odpadu | spotreba | technológia a technické predpisy | vykurovanie | VÝROBA, TECHNOLOGIA A VÝSKUM | znížovanie emisií plynov | ŽIVOTNÉ PROSTREDIE

Zhrnutie The EU Heating and Cooling Strategy, which is part of the European Commission's Sustainable Energy Security Package, presents a vision for an EU which has decarbonised buildings and industry, maximises the use of energy released from waste heat and cold in industry, and encourages district heating. Although the strategy does not announce any new legislative proposals, it presents some steps the European Commission may consider in the process of revising existing energy legislation, both to improve implementation and to align it with 2030 climate and energy targets. The Commission has announced it would look to improve the financing of building stock renovations and simplify improvements in rented apartments and multi-apartment buildings. The Commission suggests industry could achieve efficiency gains of 4-10% with existing technologies, but does not introduce any binding targets. However, according to its vision, surplus heat and cold from industrial processes would in future be reused in district heating and cooling systems, with a special contribution from cogeneration plants producing heat and power in a highly energy-efficient process. Today, biomass is the most widely used renewable source for heating in all sectors, yet its use is not problem-free. Furthermore, some stakeholders question the economic feasibility of investing in new district and cooling systems, while others point to inconsistencies between the Heating and Cooling Strategy and the Energy Security Package in its sections referring to the security of gas supply.

Briefing [EN](#)

Planned obsolescence: Exploring the issue

Typ publikácie Briefing

Dátum 02-05-2016

Autor VALANT Jana

Oblast' politiky Hospodárske a menové veci | Ochrana spotrebiteľa | Priemysel | Životné prostredie

Kľúčové slovo dizajn výrobku | domáce elektrické spotrebiče | ekologická politika | elektronický odpad | elektronika a elektrotechnika | etika podnikania | komunikácia | mobilný telefón | OBCHOD | občianske právo | organizácia podniku | PODNIKANIE A SUTAZ | poškodzovanie životného prostredia | PRIEMYSEL | PRÁVO | recyklácia odpadu | spotreba | technológia a technické predpisy | VZDELANIE A KOMUNIKÁCIE | VÝROBA, TECHNOLÓGIA A VÝSKUM | zodpovednosť výrobcu | životnosť výrobku | ŽIVOTNÉ PROSTREDIE

Zhrnutie Although no overarching definition of planned obsolescence exists, the term 'planned obsolescence' (of products or technology) is described as the intentional production of goods and services with short economic lives, stimulating consumers to repeat purchases too frequently. The incandescent light bulb with an engineered shorter lifespan (the Phoebeus cartel case) is one example from the past of proven planned obsolescence. Data suggest that the median lifespans of certain categories of product have been shortening, and consumer organisations have drawn attention to more recent suspected cases of planned obsolescence in connection with washing machines, inkjet cartridges, electronic devices, etc. One Member State – France – recently introduced a definition of planned obsolescence into its legislation, making it a punishable offence. No specific EU rules mention planned obsolescence, but the subject ties in with EU legislation on ecodesign, waste, use of natural resources, consumer information and the new package from the European Commission on the circular economy. The main consumer concerns and problematic strategies associated with the issue are: design features that do not allow repair, upgradability or interoperability with other devices; the unavailability of spare parts and high repair costs; and marketing strategies pushing consumers to buy new, fashionable products and replace existing ones very quickly. Various ways to curb the practice of planned obsolescence have been proposed, not least a shift towards a culture that values product durability and sustainability.

EYE 2016 – 360° strategy: Moving things around in a circle

Typ publikácie V stručnosti

Dátum 28-04-2016

Autor BOURGUIGNON Didier

Oblast' politiky Životné prostredie

Kľúčové slovo akcia EÚ | akčný program | bezpečnosť dodávky | budovanie Európy | ekologická politika | ekonomický nástroj ochrany životného prostredia | EKONOMIKA | EURÓPSKA ÚNIA | hospodárska politika | manažment | obchod | OBCHOD | PODNIKANIE A SÚŤAŽ | recyklácia odpadu | spotreba | spotrebiteľské správanie | trvalo udržateľný rozvoj | životnosť výrobku | ŽIVOTNÉ PROSTREDIE

Zhrnutie Unlike a traditional linear economy based on a 'take-make-consume-throw away' pattern, a circular economy is based on sharing, leasing, reusing, repairing, refurbishing and recycling in an almost closed loop. Moving towards a circular economy could deliver benefits but also poses challenges. In 2015, the European Commission presented a circular economy package seeking to enable a transition to this new model, in particular by updating EU waste policy. This note has been prepared for the European Youth Event, taking place in Strasbourg in May 2016. Please click here for the full publication in PDF format

V stručnosti [EN](#)

Review of the EU waste management targets - 'Circular Economy Package': Initial Appraisal of a European Commission Impact Assessment

Typ publikácie Briefing

Dátum 01-02-2016

Autor DOSSI Samuele

Oblast' politiky Posudzovanie vplyvu ex-ante | Životné prostredie

Kľúčové slovo analýza dosahu | analýza nákladov a výnosov | ekologická politika | ekonomická analýza | EKONOMIKA | EURÓPSKA ÚNIA | komunikácia | PODNIKANIE A SÚŤAŽ | pramene a odvetvia práva | PRÁVO | právo Európskej únie | recyklácia odpadu | tvorba práva EÚ | verejné konzultácie | VZDELANIE A KOMUNIKÁCIE | zjednodušovanie legislatív | účtovníctvo | ŽIVOTNÉ PROSTREDIE

Zhrnutie The additional analysis accompanying the new 'Circular Economy package' goes a considerable way towards addressing some of the concerns previously voiced with regard to waste targets in the context of the original IA and legislative proposal, especially the criticisms regarding the apparent failure to take sufficient account of the different situations of the Member States and their capacity to perform in the future. It provides further evidence of the possible impacts of new waste targets by considering a number of alternatives to one of the original options (option 3), and by presenting the results of an updated application of the model used for the original impact assessment. In particular, costs were updated to 2015 prices, and data on waste was drawn from the latest available Eurostat sources (2012). The use of sensitivity analysis (carried out on the main input parameters used in the model, e.g. efficiency of the collection system, material losses and revenues, etc.) is another welcome indication of the desire to provide a realistic assessment of the likely impacts of the proposed measures. A clearer ranking of the options presented - and of their variants - might nevertheless have allowed for a more thorough appreciation of the potential impact (and benefits) of each of the new alternatives considered, as well as for a better understanding of the coherence between the new proposal and the overall impact assessment analysis. As mentioned, some questions concerning subsidiarity and proportionality - especially as to the issue of landfilling of waste - are left partially unaddressed. Finally, the analysis, though thorough, is clearly intentionally restricted to an exploration of the possible impacts generated by the new sets of waste targets. It does not seek to go further in 'exploring synergies with other policies' - one of the reasons set out in the April 2015 Roadmap, referred to above, for the withdrawal of the original proposal.

Zhrnutie Unlike the traditional linear economic model based on a 'take-make-consume-throw away' pattern, a circular economy is based on sharing, leasing, reuse, repair, refurbishment and recycling, in an (almost) closed loop, where products and the materials they contain are highly valued. In practice, it implies reducing waste to a minimum. Moving towards a more circular economy could deliver opportunities including reduced pressures on the environment; enhanced security of supply of raw materials; increased competitiveness; innovation; growth and jobs. However, the shift also poses challenges such as financing; key economic enablers; skills; consumer behaviour and business models; and multi-level governance. On 2 December 2015, the European Commission presented a new circular economy package. The package contains an action plan for the circular economy, mapping out a series of actions planned for the coming years, as well as four legislative proposals on waste, containing targets for landfill, reuse and recycling, to be met by 2030. The European Parliament advocates specific measures to improve waste management and to promote eco-innovation and resource efficiency. Stakeholders, however, voice diverging views on the proposed circular economy package. Please click here for the full publication in PDF format

Zhrnutie A shift towards a circular economy could deliver environmental and economic benefits. However, it faces a number of barriers and challenges. As the European Commission prepares its new proposal on the circular economy, due to be put forward by the end of 2015, Parliament is scheduled to vote on a strategic report on the topic during the July part-session.

Kľúčové slovo ekologická politika | ekologický dosah | ekonomická analýza | ekonomická geografia | EKONOMIKA | energetická politika | ENERGIA | EURÓPSKA ÚNIA | GEOGRAFIA | nariadenie ES | nebezpečný odpad | nahradna energie | odpad z domácností | poškodzovanie životného prostredia | prevencia proti znečisťovaniu | právo Európskej únie | recyklácia odpadu | smernica ES | uskladnenie odpadu | vývoz odpadu | zneškodňovanie odpadu | štatistika EÚ | štaty EÚ | ŽIVOTNÉ PROSTREDIE

Zhrnutie Five tonnes of waste per capita are generated every year in the European Union (EU), mostly from the construction and mining sectors, with municipal waste accounting for roughly 10% of the total. Although wide differences remain between Member States, recent trends in the treatment of municipal waste show a shift away from landfilling and an increase in the proportion of waste recycled. Management of waste can have adverse effects on the environment, climate and human health.

EU waste policy is built on a thematic strategy, a series of overarching directives, legal acts applying to specific waste streams, legal acts on specific installations, and implementing acts defining when specific materials leave the waste regime after treatment. Various targets set out in EU legislation (in particular as regards recycling of household waste and landfilling of biodegradable waste) are being implemented at varying speed across Member States, regions and municipalities. Regional and local policies have a significant influence on waste recycling rates. Despite this legislation, illegal waste shipments remain a concern.

Waste management requires facing a number of challenging issues, for instance, balancing objectives between promoting recycling and protecting consumers against harmful chemical substances in recycled materials; insufficient data collection; quality aspects related to recycling; energy recovery of waste; and waste prevention. The opportunities relate mainly to a shift towards a more circular economy, with benefits for the environment and human health, as well as the economy.

The European Parliament has consistently called for policies in line with the hierarchy of waste prevention and management options, and moving towards a more circular economy.

[Resource Efficiency Indicators](#)

Typ publikácie Štúdia

Dátum 02-06-2015

Externý autor Hubert Reisinger, Maria Tesar and Brigitte Read

Oblast' politiky Energetika | Predbežné plánovanie | Priemysel | Životné prostredie

Klúčové slovo ekologická politika | ekologický dosah | EKONOMIKA | environmentálny indikátor | hospodárenie so zdrojmi | hospodárska politika | hospodárska situácia | hospodársky rast | obrábanie poľnohospodárskej pôdy | POĽNOHOSPODARSTVO, LESNICTVO A RYBARSTVO | prírodné prostredie | prírodné zdroje | recyklácia odpadu | spracovanie vody | trvalo udržateľný rozvoj | využitie pôdy | ŽIVOTNE PROSTREDIE

Zhrnutie This report summarises the presentations and discussions during the Workshop on Resource Efficiency Indicators held on 14 April 2015.

There was general agreement that world economic growth will soon be limited by the earth's carrying capacity. In order to have a system for steering the necessary policy measures a set of resource efficiency indicators is needed. In this indicator set priority should be given to most needed indicators. In addition, footprint type indicators, which take into account indirect flows, are needed.

The workshop was organised by Policy Department A at the request of the European Parliament's Committee on the Environment, Public Health and Food Safety.

Oblast' politiky Priemysel | Výskumná politika

Klúčové slovo bezpečnosť dodávky | ekologická politika | ekologický dosah | elektronický odpad | malé a stredné podniky | MEDZINÁRODNÉ VZTAHY | nová technológia | náhradný produkt | obchod | OBCHOD | PODNIKANIE A SÚŤAŽ | politika spolupráce | poškodzovanie životného prostredia | PRIEMYSEL | priemyselná politika EÚ | priemyselné štruktúry a politika | recyklácia odpadu | technológia a technické predpisy | trielenie podnikov | vedecká spolupráca | VÝROBA, TECHNOLÓGIA A VÝSKUM | výskum a duševné vlastníctvo | výskum a vývoj | ŽIVOTNE PROSTREDIE

Zhrnutie This document was prepared on behalf of Policy Department A at the request of the Committee on Industry, Research and Energy. It reviews the current level of technology development for the recovery of rare earths from electronic waste and examines the parameters that affect its development at the industrial scale and the opportunities arising for high tech SMEs. It also reviews the existing policy framework and provides a set of recommendations for improved implementation of existing actions and new policy measures.

[Turning waste into a resource - Moving towards a 'circular economy'](#)

Typ publikácie Briefing

Dátum 12-12-2014

Autor BOURGUIGNON Didier

Oblast' politiky Životné prostredie

Klúčové slovo ekologická politika | EKONOMIKA | hospodárska politika | hospodárska situácia | hospodársky rast | PODNIKANIE A SÚŤAŽ | produktivita | recyklácia odpadu | spôsob produkcie | technologická zmena | technológia a technické predpisy | trvalo udržateľný rozvoj | výroba | VÝROBA, TECHNOLÓGIA A VÝSKUM | účtovníctvo | čistá technológia | ŽIVOTNE PROSTREDIE

Zhrnutie In a circular economy, unlike in a linear economy based on a 'take-make-consume-throw away' pattern, the materials contained within products are reused, turning waste into a valuable resource. Although businesses have started to use this model on specific products in various sectors, it has not yet been implemented on a large scale. In its communication on a circular economy presented in July 2014, the European Commission proposes to double the rate of increase in resource productivity by 2030. To achieve this, the European Commission considers a broad range of measures related to design and innovation, financing for resource efficiency, and awareness of businesses and consumers. A transition towards a more circular economy could have a number of benefits: enhancing the security of supply for raw materials; stimulating GDP growth; strengthening the competitiveness of businesses in the EU; and helping to protect the environment. However, there are also a number of barriers and challenges: moving towards circularity is a major change at a time of economic crisis; key enablers for the transition are still missing; significant discrepancies currently exist between Member States; and such a transition is a major multi-level governance challenge. The European Parliament has repeatedly stressed the need for a shift towards resource efficiency and eco-innovation. Many Member States have been critical of the Commission proposal even though some have already started moving towards a circular economy. For their part, stakeholders have expressed diverging views.

[Proceedings of the Workshop on "Plastic Waste"](#)

Typ publikácie Štúdia

Dátum 15-10-2013

Externý autor Thomas Weissenbach, Hubert Reisinger, Brigitte Read and Jürgen Schneider (Umweltbundesamt GmbH)

Oblast' politiky Životné prostredie

Kľúčové slovo boj proti plynaniu | chémia | ekologická politika | environmentálna politika EÚ | informácie pre spotrebiteľa | marketing | OBCHOD | odpad | označovanie etiketami | plasty | povolenie na predaj | poškodzovanie životného prostredia | PRIEMYSEL | priemyselné štruktúry a politika | recyklovaný produkt | recyklácia odpadu | spotreba | ŽIVOTNÉ PROSTREDIE

Zhrnutie This report summarises the presentations and discussions during the Workshop on Plastic Waste, held on 26 September 2013. The aim of the workshop was to allow an exchange of views between MEPs, the European Commission, stakeholders of the plastic and plastic waste treatment industry, NGOs, public administration and academia.

There is general agreement that plastic waste prevention is necessary, as is an increase of the recycling rates. Different ways to achieve these goals were discussed. These include better consumer information and labelling, a ban on materials which prevent recycling, improvement of separate plastic waste collection and sorting systems, a ban on the landfilling of waste with a high carbon content, and measures to make the recycling market more predictable, such as specific requirements for the use of recycled materials.

Oblast' politiky Bezpečnosť potravín | Poľnohospodárstvo a rozvoj vidieka | Výskumná politika | Životné prostredie

Kľúčové slovo alternatívna energia | bioenergia | biomasa | biomateriály | ekologická politika | EKONOMIKA | ENERGIA | environmentálna ekonomika | hospodárska politika | lesnícka politika | lesníctvo | obnoviteľné zdroje | potravinárska technológia | POTRAVINÁRSTVO | poľnohospodársky odpad | POL'NOHOSPODÁRSTVO, LESNÍCTVO A RYBÁRSTVO | poškodzovanie životného prostredia | prírodné prostredie | recyklácia odpadu | spracovanie potravín | technológia a technické predpisy | trvalo udržateľný rozvoj | VÝROBA, TECHNOLÓGIA A VÝSKUM | ŽIVOTNÉ PROSTREDIE

Zhrnutie The purpose of this study is to examine and review biorefinery technology options that exist to convert biomass in the form of agricultural crop and forestry residues and waste from the whole food chain into biomaterials and bioenergy. It assesses the technological options, including the sustainability of the processes involved. The study forms part of a bigger project commissioned by the European Parliament's STOA ('Science and Technology Options Assessment') office under the heading of 'Technology options for feeding 10 billion people'.

Advanced biofuels and innovative bio-based pathways based on wastes and residues show considerable potential and should be further developed especially as Europe is already seen by some as having a lead in relevant technologies. However, there are also considerable uncertainties for investors and indeed all market participants and thus a major task is to ensure good transparency and better information concerning the availabilities of the waste and residue streams, the opportunities for processing, and the benefits to consumers. In addition, because, by definition, bio-based economic developments necessarily interact with ecosystems, there has to be visible assurance that the bio-products are indeed environmentally preferable with respect to GHG emissions, water, soil and biodiversity compared with their fossil-based counterparts. The conclusion is thus encouragement should be given to this sector, but with enhanced transparency of all aspects of its development, and with equally strong sustainability safeguards.

[Rare earth elements and recycling possibilities](#)

Typ publikácie Briefing

Dátum 02-05-2013

Autor REMEUR Cécile

Oblast' politiky Medzinárodný obchod | Priemysel | Životné prostredie

Kľúčové slovo ekologická politika | ENERGIA | hutníctvo železa, ocele a železných kovov | metalurgický priemysel | nová technológia | PRIEMYSEL | recykláčna technológia | recyklácia odpadu | rudy železných kovov | spracovanie rudy | technológia a technické predpisy | uhoľný a tažobný priemysel | VÝROBA, TECHNOLÓGIA A VÝSKUM | čistá technológia | špeciálny kov | tažobná prevádzka | ŽIVOTNÉ PROSTREDIE

Zhrnutie Rare earth elements (REEs) are a group of 17 metallic elements mined in ores containing low quantities of REEs. They are a critical raw material for high-tech industries. REEs are imported into the European Union from a very limited number of producers. Alternatives to the primary supply of REEs are being developed to bring relief to the market. Recycling of REEs, from materials used in spent products, provides a secondary supply but closing the REE "life-cycle" is a technological challenge.

Zhrnutie Resource efficiency has rightly become a priority in the EU. Evidence indicates that using resources more efficiently reduces material costs for companies and also opens new business opportunities (e.g. recycling industry) and improves competitiveness. While a number of low-hanging fruit opportunities exist, improving the efficiency of the European macro-economic system will also require structural change. Resource efficiency indicators are required to set quantifiable targets and measure progress toward absolute decoupling and a green economy.

Kľúčové slovo biopalivo | cena komodity | ceny | ekologická politika | ekonomická analýza | EKONOMIKA | energetická efektívnosť | energetická politika | ENERGIA | FINANCIE | hospodárska situácia | hospodársky dôsledok | inflácia | medzinárodný obchod | nárast cien | OBCHOD | obchodovateľné povolenie na znečistenie | obmedzenie obchodu | palivo | recyklácia odpadu | ŽIVOTNÉ PROSTREDIE

Zhrnutie The study analyses the impact of high oil prices on the European economy and examines policy options to support adjustment. Following macroeconomic and sectoral effects, as well as the impact on the EU's overall trade balance, the study looks at economic responses to high oil prices with an emphasis on trade policy instruments. While the main policy responses aim at improving fuel efficiency, fuel substitution and recycling, trade policy has an important complementary role in supporting the overall objective of reducing the energy intensity of European industry through environmental standards, low or zero tariff on environmental goods and by enhancing the EU's adjustment potential. The study concludes that overall, the need and scope for trade policy responses to high oil prices is limited. Still, policies that facilitate the adjustment of European companies, encourage consumers to save energy while help secure long-term energy supplies, are worthy of consideration.

Zhrnutie The current waste framework Directive¹ (WFD) was originally adopted in 1975 and has been amended many times. In December 2005, the European Commission adopted the Thematic Strategy on waste prevention and recycling², which was accompanied by a proposal to amend the waste framework Directive (herein referred to as the DoW), which is fundamental to the implementation of many ideas put forward in the Strategy³. Annexed to both the Strategy and legislative proposal was an Impact Assessment⁴ of both the Thematic Strategy and its immediate implementing measures (IA). The proposed DoW would update the text of the WFD considerably, adding important new provisions and integrating requirements previously dealt with by the hazardous waste Directive⁵ (HWD) and the waste oils Directive⁶ (WOD). The proposed DoW would replace both of these Directives, as well as the WFD.

The aim of this report was to undertake an assessment for the European Parliament of the following two aspects of the proposed DoW:

- The IA of the proposed DoW; and
- Selected potential changes to hazardous waste law resulting from the integration of the HWD into the proposed DoW. These are addressed, respectively, in Part I and Part II of this report.
